Time

Teacher resource

Question 1

A train leaves at 9.40am. It arrives at its destination at 12.15pm.

How long did the trip take?

- ⬭ 2 hours and 35 minutes
- ⬭ 2 hours and 55 minutes
- ⬭ 3 hours and 25 minutes
- ⬭ 3 hours and 55 minutes

Answer: A
Skill: Students calculate elapsed time.

Additional questions

1. How would 9.40am and 12.15pm be represented on a 24-hour clock?
2. A plane took off at 2240 and arrived at its destination at 0635 the following day. The flight was within the same time zone. How long was the flight?

Question 2

The first track on a CD runs for 2 minutes and 45 seconds.
The second track is 1 minute and 50 seconds longer than the first.

How long does it take to run both tracks?

- ⬭ 4 minutes and 35 seconds
- ⬭ 5 minutes and 40 seconds
- ⬭ 6 minutes and 20 seconds
- ⬭ 7 hours and 20 minutes

Answer: D
Skill: Students calculate with minutes and seconds.

Additional questions

1. The first track on a CD runs for 2 minutes and 45 seconds.
   The second track is 1 minute and 50 seconds shorter than the first.
   How long is the second track?
2. How many tracks, each 1 minute and 50 seconds, could be played in 10 minutes?

Question 3

A deli is open from 6am to 8pm Monday to Saturday.

The deli also opens 9am to 7pm on Sunday.

How many hours each week is the deli open?

- ⬭ 80
- ⬭ 94
- ⬭ 97
- ⬭ 100

Answer: B
Skill: Students calculate elapsed time.

Additional questions

1. A deli is open from 6am to 6pm every day of the week.
   How many hours is the deli open each week?
2. A barber is open six days per week from 8.30am to 5.15pm.
   The barber closes for lunch each day between 12.00 noon and 12.45pm.
   How many hours is the barber open each week?

Question 4

Jim is a marathon runner. Jim's coach timed his practice marathon in four sections.
The results are shown in the table below.

	Time (hours:minutes:seconds)
Section 1	0:30:25
Section 2	0:58:45
Section 3	0:56:40
Section 4	0:35:34

What was the total time taken by Jim to run his practice marathon?

Answer: 3:01:24
Skill: Students calculate and convert familiar non-metric units

Background information

Students should understand that not all attributes are measured in metric units, for example angle and time. While time is measured in non-metric units of seconds, minutes, hours, days etc, some metric prefixes have been adopted to describe fractional parts of a second, for example, milliseconds and microseconds.

While conversions between non-metric units employ conversion factors that are not multiples of 10, decimal numbers can be used to denote part units. For example, 2.25 hours means 2 hours and 15 minutes. Students may require explicit support to interpret the meaning of decimal numbers in non-metric measurements.

Additional questions

1. Express 4.45 hours in hours and minutes.
2. Express 65 minutes as a decimal number of hours.
