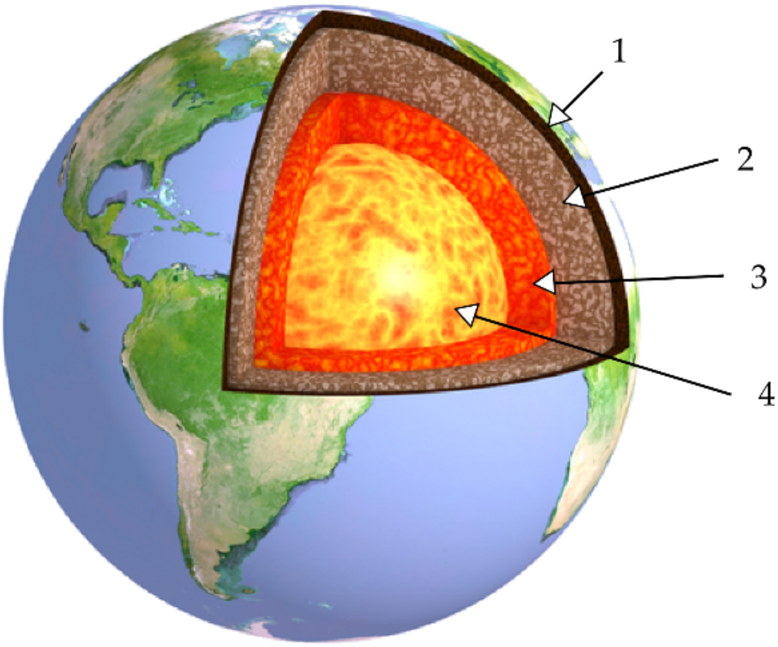
Select the **correct name of the layer of Earth** indicated by $\mathbf{3}$.

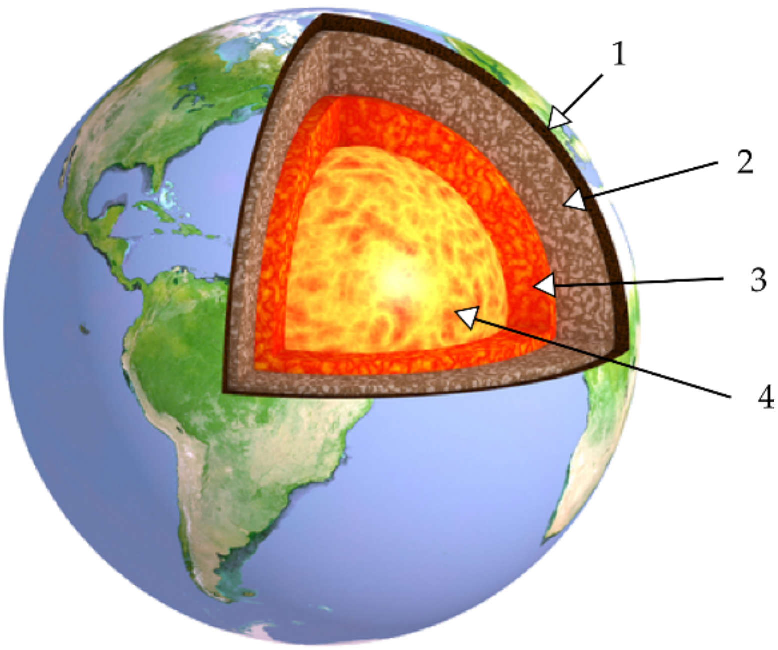
Hint: This layer is liquid.



- Crust 1
- Mantle 2
- Inner core 3
- Outer core 4

Select the **correct name of the layer of Earth** indicated by **1**.

Hint: This is where most of Earth's rock types are found.



- Crust 1
- Inner core 2
- Outer core 3
- Mantle 4

Which part of the Earth's core is solid?

- Inner core 1
- Outer core 2

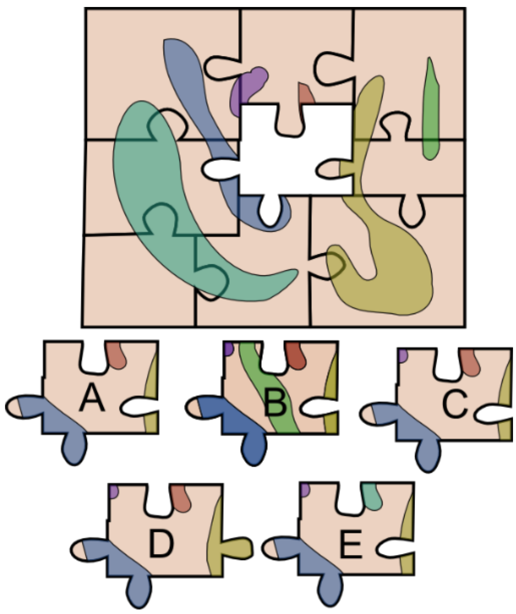
What is a fossil?

