

Types of energy

Answers

1. Types of energy and their sources

Complete the following table by identifying energy sources for each energy type listed.

Sources: fluorescent tube, uranium fission, chocolate bar, moving tennis ball, vibrating violin string, rubber band, battery, infra-red lamp

Energy type	Source
Chemical	Chocolate bar
Sound	Vibrating violin string
Light	Fluorescent tube
Electrical	Battery
Heat	Infra-red lamp
Elastic potential	Rubber band
Nuclear	Uranium fission
Kinetic	Moving tennis ball

2. Types of potential energy

Potential energy can be classified as: gravitational, elastic or chemical.

Classify each of the following examples into each category of potential energy.

Example	Category of potential energy
Air brakes in a truck	Elastic
Wound watch spring	Elastic
Kerosene	Chemical
Sugar	Chemical
Depressed trampoline canvas	Elastic
Comet	Gravitational
Parachutist at the point of launch	Gravitational

3. Energy transformation

Describe the energy transformation illustrated below.

Potential energy to kinetic energy
