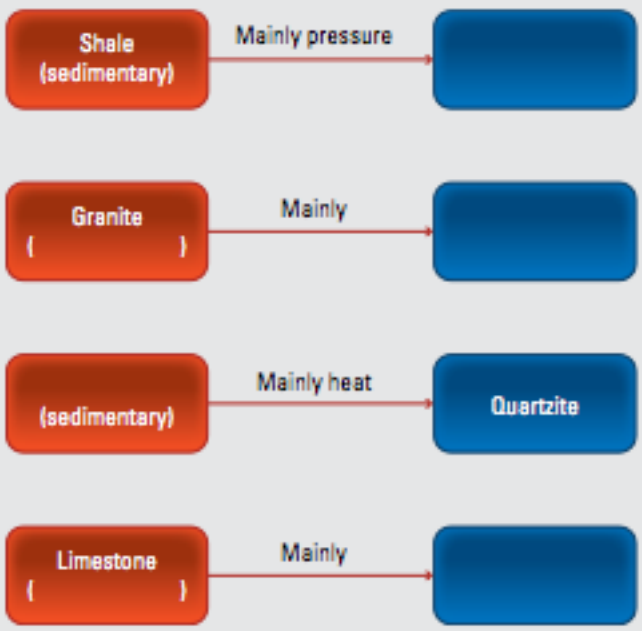
W-15

YEAR 8 SCIENCE
GEOLOGY
REVISION

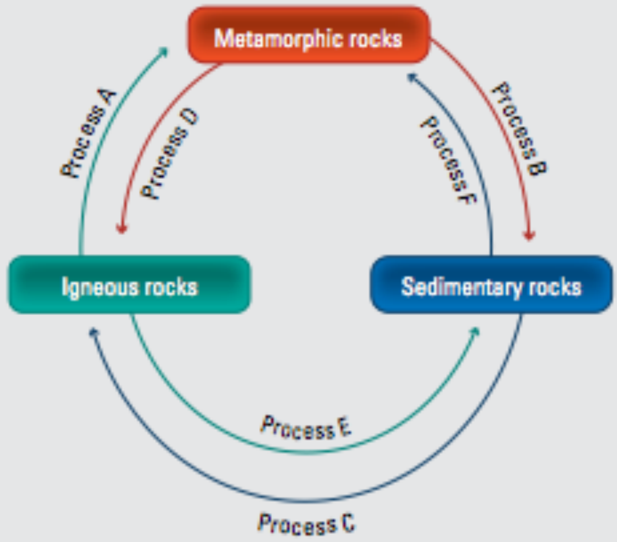
1 In which parts of the Earth are rocks formed?
2 How are all igneous rocks formed?
3 Explain the difference between the ways in which extrusive igneous rocks and intrusive rocks are formed.
4 List three examples of extrusive igneous rocks.
5 What clues does the size of the crystals in an igneous rock provide about how the rock was formed?
6 What are sediments?
7 Describe the three different ways in which sedimentary rocks can be formed.
8 Suggest a way of checking that a rock sample that appears to have seashells embedded in it is limestone.
9 Explain why some layers of sedimentary rocks are tilted or bent.
10 While studying sedimentary rocks in a railway cutting, a geologist discovers a bed of rock with ripple marks in its surface. How could the ripple marks have been made in the rock?
11 Describe two ways in which igneous and sedimentary rocks can be transformed into metamorphic rocks.
12 What is a parent rock?
13 Copy and complete the table below to summarise what you know about igneous, sedimentary and metamorphic rocks.

Type of rock	How it is formed	Special features	Example	Uses
Igneous				
Sedimentary				
Metamorphic				

14 Copy and complete the diagram below to show how some common metamorphic rocks are formed.



15 The changes that lead to the formation of the three main groups of rocks can be drawn as a cycle, as shown below.



Which of processes A–F involve:
(a) weathering and erosion
(b) heat and pressure
(c) remelting?

16 Explain why the crystals in granite are larger than those in basalt.
17 What characteristic of minerals do the following terms describe?
(a) Lustre
(b) Streak
(c) Hardness
18 What property of minerals does Mohs' scale provide an approximate measure of?
19 If you were given a sample of each of two different minerals, how could you tell which one had the greater hardness?
20 Which sedimentary rock was the most important material for toolmaking in the Stone Age? What properties made it so useful?
21 In the Stone Age, tools were made by a process called percussion flaking.
(a) Describe the process of percussion flaking.
(b) Which property of the rock used to make the tool must be different from those of the stone from which the tool is formed?