- A recently deceased plant or animal. 1
- A continent that drifts. 2
- Two continents that once fit together. 3
- The preserved remains of a plant or animal from the past. 4

Fossils of a single freshwater species called *Mesosaurus* have been found on the **west coast** of Africa and the **east coast** of South America.

What important implication does this have?

- This species was able to swim or fly from Africa to South America. 1
- The south coast of Africa and the north coast of South America were once connected. 2
- The west coast of Africa and east coast of South America were once connected. 3

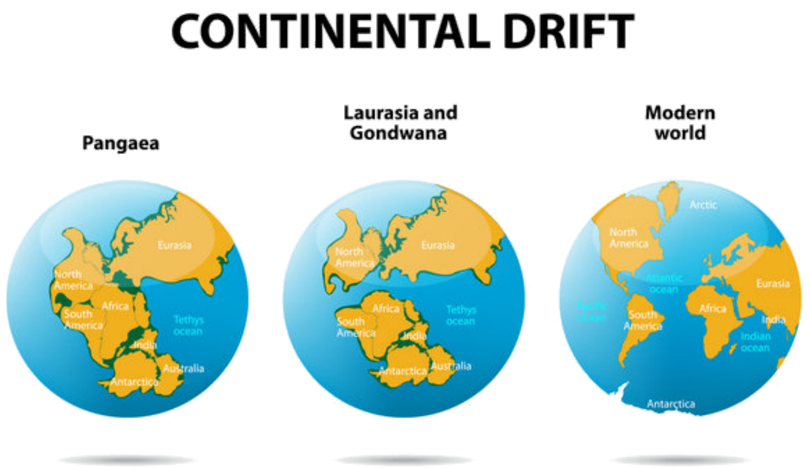


Pretend that the jigsaw pieces are the **continents** and the colours are where different species of fossils are found on the continents. **Which piece would fit into the blank space?**

- A 1
- B 2
- C 3
- D 4
- E 5

Who first proposed the theory of continental drift?

- Harry Hess 1
- James Hutton 2
- Alfred Wegener 3
- Mary Anning 4



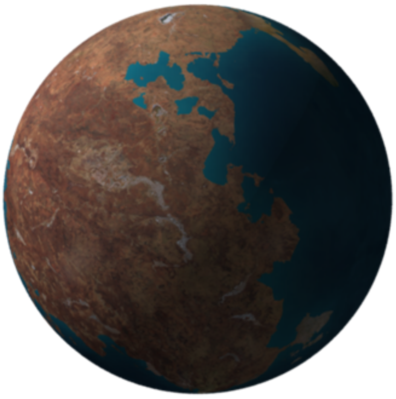
What conclusion did Wegener come to when he noticed that the coastlines of continents matched?

- Continents all have a similar shape. 1
- The continents could not have been joined at any point. 2
- Continents do not move. 3
- The continents must have been joined at some point. 4

Wegener said that in the past, all the Earth's continents were **joined together** in a single landmass.

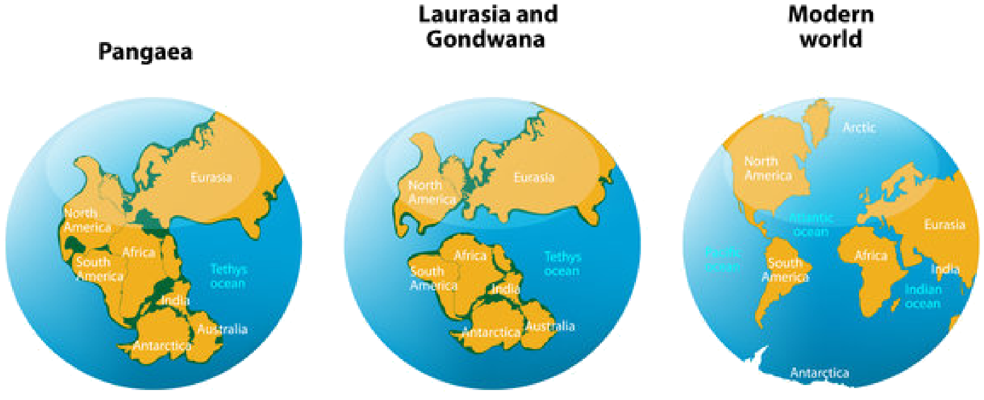
What did he call that landmass?

