

Surface Area - Square & Rectangular Pyramids

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS ALTITUDE BOOK 2 - LICENSED FOR NON-COMMERCIAL USE

Find the surface area of the Square Pyramids first shown as nets.

$$SA = \square^2 + 4 \times \frac{1}{2} \times \square \times \square$$

Area of Square + Area of 4 triangles

$$SA = \square \text{ m}^2$$

$$SA =$$

$$SA = \square \text{ mm}^2$$

$$SA =$$

$$SA =$$

$$A$$

$$B$$

$$C$$

Rectangular pyramids have two matching pairs of triangles and a rectangular base.

$$SA = \square \times \square \text{ Area of Rectangular Base}$$

$$+ 2 \times \frac{1}{2} \times \square \times \square \text{ Area of 1st pair of } \Delta\text{'s}$$

$$+ 2 \times \frac{1}{2} \times \square \times \square \text{ Area of 2nd pair of } \Delta\text{'s}$$

$$SA =$$

$$A$$

$$B$$

These are a mix of Square and Rectangular based pyramids. Find the SA.

8 Square Pyramid with a slant height of 19 cm and a base side length of 8 cm.

9 Net - Find assembled SA.

10 Square Pyramid with a slant height of 46 m and a base side length of 27 m.

11 Find the cost to anodise the Aluminium seed hopper shown if the process costs \$11.35/m² of the external SA. (To nearest m²)
