

**HOLY CROSS COLLEGE
YEAR 10 SCIENCE (EXTENSION)
PHYSICS - INFORMATION**

INTRODUCTION

The Extension Physics course will be a strong grounding for students considering Stage 2 and 3 Physics in the Senior years.

The focus will be on the area of Motion, which will incorporate the following areas.

- Measurement.
- Motion and Newton's Laws.
- Work, Energy and Power.

Students who undertake this course will develop mathematical skills that will allow them to apply theoretical concepts in a variety of situations. They will have opportunities to develop their investigative skills and use analytical thinking to explain and predict physical phenomena.

ASSESSMENT

1. GRADE

Your grade and assessment for Year 10 Physics is based on the following profile.

Tests (2)	50 %
Practical reports	20 %
Assignments (2)	20 %
<u>Homework</u>	<u>10 %</u>
Total	100 %

ASSESSMENT PROFILE

1. TESTS

At the end of each section of work, you will be assessed by a one period topic test. During the year, there will be at *two* of these. The type of questions asked will closely resemble those presented and discussed during class.

2. ASSIGNMENTS

Assignments will be set for major sections of work. They will comprise questions and problems in each section, and will be collected and marked before each test. There will be *two* assignments during the year.

3. PRACTICAL WORK

Experiments will be used to develop and assess a range of practical skills and those associated with processing data. Laboratory reports must be completed promptly at the end of practical sessions. Books will be marked after every two or three experiments.

Investigations in Physics will include research work to plan and conduct an investigation, and to formally report conclusions.

4. HOMEWORK

During the course, sets of work and worksheets will address the various concepts covered. Students should attempt the work set, with the focus on developing problem-solving and mathematical skills.