- Pangaea 1
- Cambria 2
- Tethys 3
- Atlantis 4



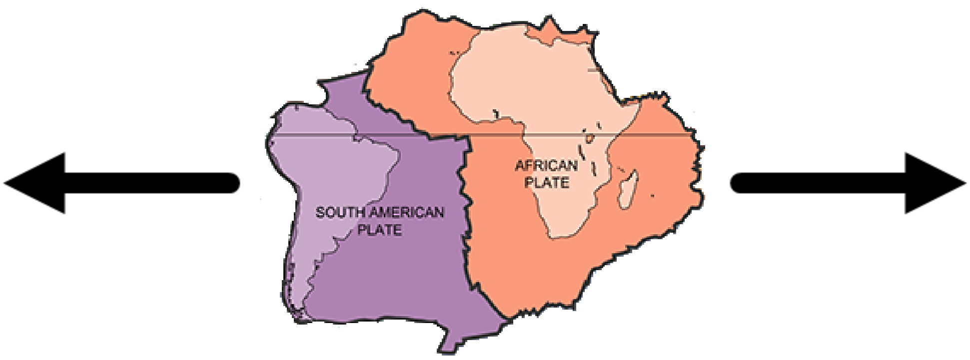
Wegener said that the Earth's **continents** were once joined together. We now know that this is true, but **how did the continents separate from each other?**

- They are parts of different tectonic plates that have moved apart. 1
- They are all fixed to the same tectonic plate, which has rotated. 2
- The whole Earth has expanded, creating cracks between continents. 3



Which of these is thought to **drive the movement of tectonic plates?**

- Mass extinctions 1
- Core collapse 2
- Muscular termites 3
- Mantle convection 4



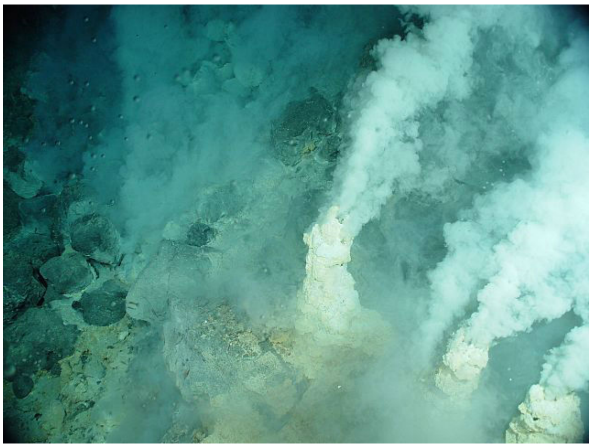
Drag and drop words to fill in the gaps below:

millions | divergent | oceanic | dozens

At a ______ plate boundary, tectonic plates are pulled away from each other. In the space between them, molten rock can well up and cool to form new ______ crust. Over ______ of years, this process has created the seafloor of the Atlantic Ocean and the Tasman Sea. The seafloor literally spreads out!

Mid-ocean ridges are associated with **which type of plate boundary?**

- Divergent boundary 1
- Transform boundary 2
- Convergent boundary 3



What do we call the **process** by which **new oceanic crust** is generated?

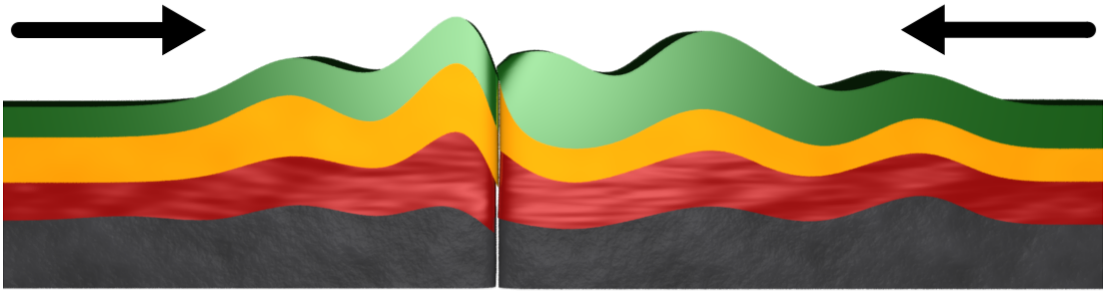
- Thermal expansion 1
- Metamorphism 2
- Seafloor spreading 3
- Fossilisation 4

Continental crust is **uplifted** at convergent boundaries.
This leads to the formation of...

- Volcanoes 1
- Flowerpots 2
- Trenches 3
- Mountains 4

Use the drop down menus to complete this passage:

Mountains are produced by a process called tectonic uplift. This happens when two [▾] collide at a convergent plate boundary. It causes [▾] and faulting (fracturing) of the rocks that make up each continent.

