

OBSERVING ROCKS

Using a stereo microscope and/or a hand lens, carefully observe the rock samples you have been given. Look for the following characteristics.

- Colours.
- Presence of crystals (large or small)
- Hardness using Moh's Scale (fingernail (2), copper metal (4), steel nail (6)).
- Any bands or layers.
- Texture (rough, smooth, gritty).

Classify the rocks as sedimentary, igneous, or metamorphic.
