

YEAR 10 WILLETTON SHS

Health Education – Term 3, 2024

Impacts on Health

TEACHER NAME: _____

2024 Year 10 Health Content Program

Willetton Senior High School

Term 3 – Impacts on Health

Duration: 5 weeks

Western Australia Curriculum Descriptors:

Being healthy, safe, and active:

- The impact of societal and cultural influences on personal identity and health behaviour, such as: how diversity and gender are represented in the media, differing cultural beliefs and practices surrounding transition to adulthood (ACPPS089).

Contributing to healthy and active communities:

- Health campaigns and/or community-based activities designed to raise awareness, influence attitudes, promote healthy behaviours and increase connection to the community (ACPPS096; ACPPS097).
- Social, economic, and environmental factors that influence health, such as: level of education, income/employment social networks and supports (family, friends, and community attachment), housing and access to services (ACPPS098).

Session:	Lesson Aim and Content:	Resources:	Assessments:
1	Lesson Focus: 1. Identify the 5 dimensions of health. 2. List factors that can impact each dimension.	• PowerPoint Lesson 1. • Scrap paper (snowball hook activity). • Small ball (tennis ball, stress ball etc. – silent ball activity). • Printed emoji faces (can print own or use coloured version in storeroom). • Puzzles (can use own or use ones provided to teachers). • Meditation (Smiling Minds App, YouTube etc.)	
2	Lesson Focus: 1. Define risk factors for health. 2. Consider how obesity can impact on the dimensions of health. 3. Introduce the determinants of health.	• PowerPoint Lesson 2. • Determinants of Health – https://www.youtube.com/watch?v=LP32-90UCIk&t=75s • Socio-economic impacts on health – http://www.unnaturalcauses.org/video_clips_detail.php?res_id=409 • Environmental impacts on health – http://www.unnaturalcauses.org/video_clips_detail.php?res_id=71 • Neighbourhood impacts on health – http://www.unnaturalcauses.org/video_clips_detail.php?res_id=217	
3	Lesson Focus: 1. Review the determinants of health. 2. Compare the impacts of rural and metropolitan living on health.	• PowerPoint Lesson 3. • Film: 'In My Blood It Runs.' https://clickv.ie/w/T1cq • Sticky notes (reflection activity).	
4	Lesson Focus: 1. Evaluate the influence of media on health. 2. Define health promotion. 3. Analyse existing health promotion campaigns.	• PowerPoint Lesson 4. • Sticky notes (post it slam hook activity). • 'Measure Up' – https://www.youtube.com/watch?v=9dL4IN6GKi4 • 'Cowards Punch' – https://www.youtube.com/watch?v=qCaAY4XLAFI • 'Stop it at the Start' – https://www.youtube.com/watch?v=_HFbOXSLFvw	Introduce Task 4

2024 Year 10 Health Content Program

		• <i>'Make Smoking History'</i> – https://www.youtube.com/watch?v=tlAnhDvuslk • <i>'Alcohol. Think Again'</i> – https://www.youtube.com/watch?v=_nmokvjMISA • <i>'R U OK? Day'</i> – https://www.youtube.com/watch?v=gfq7SHXCvNg • <i>'Australian Story: Beyond OK'</i> – https://www.youtube.com/watch?v=4GhzjNdu83w&t=8s	
5	Lesson Focus: 1. Assessment Task 4 – due week 6. 2. Class time to complete task.	• Assessment Task 4 – Impacts on Health task sheet.	Assessment Task 4 (due week 6)

Name: _____

Due Date: _____

WILLETTON SHS
YEAR 10 HEALTH EDUCATION ASSESSMENT TASK 4 (25%)
IMPACTS ON HEALTH

INVESTIGATE A HEALTH CAMPAIGN

Health Promotion is "the process of enabling people to increase control over their health and its determinants, and thereby improve their health" (World Health Organisation).

Choose a health topic for promotion and explore an existing health campaign. Answer the questions below, in detail, in relation to your chosen campaign and provide any material/evidence (e.g., statistics, website links etc.) to accompany your responses.

DO NOT choose the RUOK Day campaign (this is done in class for you as an example).

Health topics of consideration include, but are not limited to: *mental health, smoking and vaping, physical activity, obesity, sexual health, drug use, alcohol use, asthma, immunisations etc.*

NOTE: one poster is **not** a campaign but may be **part** of a whole campaign. If you are unsure if what you have chosen is correct, please check with your teacher. Focus on campaigns that are current.

