

WORKSHEET - NAPLAN Year 9

Number
Percentages

Teacher: Niné Labuschagne

Exam Equivalent Time: 16.25 minutes (based on NAPLAN allocation of
~1.25 min/mark)

Worked Solutions

1. Number, NAP-02657

$$80 + (80 \times 5\%) = 80 + 4 \\ = 84 \text{ kg}$$

2. Number, NAP-20265

$$\frac{8}{8 + 13} = \frac{8}{21} = 0.380\dots$$

$\therefore$ Approx 38% are canaries.

3. Number, NAP-55618

$$\text{Total in class} = 17 + 8 \\ = 25$$

$\therefore$ Percentage absent

$$= \frac{8}{25} \times 100 \\ = 32\%$$

4. Number, NAP-38039

$$\text{WA Population in 2016} \\ = 2\,085\,021 \times 1.003 \\ \approx 2\,091\,300$$

5. Number, NAP-49732

Length of the handle as a percentage

$$= \frac{19}{103.4} \times 100 \\ = 18.4\dots \%$$

$\therefore$ 18% is the closest option.

6. Number, NAP-73253

Paul's time

$$= (1 \text{ hour and } 10 \text{ minutes}) \times 125\%$$

$$= 70 \times 125\%$$

$$= 87.5 \text{ minutes}$$

$\therefore$ 88 minutes is the closest choice.

7. Number, NAP-14546

Percentage left to travel

$$= \frac{(3150 - 2650)}{3150} \times 100$$

$$= 15.9\%$$

8. Number, NAP-38067

$$\frac{5}{9} = 55.55\ldots\%$$

$$= 56\% \text{ (nearest \%)}$$

9. Number, NAP-79195

$$75\% - 45\% = \$90$$

$$30\% = \$90$$

$$\therefore 1\% = \$3$$

$$\begin{aligned}\therefore \text{The bat cost} &= 100 \times 3 \\ &= \$300\end{aligned}$$

10. Number, NAP-96803

$$\text{Price increase} = 15 - 12 = \$3$$

$$\begin{aligned}\text{Percentage increase} &= \frac{3}{12} \\ &= 0.25 \\ &= 25\%\end{aligned}$$

11. Number, NAP-73312

$$\text{Sale price} = 80\% \times \$3200$$

$$= \$2560$$

$$\text{Purchase price} = 2560 - 64$$

$$= \$2496$$

Percentage of original price

$$= \frac{2496}{3200} \times 100$$

$$= 78\%$$

12. Number, NAP-02720

Total turtle eggs hatched

$$= (25\% \times 300) + (75\% \times 120) + (50\% \times 80)$$

$$= 75 + 90 + 40$$

$$= 205$$

$$\text{Total eggs laid} = 300 + 120 + 80$$

$$= 500$$

$\therefore$ Percentage of eggs that hatched

$$= \frac{205}{500} \times 100$$

$$= 41\%$$

13. Number, NAP-55675

$$65\% \times \text{Savings} = \$390$$

$$\begin{aligned}\therefore \text{Savings} &= \frac{390}{0.65} \\ &= \$600\end{aligned}$$

$$\begin{aligned}\therefore \text{Savings left} &= 600 - 390 \\ &= \$210\end{aligned}$$
