Total time for the task: 50 minutes
Total marks: 30 marks
Weighting: 15% of the school mark

Read this article about safety in the workplace and answer the questions that follow.

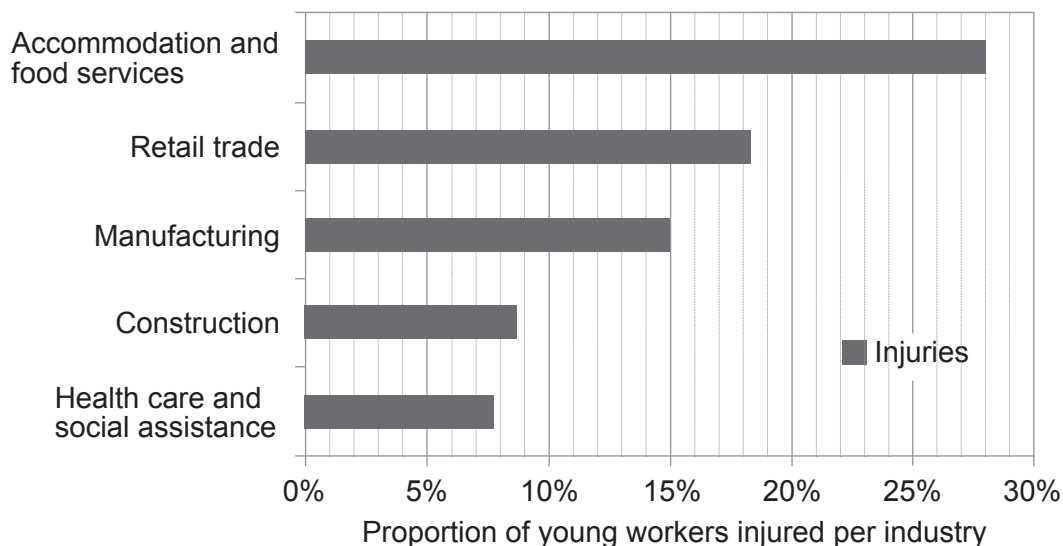

If it's too hot in the kitchen ...

Occupational Health and Safety is a serious issue in the workplace, particularly with young workers aged under 25. Safety procedures need to be followed to prevent thousands of young workers being injured each year in the workplace and making compensation claims for their injuries. Insurance companies pay out millions of dollars in compensation claims each year and employers have to allow for these injured workers to have time to recover.

Many inexperienced youths enter the workforce on a part-time or casual basis. Accommodation and food services, such as fast food outlets, hotels, restaurants and cafés provide more young workers with employment opportunities than any other industry. Working in these industries, young workers gain valuable work experience that can lead to full-time employment in the future. However, in entering the food service industry, young workers need to be aware that their workplace has more risks and hazards than most other industries.

As can be seen in Figure 1, young workers in the accommodation and food services industries have the highest rate of injuries for the hours worked.

Figure 1: Proportion of young workers injured in selected industries.

Burns and scalds

Almost half of the reported injuries in the food services industry related to employees being burnt or scalded. Young workers are exposed to a range of hazards in kitchen and café environments which can lead to serious injuries.

- Burns are caused by contact with hot surfaces, hot objects and open flames, such as ovens and hot plates.
- Scalds are caused by contact with hot fluids, such as boiling water and steam.

See next page

To reduce the number of young workers being injured in the accommodation and food services industries, employees are provided with the following safety procedures.