Your response is to be in report form with each question being a new heading.

Below are some campaigns that may relate into your chosen topic.

- Movember
- Be Brave and Shave
- Don't Make Smokes Your Story
- Live Lighter
- Girls Make Your Move
- World Mental Health Day
- Slip Slop Slap Seek Slide
- Stop it at the Start
- Alcohol. Think Again
- Make Smoking History

Year 10 Health Education – Assessment Task 4: Impacts on Health

Answer the following questions **in detail** to support your choice of campaign:

NAME OF CHOSEN CAMPAIGN: _____

1. Provide an **overview** of the health topic and the health campaign you have chosen.
Provide statistics/data on **why** it's an important and relevant **health issue**.
(4 marks)
2. **WHO** – is the health promotion targeting?
Provide an example from the campaign to justify and support your answer.
(3 marks)
3. **HOW** – does the campaign raise awareness for the identified target audience? Discuss two ways/methods the campaign raises awareness.
(4 marks)
4. **WHAT** – attitudes/beliefs are the campaign trying to change AND how does this influence a change in health behaviour?
 - a. What is the campaign trying to encourage/change/prevent amongst the target group?
 - b. How is the campaign creating this change?(4 marks)
5. **REVIEW** – analyse the campaign and discuss (in detail) one positive and one area for improvement that could be implemented to enhance the campaign results.
(4 marks)
6. Grammar, spelling, and sentence structure.
(3 marks)

Include a bibliography list.

Year 10 Health Education – Assessment Task 4: Impacts on Health

Marking Key

Name: _____

CRITERIA: Does the student:	4 Marks Excellent	3 Marks Good	2 Marks Satisfactory	1 Marks Limited
1. Provide an overview about the health topic (2mks) and campaign and WHY it's important (2mks).	Provides a detailed overview of both the health topic and campaign with statistics	Provides a brief overview of both the health topic and campaign with statistics	Provides a limited overview of either the health topic or health campaign with statistics.	Provides either the health topic or health campaign or statistics
2. WHO - Identify and describe the target audience for the campaign?		Identifies and describes who the target audience is in some detail and provides an example from the campaign	Identifies and describes who the target audience is in some detail however does not provide an example from the campaign	Lists who the target audience is
3. HOW - Identify and explain two ways/methods on how the campaign raises awareness for the identified target audience.	Identifies and explains two ways in detail how the campaign raises awareness for the identified target audience	Identifies and explains two ways in limited detail how the campaign raises awareness for the identified target audience	Identifies and explains in detail one way the campaign raises awareness for the identified target audience	Identifies and explains in limited detail one way the campaign raises awareness for the identified target audience
4. WHAT - Identify and explain what attitudes/beliefs the campaign is trying to change AND how does this influence a change in health behaviour?	Identifies and explains in detail what attitudes/beliefs the campaign is trying to change, whilst also explaining how this influences change in health behaviour	Identifies and explains in some detail what attitudes/beliefs the campaign is trying to change, whilst also explaining how this influences change in health behaviour	Provides limited detail in identifying and explaining what attitudes/beliefs the campaign is trying to change, whilst also explaining how this influences change in health behaviour	Provides limited detail in identifying and explaining what attitudes/beliefs the campaign is trying to change
5. REVIEW - in detail – one positive (2mks), one area of improvement (2mks)	Explains in detail both one positive and one area for improvement that could be implemented to enhance the campaign	Explains in some detail one positive and one area for improvement that could be implemented to enhance the campaign	Provides limited information on one positive and one area for improvement that could be implemented to enhance the campaign	Provides limited information on either one positive or one area for improvement
6. Grammar, spelling, and sentence structure.		No grammatical errors or spelling mistakes. Language used enhances clarity and understanding. Exceptional layout and sentence structure.	Some minor grammatical errors and spelling mistakes. Minor issues do not significantly impact comprehension. Limited understanding of sentence structure.	Several grammatical errors or spelling mistakes. No sentence structure and poor layout.
/22	Comments:			

GLOSSARY

Sometimes in health we will use words that you do not understand. Each week, your aim is to write down two new words and their definitions.

You can write down new words that you hear and learn, or your teacher may ask you to add specific words.