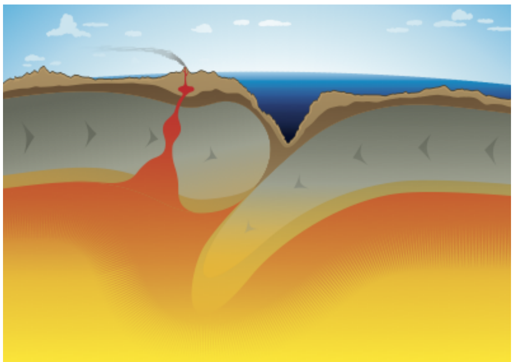


Which type of plate boundary occurs when plates are colliding into each other?

- Convergent boundary 1
- Divergent boundary 2
- Transform boundary 3

At which type of plate boundary does subduction take place?

- Divergent boundary 1
- Transform boundary 2
- Convergent boundary 3



In geology, what is a fault?

- A fracture in one or more layers of rocks. 1
- A negative aspect of somebody's personality. 2
- A curve created by squeezing a rock layer. 3
- The remains of a once-living organism. 4

The **San Andreas Fault** in the USA is an example of a **strike-slip fault.**

How are rock layers offset across this fault?

- Horizontally 1
- Vertically 2
- No offset 3

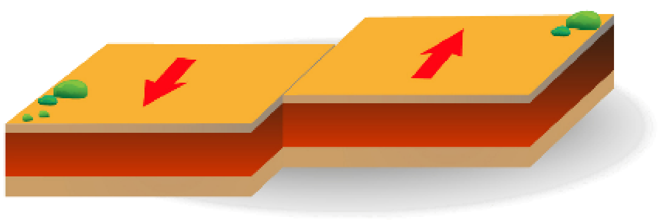
Thrust faulting happens when rocks are pushed together. At what **type of plate boundary** would you expect to see **thrust faults?**

- Divergent 1
- Convergent 2
- Transform 3

Is crust created or destroyed at a transform plate boundary?

- Created 1
- Destroyed 2
- Neither 3

Transform plate boundary



Tectonic plates can slide against each other along a **transform boundary.** However, most of the time the plates are stuck in place and **pressure** builds up between them.

What is produced when that pressure is released?

- A new continent 1
- An earthquake 2
- A mountain belt 3
- A volcano 4

What is magma?

- Weathered rock that is becoming sediment. 1
- Molten rock located beneath the Earth's surface. 2
- Molten rock flowing on or above the Earth's surface. 3
- Solid rock located anywhere in the Earth. 4

What do we call **molten rock that flows on the Earth's surface?**

- Pyrite 1
- Lava 2
- Magma 3
- Mantle 4

What is the Pacific Ring of Fire?

- A ring of volcanoes around the Pacific Ocean. 1
- A famous country song by Johnny Cash. 2
- A line of volcanoes under the Atlantic Ocean. 3
- A type of fossil only found in the Pacific Ocean. 4

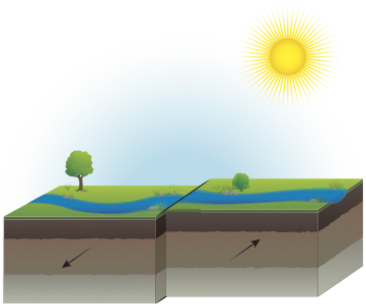
Part of the **Ring of Fire** passes through Indonesia, where there are now **130 active volcanoes.** They are associated with a **subduction zone.**

What type of plate boundary must exist under Indonesia?

- Divergent boundary 1
- Transform boundary 2
- Convergent boundary 3

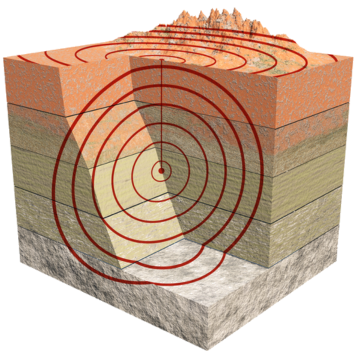
When tectonic plates move, **where** do earthquakes happen?

- Under the focal point 1
- Next to valleys 2
- Along fault lines 3
- Along S-waves 4

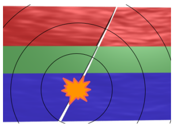


What is the name of the point on the earth's surface **directly above the focus** of an earthquake?

- Focus 1
- Boundary 2
- S-wave 3
- Epicentre 4



A force between tectonic plates stops them from moving until enough **energy** has built up. When the plates do move, all that energy is released as an **earthquake.**



What is the stopping force?

- Gravity 1
- Duct tape 2
- Friction 3
- Buoyancy 4
