

Albert the Astronaut

*Unfortunately
Albert's calculator
is in a
geostationary orbit
around Earth after
he dropped it on a
space walk!*

Albert is calculating how many times he will orbit the Earth during his 114.1 hour stay on the International Space Station. It orbits the Earth every 0.7 hours, so how many time will he complete an orbit?

Boris the Baker

*Unfortunately
Boris baked his
calculator after his
dozy apprentice
Bernard left it on
the donut tray.*

Boris is working out how much to charge Mrs Smith, who bought 12 cupcakes at £1.34 each and 9 donuts at £0.56 each. How much change will Mrs Smith get from £30?

ABCW Presents...

Charlie the Channel Swimmer

*Unfortunately
Charlie's calculator
got dropped in a
vat of goose fat on
her last attempt!*

Charlie is working out how far she has actually swam on her 34 channel swims. The English Channel measures 21.2 miles at its shortest width which is the route Charlie takes. How far has she swam?

abcw presents

Derek the Dentist

*Unfortunately
Derek's nurse
Dorothy spilled
some false teeth
cleaner over the
office calculator!*

Derek is working out how much more of Mr Jones' rotten tooth could still lie within his gum after it broke as he pulled it out. The fragment he pulled out was 0.74cm long and the average tooth length is 3.4cm. How much more does he have to dig out?

ABCW Presents...

Egbert the Engineer

*Unfortunately
Egbert's calculator
was crushed by the
ball bearing
machine!*

Egbert is trying to work out how many more ball bearings he can make from the 67.92kg of steel he has left. Each ball bearing weighs 0.12kg on average, so can he satisfy his customer who has just ordered 570?

abcw presents

Florence the Financial Advisor

Florence is advising a client who is making an investment. The investment is worth £34.56 every month for the next 2 years. How much is the investment worth in total, given that Florence will charge her client £69 for the advice?

*Unfortunately
Florence had to sell
her calculator to
make ends meet!*

Gerard the Gym Instructor

Gerard is trying to work out how much weight he is lifting. He has four 2.6kg weights as well as six 5.6kg weights on the bar he is lifting. Has he reached his target of being able to lift 50kg?

*Unfortunately
Gerard dropped a
dumbbell on his
calculator!*

Ingrid the Interior Designer

Ingrid is working out the area of four walls which she needs to paint. Each wall measures 10.4m by 2.3m. What is the total area of the walls in this square room?

*Unfortunately
Ingrid dropped her
calculator in a pot
of paint!*

Judy the Juggler

Judy is working out how many times a ball will complete a circuit in her one minute juggling routine. Each circuit takes 1.2 seconds, so how many circuits will in complete in her routine?

Ironically Judy dropped her calculator and broke it!

Kevin the Kayak Instructor

Kevin is calculating the cost of buying a new fleet of kayaks for his 15 strong group of learner kayakers. If Each kayak costs £234.90 plus a one off delivery charge of £35.99, what is the total cost?

*Unfortunately
Kevin's calculator
got washed down
the river!*

Leona the Lorry Driver

Leona is working out how many crates she can safely load onto her lorry. Her lorry can hold a maximum of 5 tonnes and each crate weighs 0.3 tonnes. Can she take the consignment of 18 crates in one trip?

*Unfortunately
Leona ran over her
calculator in her
lorry!*

Marty the Mechanic

*Unfortunately
Marty's fingers are
too oily to press the
buttons on his
calculator!*

Marty is trying to tell a customer how much further she can drive before her next service. The service must take place after the car has done 50000miles and currently the odometer reads 49869.5miles. How many more times can the customer make her commute of 0.9 miles before the service?

ABCW Presents...

Harold the Hairdresser

*Unfortunately
Harold's calculator
was ruined by a
freak bleach
spillage.*

Harold needs to work out the profit he will receive from one customer's appointment. He charges her £55 but spends £22.56 on hair products during the course of the appointment. How much profit will he make?

abcw presents

ABCW Presents...

Nelly the Naval Officer

Nelly's calculator was unfortunately stolen by her elderly superior who mistook it for his mobile phone.

Nelly is calculating the total weight of the torpedoes being delivered to her submarine for buoyancy purposes. She knows each torpedo weighs 3.56 tonnes and there are 8 torpedoes being delivered. How much extra weight in total should she allow for?

abcw presents

ABCW Presents...