Health	A state of complete physical, mental, and social well-being and not merely the absence of disease or infirmity.
Holistic Health	An approach to wellness that addresses all dimensions of health. It considers the whole being of an individual.
Dimensions of Health	The 5 dimensions of health help to provide a full picture of health and each dimension can impact another.
Risk Factors	A factor that increases the risk of a person developing a disease or condition.
Determinants of Health	Factors in our life that can be in or out of our control and can have a positive or negative impact on our health.
Health Promotion	The process of enabling people to increase control over, and to improve, their health.
Health Campaign	Aims to raise awareness and understanding of a health issue, and often aims to change people's health behaviours.

What is HEALTH?

Define HEALTH as told by the World Health Organisation (WHO):

A state of complete physical, mental, and social well-being and not merely the absence of disease or infirmity.

5 Dimensions of Health:

Health should be viewed as...

Health should be viewed as a holistic approach, meaning it is not just the absence of disease or illness etc.

Dimensions of Health:

There are many factors in our life that can impact how healthy we are considered to be across the 5 dimensions of health.

In the space below, list and define the 5 dimensions of health. Include at least 3 factors within each one.

Physical:

- Relates to the functioning of the physical body.
- Includes factors such as diet, sleep, injury and rehab, hygiene, exercise etc.

Social:

- Involves how we get along with other people.
- Includes the ability to make and keep friends and good relationships with family/peers/colleagues.
- It means communicating well, showing respect and care for self and others.

Emotional:

- Encompasses the knowledge and skills to identify personal feelings and the ability to handle those emotions.
- Connected to mood.
- Also includes the ability to understand other people's emotions.
- Includes factors such as our emotions – i.e., happy, sad, angry etc., understanding why we may feel a certain way, ability to be empathetic and sympathetic.

Mental:

- The cognitive aspect of health.
- More around the functioning of the brain – thoughts, behaviours, and processing of the mind.
- Our ability to cope with daily demands – stress, change, problems etc.
- Includes factors such as goal setting, knowledge, decision making, problem solving, addiction, mental health.

Spiritual:

- The need for meaning, purpose and fulfilment in life.
- Includes factors such as hope, religion, meaning in life, contentment, beliefs and morals and peace.

Reflection:

1. Which dimension of health do you feel you thrive in the most?

2. Which dimension of health do you feel you could improve and why?

Obesity:

A risk factor is:

A factor that increases the risk of developing something negative.

e.g., a risk factor for skin cancer is tanning in the sun with no sunscreen or having a family history of skin cancer.

Tanning and family history are both **factors that can increase the risk** of developing skin cancer.

Risk factors for obesity:

Not enough exercise → output of energy
Too much bad/junk food
Biological factors: age, gender, race/ethnicity, genetics
Sedentary lifestyle
Poor sleep
Excessive food/drink
Too much alcohol
Other health conditions
High stress

Causes of obesity risk factors:

Peer pressure – eating junk food after school with mates.
Family traditions/cultures – large meals at dinner time, overeating.
Country norms – pies and sausage rolls, lots of alcohol.
Low income – can't buy healthier options.
Low income – can't afford sport or gyms.
Live too far away from sporting associations.
Parent genetics.
Stress – poor eating habits.
Low paying jobs – poor income
Family beliefs/values – little emphasis put on healthy eating, eating properly, alcohol consumption.
No access to green spaces to exercise/poor living environment.
Close proximity to take away/junk stores.
Little knowledge of what is healthy and unhealthy/risks of alcohol (education).

Determinants of Health:

Many factors combine together to affect the health of individuals and communities. Whether people are healthy or not, is determined by their circumstances and environment.

To a large extent, factors such as where we live, the state of our environment, genetics, our income and education level, and our relationships with friends and family all have considerable impacts on health, whereas the more commonly considered factors such as access and use of health care services often have less of an impact.

All of these things that can play a role in determining our health, are the determinants of health.

Define each of the determinants in the space below:

	<u>Social</u> –	Factors involving culture, family, support networks, social/group environment etc.
	<u>Environmental</u> –	Involving natural or geographical factors, climate, the built environment such as industrial or housing area and conditions, access to areas such as parks or day to day conveniences etc.
	<u>Socioeconomic</u> –	Factors involving combination of income, education, and employment etc.
	<u>Biological</u> –	Genetic factors, previous family history, birth complications, race (predisposition of certain races to particular health problems), skin colour (especially for skin cancer) etc.

All of the determinants of health can impact our health behaviours, choices and outcomes. They can be within our control and out of our control but can all still have some sort of impact on our life.

