

- Perform the operations within **brackets** first.
- Calculate any part involving **exponents**.
- Starting from the left, perform all **divisions** and **multiplications** as you come to them.
- Restart from the left, performing all **additions** and **subtractions** as you come to them.

- If an expression contains *one set* of brackets, evaluate that part first.
- If an expression contains *two or more sets* of brackets one inside the other, evaluate the *innermost set* first.
- The division line of fractions also behaves as a grouping symbol. This means that the numerator and the denominator must be found separately before doing the division.

- If an expression contains *one set* of brackets, evaluate that part first.
