

PHYSICAL AND CHEMICAL CHANGES

A physical change occurs when _____

A chemical change occurs when _____

TEACHER DEMONSTRATION

Which of the changes demonstrated by your teacher were
physical? _____ chemical? _____

BURNING PAPER

Record as many observations as you can _____

What was left? Was this a chemical or physical change? Why?

COPPER SULFATE

What do you think will happen when you gently heat copper sulfate crystals?

PREDICTION

Now heat the crystals. What happened? _____

Did your prediction come true? Was this a physical or chemical change?

When your test-tube cools, add some water to the crystals - what happens? How do you explain this?

EXPLANATION

EXAMPLES OF PHYSICAL CHANGES	EXAMPLES OF CHEMICAL CHANGES

EXTRAS FOR EXPERTS

Here is a list of both types of changes. Mark a ☐ C next to those you think are chemical changes. Mark a ☐ P next to those you think are physical changes.

☐

Burning magnesium ribbon

☐

Magnetizing a piece of iron

☐

Bursting a balloon

☐

Burning a piece of paper

☐

Rusting of iron

☐

Cooking a cake

☐

Peeling potatoes

☐

Digesting your food

☐

Souring of milk

☐

Freezing water

☐

Melting paraffin wax

☐

Dissolving salt in water
