Case Study Descriptions

Lucky Orchids Case Study

Lucy is the owner of Lucky Orchids which specialises in growing orchids for the pot plant market.

Lucy's current system

Her nursery, a 600 square metre heated greenhouse, is located next to her house. The greenhouse is divided into three rooms that have different growing conditions for different stages of a plant's life. Each room has its own set of climate control units that can be set according to the needs of the plants in that room. Lucy can only check each unit by going into the greenhouse and reading the climate gauges in each room.

On a recent trip to Holland, to purchase new varieties of plants, she noted that Dutch nurseries were using a computer system to monitor and control the climate in their greenhouses. Having all the sensors and climate control devices connected to a computer allowed them to grow plants from seedling to flowering in a much shorter time.

Lucy's new system

Lucy recently has purchased a new nursery five kilometres from her house. Her new greenhouses will have to be upgraded for her orchids, so Lucy has decided that she wants to introduce a computer controlled climate system into both her existing local nursery and her new remote nursery.

She would like this computer climate control system to

- combine control of all climate devices to produce better conditions for orchid growth
- allow her to remotely check and alter the conditions in each greenhouse room in both nurseries
- record errors and send an alert message to her mobile phone if something fails.

Lucy has decided she needs some help to introduce her new computer climate control system for her greenhouses. She employs a system analyst, Susan, and outlines her current system and what she would like to achieve with the new system.

The Astro Hockey Club Database Case Study

The Astro Hockey Club wants to record details about coaches, teams and the equipment kits that have been allocated to the teams for the season. Thomas, one of the coaches, has created the tables below to store the club's data.

Each team can borrow one or more kits, and over time, each kit can be borrowed by more than one team. Thomas has created the table *tblEquipAllocations*, to accommodate this situation. Similarly a coach can train more than one team and a team can have more than one coach.

Study the tables below that Thomas has created:

tblCoaches						
CoachID	Surname	Firstname	Street	Suburb	Postcode	fCoachRating
1	Cropper	John	911 Millgate Road	SPORTSVILLE	6108	
2	Eggleston	George	6 Stedman Street	CROSSPATCH	6149
