

Controlling Body Temperature

Cut out the cards and put them into the correct positions on the negative feedback loop to show the sequence of events in the body to control temperature.

The **thermoregulatory centre** coordinates a response.

BEYOND

Temperature receptors in the skin and thermoregulatory centre detect an increase in body temperature.

BEYOND

The **thermoregulatory centre** coordinates a response.

BEYOND

Temperature receptors in the skin and thermoregulatory centre detect a decrease in body temperature.

BEYOND

Nervous impulse sent to the **thermoregulatory centre** in the brain.

BEYOND

Blood vessels dilate (vasodilation) and sweat is released from sweat glands.

BEYOND

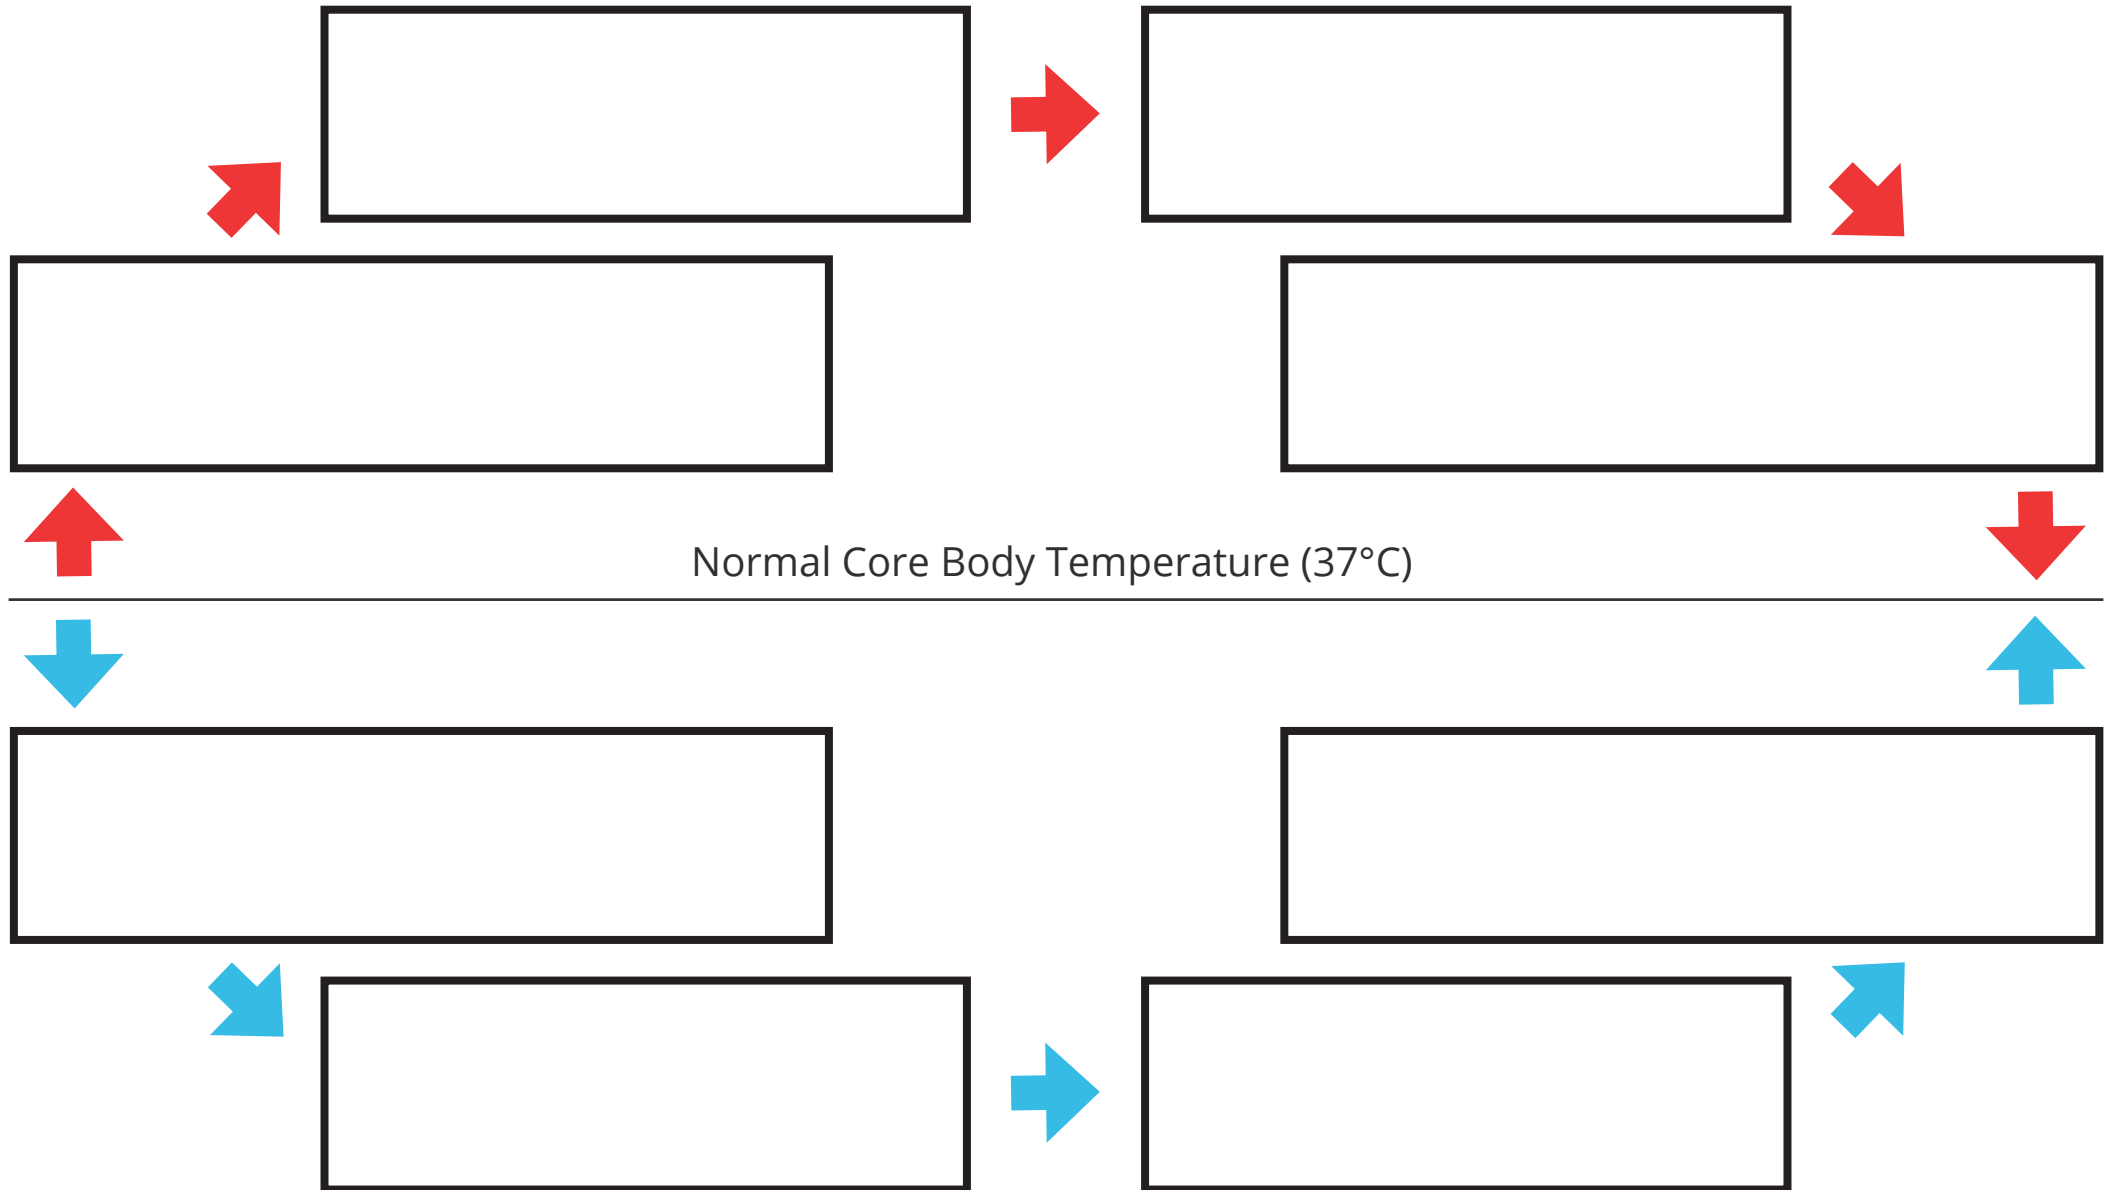

Nervous impulse sent to the **thermoregulatory centre** in the brain.

BEYOND

Blood vessels constrict (vasoconstriction), sweating stops and muscles contract rapidly (shivering).
