

Review questions

Units 1 & 2 – Chapter 11

Research methods: Processing and interpreting psychological research

The following chapter review consists of multiple choice, true/false, fill in the blanks, matching and labelling questions. Check your answers on the last page.

- 1 The following data were obtained from a Morgan Poll carried out to investigate Australians' reactions to the conflict between Israel and Hezbollah in Lebanon. They asked the question: 'Do you believe Israel should continue to negotiate a ceasefire, or continue to use military force in Lebanon so that they can disarm Hezbollah?'

	Age group				
Response	14–17	18–24	25–34	35–49	50+
Negotiate ceasefire	85%	78%	78%	81%	79%
Continue with force	4%	13%	13%	11%	14%
Don't know/can't say	11%	9%	9%	8%	7%

Using the data above, which age group was most in favour of a negotiated ceasefire?

- A 35–49 year olds
 B Those aged 50+
 C 18–24 year olds
 D 14–17 year olds
- 2 _____ statistics allow you to organise, summarise and understand numbers.
- 3 Match the following terms with their definitions.

a Placebo effect	i Studies where neither the researcher nor the participants know which participants are receiving the treatment and which are receiving the placebo
b Single-blind studies	ii Studies where the participants do not know whether they are receiving the treatment and or the placebo
c Double-blind studies	iii Positive effects following a treatment due to the belief that it will lead to an improvement
d Hawthorne effect	iv When the experimenter's actions affect how the participants respond, especially if one group is treated differently from the other
e Experimenter effect	v Refers to the finding that simply knowing that they are part of a study can lead participants to change their behaviour

- 4 _____ present data in pictorial form that many of us find easier to read than tables.

5 Match the following graphs with the correct definition.

a Line graph	i Used to show information about frequency – i.e. how often something occurs
b Bar graph	ii Looks like bar graphs in that it uses bars to represent how one variable changes in relation to another, but the bars are drawn touching each other
c Histogram	iii Shows us the relationship between two variables
d Frequency polygon	iv Shows a variable on the x axis that is not continuous, with a space left between the bars

- 6 The _____, which is the most frequently reported measure, is the average score – i.e. the sum of all the scores divided by the number of scores.
- 7 The _____ is the most frequently occurring of a group of scores.
- 8 The _____ is the middle score in a set of scores. If you put all the scores in order from the highest to the lowest, half the scores will be above it and half below it.
- 9 The _____ of data is the difference between the highest and lowest score.
- 10 A _____ is a number that describes the strength and direction of the relationship between variables.

Review questions answers

- 1 D
- 2 Descriptive
- 3 a iii; b ii; c i; d v; e iv
- 4 Graphs
- 5 a iii; b iv; c ii; d i
- 6 mean
- 7 mode
- 8 median
- 9 range
- 10 correlation coefficient
