

The following pages contain some question that will guide you to adding information to your Earth Space Science book you have made in Book Creator.

You will find the answers in the website or the interactive book.

1. What are non-renewable resources?
2. Give some examples of non-renewable resources
3. What are fossil fuels? Give some example
4. How are fossil fuels formed?
5. What are some negative impacts that fossil fuels have on the environment?
6. What gives us nuclear energy?

7. What are renewable resources?
8. Give some examples of renewable resources
9. What are 3 advantages of renewable resources?

10. Draw a venn diagram that shows the similarities and differences between renewable and non-renewable resources

11. Add a screen shot of this to your book

12. Find images of renewable and non-renewable resources. Make a pic collage for each type of resource. Add these to your book

13. Create an infographic to show how long it will take for resources to renew themselves.

First you will need to research how long it takes for these resources to renew themselves. Use this table to help you. You might need to add some more resources.

| RESOURCE Name     | How long does it take for these resources to renew themselves |
|-------------------|---|
| oil (NR)          |   |
| gas (NR)          |   |
| nuclear (NR)      |   |
| solar energy (R)  |   |
| add some more.... |   |
|                   |   |
|                   |   |

14. add the infographic to your book