Ollie the Optician

Rather ironically, Ollie cannot use his calculator because his poor eyesight means he cannot read the small display. Maybe he needs a trip to the opticians...

Ollie is trying to work out a patient's final bill. Her new glasses cost her £220.50, her appointment cost £17.60 and she is treating herself to a new glasses case at £7.95. What is the final bill Ollie should present her with?

abcw presents

ABCW Presents...

Peter the Paramedic

*Unfortunately
Peter zapped his
calculator with the
defibrillator and it
is no longer
working.*

Peter needs to work out how many doses of morphine he has left in his ambulance. He has a 550ml bottle left and knows that each dose is 2.6ml. How many more doses can he give before he runs out?

abcw presents

ABCW Presents...

Quentin the Quarryman

*Unfortunately
Quentin dropped
his calculator and
his 'friend' Quincy
destroyed it with a
pneumatic drill.*

In Quentin's quarry there is a minimum depth which needs to be drilled each day in order to get paid. This depth is 16.7m, and before lunch Quentin drilled 6.78m. How much further does he have to drill to make sure he is paid?

abcw presents

ABCW Presents...

Roger the Rugby Player

*Unfortunately
Roger left his
calculator in his
pocket during a
scrum, big mistake!*

Roger is trying to work out the area of his rugby pitch in order to see how much weed-killer he needs to buy (he's sick of getting stung by thistles during rooks!) He measured it to be 133.4 yards long and 74.3 yards wide. What is the area in square yards?

abcw presents

ABCW Presents...

Sally the Stuntwoman

Sally has 6.9kg of TNT. Each explosion which the director wants her to jump her motorcycle over requires 0.3kg of TNT in order to ensure it looks 'death defying' enough. How many more takes can Sally afford to perform?

Unfortunately Sally destroyed her calculator in a freak TNT accident.

abcw presents

ABCW Presents...

Tony the Taxi Driver

As well as losing his calculator, Tony's fare machine is on the blink. He charges £2.30 for every mile and he has just driven a customer 6.7 miles. How much should he charge?

Unfortunately Tony's calculator has dropped underneath his driver's seat and he is too lazy to reach for it.

abcw presents

ABCW Presents...

Umberto the Umpire

*Unfortunately
Umberto left his
calculator back in
the pavilion!*

The batting team need 75 runs to win. The batsman ask Umberto if their current run rate, 5.67 runs per over, is enough to win in the 13 overs remaining. At this rate, will they get the 75 runs remaining? (multiply the run rate by the number of overs left).

abcw presents

ABCW Presents...

Victor the Veterinarian

*Unfortunately
Victor's calculator
was trodden on by
an angry horse.*

Victor is trying to find the average weight of a litter of kittens that he has just delivered. The scales are not sensitive enough to weigh each kitten individually, so he weighs all 7 together and it comes to 23.8 ounces. How much on average does each kitten weigh?

abcw presents

ABCW Presents...

Wendy the Wedding Planner

Wendy is calculating the total cost of her wedding breakfast for her 142 guests. The hotel will charge her £34.50 for each person dining; what is the total cost of the meal?

Unfortunately due to the astronomical cost of Wendy's wedding she cannot afford a calculator!

abcw presents

ABCW Presents...

Xander the X-ray Technician

*Unfortunately
Xander's calculator
was fried when he
left it near the X-
ray machine!*

Xander is working out how many more X-rays he can perform before recharging the machine. Each X-ray needs 0.6kJ of energy and his machine has 13.8kJ of charge left. How many more X-rays can Xander carry out today?

abcw presents

ABCW Presents...

Yogi the Yachtsman

*Unfortunately
Yogi's calculator is
at the bottom of
the English
Channel!*

Yogi is working out the weight of his yacht now he has upgraded to a new mast. His yacht weighted 5.636 tonnes before he changed and the new mast was advertised as a weight saving of 0.834 tonnes. How much does his yacht weight now?

abcw presents

ABCW Presents...

Zelda the Zoologist

Zelda is working out how much it will cost to kit out all of the zoo's zebras with a nice fleece to keep them warm during the winter. A black-and-white striped fleece costs £34.80 and there are 16 zebras in total. How much will it cost altogether?

Unfortunately some cheeky monkeys wanted to see what was inside Zelda's calculator so they smashed it with a rock!