Determinants of Health and Obesity:

Think back to the risk factors and causes of risk factors you identified that contribute to obesity.

Categorise them in to the determinant of health they would best fit into in the space below:

Social –

Transport – walking vs. driving.
Social support – friendship groups and peer influences
Food choices
Cultural events/expectations

Environmental –

Neighbourhoods and greenspace – are there local gyms or parks?
Neighbourhood safety – can they exercise outside safely?
Is the climate conducive to being able to exercise outdoors?

Socioeconomic –

Job type – sedentary job vs. gym trainer vs. PE teacher
Enough income to be able to afford nutritious foods.
Enough income to be able to afford gym memberships etc.
Enough time to cook healthy meals.
Education/knowledge of how to eat healthy and exercise effectively.

Biological –

Genetics can impact conditions like high blood pressure, cholesterol, and weight loss.

Reflection:

1. List 3 things you CURRENTLY do in your life to stay healthy:

2. List 3 things you COULD DO BETTER in your life to stay healthy:

Determinants of Health – Choose your own health condition:

- Choose a health condition.
- Identify the risk factors.
- Identify the determinants of health that can affect this health condition.
- Suggest ways or behaviours to improve health for this condition.

A story about Jason:

- “Why is Jason in the hospital?
- Because he has a bad infection in his leg.
- But why does he have an infection?
- Because he has a cut on his leg, and it got infected.
- But why does he have a cut on his leg?
- Because he was playing in the junk yard next to his apartment building and there was some sharp, jagged steel there that he fell on.
- But why was he playing in a junk yard?
- Because his neighbourhood is kind of run down. A lot of kids play there and there is no one to supervise them.
- But why does he live in that neighbourhood?
- Because his parents can’t afford a nicer place to live.
- But why can’t his parents afford a nicer place to live?
- Because his dad is unemployed, and his mum is sick.
- But why is his dad unemployed?
- Because he doesn’t have much education and he can’t find a job.
- But why ...?

Write your own story of Jason (or yourself) in the space below. This time, using positive influences of the determinants instead of negative.

For example...

- “Why is Jason in the hospital?
- Because he fell off his bike at the skate park.
 - Enjoys spending time outdoors, adventurous (environmental determinant)
- But why did he fall off his bike?
- Because he was showing off in front of his friends.
 - Has close friends and a support network (social determinant)

Metropolitan vs. Rural & Remote Living:

Think about the area that you live in and what is around your area that can impact your health.

These impacts can be positive or negative or impact you directly or indirectly.

Write a list of the things and features in your community, close to your area, that can impact your health.

Fiona Stanley Hospital & St. John of God Murdoch, public transport – buses and trains, other medical facilities – doctor's surgeries, dentists, physio's etc., movie cinemas, shopping centers – groceries and clothes etc., parks and ovals, rec centers, schools, fast food restaurants etc.

Now, consider your list above and now write an explanation for each about how it can impact health.

- Explain if the impact is positive, negative, direct, or indirect.
- Where possible, link to the determinants of health.
- And consider the dimensions of health and how they may be impacted.

- E.g., local parks which allow us to play outside with friends and get fresh air. These are positive as they are beneficial for our physical health, social health, and even emotional health.
- E.g., Access to lots of transport options such as cars, buses or trains can be beneficial in helping get to work/school etc. which is evidence of a socio-economic determinant impact, but can negatively impact our physical health through pollution etc.

The health outcomes for those living in rural communities are significantly poorer than those living in the city for certain health issues:

- Land transport accidents
- Diabetes
- Suicide
- Coronary Heart Disease
- Lung Cancer

What factors can contribute to the poor health experienced by those in rural communities?

Less access to services, less access to education, the population in rural areas has a higher proportion of Indigenous Australians, therefore there could be cultural impacts on access to education etc., potentially less work available, less health care facilities, less emergency services available, more exposure to extreme weather (drought, floods etc.), less safety measures on road – on remote roads, drivers tend to speed more and there is less street lighting, higher crime rates, food is more expensive, social isolation.

- Choose one health issue from the list above.
- Research the risk factors that contribute to your chosen health issue in rural Australia.
- Identify the determinants at play.

Health Issue:

Risk Factors:

Determinants:

In my blood it runs

Click view: <https://clickv.ie/w/T1cq>

Told through the eyes of charismatic 10-year-old Arrernte/Garrwa boy Djuwan and his family, the film charts the challenges Djuwan faces both in his school and on the streets of Alice Springs.

