

## WRITING A SCIENTIFIC REPORT

When scientists conduct investigations, they need to write reports to tell other people about their work. When you conduct experiments, you need to write reports that allow others to understand what you did and to read about what you found out.

Your reports should include the following sections.

- |                   |                                                                                                                                                                                                |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Aim</b>        | A statement about why you did the experiment.                                                                                                                                                  |
| <b>Materials</b>  | A list of the equipment and chemicals that were used.                                                                                                                                          |
| <b>Method</b>     | An account of what was done. This will usually include a diagram showing how your equipment was set up. There should be enough details included to allow the reader to repeat your experiment. |
| <b>Results</b>    | A presentation of your data. This might include a list of observations, or tables and graphs.                                                                                                  |
| <b>Discussion</b> | An explanation of your results and a description of any difficulties you had with the experiment. This section might also include suggestions for improvements to the experiment.              |
| <b>Conclusion</b> | A brief account of what you found out and how your findings relate to your aim. It is a good idea to read your aim again before you write your conclusion.                                     |