Safety Procedures

Please ensure you:

- **use personal protective equipment**
Oven mitts should be worn when handling hot objects, such as pots and hot plates, to prevent heat burns; and cleaning gloves should be worn when using chemicals for cleaning to help prevent chemical burns.
- **turn cooking equipment handles to the centre of the stove top**
All pot and pan handles need to be turned to the centre of the stove top to prevent people accidentally knocking them over and possibly scalding someone.
- **do not drop food into the fryer**
Dropping food into a fryer will cause hot oil to splash and can scald people nearby.
- **stand to the side when opening ovens, dishwashers and steamers**
A burst of hot air or steam released on opening can scald the operator.
- **monitor cooking**
Ensure that food that is cooking, particularly in hot oil, is not left unattended. Hot oil and food can burst into flames if not monitored.
- **open lids away from your body**
Open lids away from the body to avoid scalding.
- **report faulty equipment**
Faulty equipment such as frayed electrical cords and power sockets need to be reported to the line manager.
- **check that coffee machines have finished**
When using coffee machines, ensure that the machine has finished dispensing coffee. Many workers are scalded by boiling water when they try to remove the cup before the machine has finished dispensing the coffee.

Conclusion

It is very important to follow safety procedures in the workplace. Thousands of young workers are injured every year. Don't put yourself or fellow staff at risk of being injured. By ensuring that everyone knows how to keep workplaces safer, the risk of injury is reduced greatly.

Reading and comprehending

Question 1

- (a) What is the purpose of this text? (2 marks)

The purpose of this text is to let people know the risk of working in food services. It also is to let people know how to ~~look~~ out stop work injuries

- (b) Who is this text written for? (2 marks)

The text is written for anyone working in a place that can hurt you or others, but many for food services people

- (c) State the **three** reasons given by the author in paragraph 1 on page 3, to follow safety procedures. (3 marks)

One: ~~the~~ to prevent thousands of young workers being injured
Two: Insurance companies pay out millions of dollars in compensation claims
Three: Employers have to allow for these injured workers to have time off

- (d) According to Figure 1 on page 3, what percentage of injuries in the workplace was reported by young workers in the accommodation and food services industries? (1 mark)
- 28%

- (e) Give **two** reasons why young workers in the accommodation and food services industries have the highest rate of injuries. (2 marks)

One: Young workers are exposed to high range of hazards in kitchen and cafe
Two: ~~Most~~ Almost half of the reports are burn or scald No other work place on chef has that risk

- (f) Explain the difference between a burn and a scald. (2 marks)

A burn: Burns are caused by contact with hot surfaces, hot objects and open flames, such as ovens and hot plates

A scald: scalds are caused by contact with hot fluids, such as boiling water and steam

- (g) What injuries are prevented by wearing oven mitts and cleaning gloves? (2 marks)

Oven mitts: Burns from coming in contact with hot surfaces

Cleaning gloves: Chemical burn when cleaning

- (h) Why do you think it's important to report electrical faults to the manager? (1 mark)

I think it is important to report electrical faults to the line ~~manager~~ managers because it may not hurt you but you help someone ~~else~~

Producing text

Question 2

(15 marks)

Choose an industry from Figure 1 on page 3, that you would **most** or **least** like to work in. Explain exactly what you have to do in this type of work and give reasons why you **do** or **do not** want to work in this industry.

Remember to:

- plan your response before you start
- state your opinion clearly
- describe your job and the duties you have to perform
- explain the advantages or disadvantages of working in the chosen industry; support your points with evidence
- write persuasively, making sure that your attitude to that type of work is clear
- check your work for errors.

The reason I would not want to work in accommodation and food services is because of the high risk low reward you get. ~~to be~~

In the food services you are running around the kitchen with hot food or fluids trying to get food and drinks ready for people ~~but~~ with low pay and long hours. One of the reasons why I would ~~not~~ like to work in food services is long hours and low pay, you might start work at 6pm and finish 2am with like a low pay but people working construction working same amount of hour just in the morning getting a lot better pay.

Another reason why I would not like to work in the food services industry is the risk to burns and scalds being very high. There is a 28% ~~injury~~ injury in the workplace with almost half being burns or scalds. Burns or scalds have a very high chance of affecting your whole life. Not only is the food services one of the high industry injuries workplaces for people under the age of 25 years old the injuries that you are most likely to get working are very likely to stay your whole life.

~~There are~~

One of the advantages of working in the food services workplaces is the changes to see different types of foods and drinks you are able to make. Disadvantages or high risk of the changes to get work injuries that are there your whole life.