Western Australia Curriculum

Contributing to healthy and active communities

Social, economic and environmental factors that influence health, such as: level of education income/employment, social networks and supports (family, friends and community attachment), housing, access to services. ([ACPPS098](#))

Being healthy, safe and active

The impact of societal and cultural influences on personal identity and health behavior, such as: how diversity and gender are represented in the media, differing cultural beliefs and practices surrounding transition to adulthood. ([ACPPS089](#))

Activity

Identify some of the challenges that Djuwan's family and community, and/or Aboriginal and Torres Strait Islander people across Australia may face in some of the following areas. Include examples/references from the film where possible.

- a) Education
- b) Health and wellbeing
- c) Employment
- d) Land and Spirituality
- e) Culture

Challenges	Examples
Education	
Health and Wellbeing	
Employment	
Land and Spirituality	
Culture	

Media and its Impacts on Health:

Media includes, but is not limited to:

Media can use a range of strategies / techniques to make the audience feel or act in a certain way.

In the space below, list at least 3 positive and 3 negative impacts the media can have on health:

POSITIVE EXAMPLES OF MEDIA'S IMPACTS ON HEALTH:

Advertisement creates awareness around unhealthy behaviours (drink driving ads), advertises new health products, helps to encourage change by the promotion of the healthy behaviours, creation of apps can enhance health (i.e., fitness tracking, recipes, health monitoring etc.)

NEGATIVE EXAMPLES OF MEDIA'S IMPACTS ON HEALTH:

Fast food advertisements make us want unhealthy food which can lead to health issues (diabetes), unrealistic expectations of products/behaviours (we see something advertised and want the same outcome but mightn't be able to achieve it), increasing use of media (gaming, streaming etc.) and social media can lead to a more sedentary lifestyle, the impacts on mental health due to social media etc.

Health Promotion:

What is Health Promotion?

Health promotion is the process of enabling people to increase control over, and to improve, their health.

What does Health Promotion do?

Raises the awareness of health issues within a community by bringing attention to it.

List as many examples as possible of health campaigns you can think of in two minutes.

Think of campaigns you have seen on TV, advertised at sporting events, or heard on the radio to help you.

1	2	3	4	5
6	7	8	9	10
11	12	13	14	15
16	17	18	19	20

Health Promotion Campaigns:

Watch the following health promotion campaign adverts and complete the table below for each one:

1. <https://www.youtube.com/watch?v=9dL4IN6GKi4>

Name of campaign:	Target Audience	Intended behaviour change	Do you think it's effective? Why / why not?
Measure Up	Adults who are overweight with young families. Family members of overweight people.	Reduce obesity and draw attention to the potential consequences of obesity.	

2. <https://www.youtube.com/watch?v=qCaAY4XLAFI>

Name of campaign:	Target Audience	Intended behaviour change	Do you think it's effective? Why / why not?
Cowards Punch.	Typically, males who drink and resort to violence.	Walk away, don't resort to violence and one punch can kill someone.	

3. https://www.youtube.com/watch?v=_HFbOXSLFww

Name of campaign:	Target Audience	Intended behaviour change	Do you think it's effective? Why / why not?
Stop It At The Start	Young men, parents with young children.	Teach respect young so poor behaviours don't continue when they get older and protect the safety and wellbeing of women.	

4. <https://www.youtube.com/watch?v=tIAnhDvuslk>

Name of campaign:	Target Audience	Intended behaviour change	Do you think it's effective? Why / why not?
Make Smoking History	Anyone who smokes, parents of young children who smoke.	Quit smoking, especially around young people and consider the long-term consequences.	

5. <https://www.youtube.com/watch?v= nmokvjMISA>

Name of campaign:	Target Audience	Intended behaviour change	Do you think it's effective? Why / why not?
Alcohol. Think Again.	Pregnant women, friends/families of pregnant women.	Discouraging drinking alcohol while pregnant due to the effects it can have on the baby.	

R U OK? Day:

R U OK? Day is a health promotion campaign all about encouraging people to start the conversation and ask, “R U OK?”

It helps to bring awareness to suicide and mental health and normalise asking, and talking, about our feelings and creating a sense of connectedness.

<https://www.ruok.org.au/our-story#:~:text=In%201995%2C%20much%2Dloved%20Barry,.>

R U OK? Day has become one of the nation’s most embraced days of action.

One conversation can change a life.

