Question 1

On a certain day the minimum temperature at a mountain resort was -13°C .
On the same day the temperature increased to a maximum of -11°C .

What was the difference between the minimum and maximum temperatures?

-24°C
☐

-2°C
☐

2°C
☐

24°C
☐

Answer: 2°C

Skill: Students compare the size of integers.

Additional questions

1. If the minimum temperature was -13.5°C and the maximum was 11°C , what would the difference be?
2. If the minimum temperature was -13°C and the maximum was -11.5°C , what would the difference be?
3. If the minimum temperature was -13.5°C and the maximum was 11.5°C , what would the difference be?

Question 2

Which of the following is **not** true?

☐ $-5 + -3 = -3 + -5$

☐ $-(5 - 3) = -(5 + -3)$

☐ $-5 + -3 = -3 - -5$

☐ $5 - 3 = -(3 - 5)$

Answer: C

Skill: Students add and subtract and use the rule of order with integers

Additional questions

Simplify each of the following:

1. $-6 - (-5)$

2. $-(-6 + -5)$

3. $-(-5 - -6)$

Question 3

Which of the following is true?

- ☐ $-5 \div -3 = -3 \div -5$
- ☐ $-5 \times -3 = -3 \times 5$
- ☐ $-5 \div -3 = 5 \div 3$
- ☐ $-5 \times -3 = -(3 \times 5)$

Answer: C

Skill: Students multiply and divide and use the rule of order with integers

Additional questions

Simplify each of the following:

1. $-6 \times (-5)$
2. (-6×-5)
3. $(-5 \div -6)$

Question 4

Which of the following does **not** have the same value as the other expressions?

- ☐ $-(-8)^3$
- ☐ $-8 \times -8 \times -8$
- ☐ $-(8)^3$
- ☐ $-8 \times (-8)^2$

Answer: A

Skill: Students use positive indices with integers.

Additional questions

Determine the value of:

1. $(-4 + 5)^2$
2. $(4 + -5)^2$
3. $4^2 + 5^2$
4. $(-4)^2 + (-5)^2$

Student activity: Integers