For the R U OK? Day health promotion campaign, answer the questions below:

<https://www.ruok.org.au/>

NAME of campaign:	
Brief OVERVIEW of health issue and campaign:	
WHO is the target audience of campaign?	
HOW does the campaign raise awareness?	
WHAT attitudes/beliefs is the campaign trying to change AND how does this impact health behaviour?	

WHY is this health campaign needed?
(Data/statistics)

REVIEW:
Identify positives of the campaign:
Identify areas for improvement:

Ask
R U OK?

Have a conversation using these 4 steps

- 1**  **Ask R U OK?**
How are you travelling?
You don't seem yourself lately - want to talk about it?
- 2**  **Listen**
I'm here to listen if you want to talk more.
Have you been feeling this way for a while?
- 3**  **Encourage action**
What do you think is a first step that would help you through this?
Have you spoken to your doctor about this?
- 4**  **Check in**
Just wanted to check in and see how you're doing?
Have things improved for you since we last spoke?

Learn more at ruok.org.au

A conversation could change a life.

A CLOSER LOOK AT A HEALTH CAMPAIGN:

Using the following website, answer the following questions:

www.ruok.org.au

1. Provide an overview of both the Health topic and campaign chosen
2. WHO – is the health promotion targeting? - use an example from the campaign which supports your answer.
3. WHAT – two ways/methods does the campaign raises awareness for the identified target audience?
4. WHAT – attitudes/beliefs are the campaign trying to change AND how does this influence a change in health behaviour?
5. WHY – should this health focus be important to the nation? (show statistics/data to support your answer)
6. WHY - is the health campaign needed. You must include a graph showing the need for the campaign and reference it to the campaign.
7. REVIEW – analyse the campaign and discuss (in detail) one positive and one area for improvement that could be implemented to enhance the campaign results.

1. Provide an overview of both the Health topic and campaign chosen

Mental health is a growing concern in Australia

The R U OK campaign was started in 2009

2. WHO – is the health promotion targeting? - use an example from the campaign which supports your answer.

Passer-by people who regularly forget to ask a simple question. Targeting anyone - aimed at everyone. Aimed primarily at people to try and limit mental illness before it gets too late to do anything. (Prevention is better than cure).

3. WHAT – two ways/methods does the campaign raise awareness for the identified target audience?

Quick effective language abbreviations - easy to remember. Use of Aussie slang (OK), wrist bands, huge nationwide campaign - using lots of media formats, using personalised stories - makes it seem real, bright colours.

4. WHAT – attitudes/beliefs are the campaign trying to change AND how does this influence a change in health behaviour?

Don't ignore friends and family if you feel something is wrong - make a point of staying connected. Slow down and remember the people who are important in your life.

5. WHY – should this health focus be important to the nation? (show statistics/data to support your answer)

1. In each year, approximately one in every five Australians will experience a mental illness.
2. Mental illnesses are the third leading cause of disability burden in Australia, accounting for an estimated 27% of the total years lost due to disability.
3. About 4% of people will experience a major depressive episode in a 12-month period, with 5% of women and 3% of men affected.
4. Approximately 14 % of Australians will be affected by an anxiety disorder in any 12- month period.
5. About 3% of Australians are affected by psychotic illness; such as schizophrenia, where there is a loss of contact with reality during episodes of illness.
6. Approximately 2% of Australians will experience some type of eating disorder in their life, with women 9 times more likely than men.
7. About 5% of Australians will experience substance abuse disorders in any 12- month period, with men more than twice as likely as women to have substance abuse disorders.
8. Prevalence of mental illness decreases with age, with prevalence greatest among 18-24 year olds.
9. Women are more likely than men to seek help for anxiety disorders (18% compared with 11%) and mood disorders (7.1% compared with 5.3%).
10. A national survey showed that 35% of people with a mental disorder had used a health service and 29% consulted a GP within the 12 months before the survey.
11. Women are more likely than men to use services for mental health problems.
12. Limited research suggests that Aboriginal and Torres Strait Islander people

experience mental disorders at least as often as other Australians.

6. **WHY - is the health campaign needed. You must include a graph showing the need for the campaign and reference it to the campaign.**

7. **REVIEW – analyse the campaign and discuss (in detail) one positive and one area for improvement that could be implemented to enhance the campaign results.**

Reflection:

Think about WHO is in your support network? Which 5 people in your life can you go to if you ever need support?

Write their names in the hand below.
