

Index.

Algorithms 18

- Hungarian 152, 153
- Kruskal's 103
- Prim's 102–3, 107–9
- for solving allocation problems 148–54

Allocation problems 143–5, 164

- algorithm for solving 148–54
- allocating for a maximum 145–6, 153–4
- allocating for a minimum 144–5, 146, 148–52
- cost matrix 148–52
- four machines, four tasks 146
- number of people $\neq$ the number of tasks 159–61
- square matrix 159–61

Amortization calculators 83

Annuities 89–91

- frequency of payments, frequency of compounding 94–6
- indexed 90

Arcs 11, 117

Arithmetic sequences (arithmetic progressions) 10

Assignment problems 143–164

Association between variables 13, 15

Average percentage method 48–9

Backward scan (project networks) 126

Bipartite graphs 12, 13, 144

Bivariate data 13

Borrowings 76–9

Calculators

- annuities 89, 94–6
- compound interest 67, 72–4, 78–9
- geometric sequences 17–18
- superannuation 88

Centred moving averages 42–3

Coefficient of determination 15

Common difference 10

Common ratio 10

Compound interest 10, 66–7

- depreciation 76–7
- effective annual interest rate 70–1
- initial deposit plus regular investments 72–4
- loans 76, 77–9

Correlation 14

Correlation coefficient 15

Cost matrix (allocation problems) 148–52

Critical path 126–8

- float or slack 126–7

Cuts, maximum flow 121

Dependent variable 13

Depreciation 76–7

Deseasonalised data 53–7

Directed edges 11

Drawing down the investment

- annuities 89–91
- perpetuities 91
- superannuation 87–9

Earliest start time 126, 127

Edges 11

Effective annual interest rate 70–1

Explanatory variable 13

Extrapolation 15, 20

Finance, and moving averages 46

Fixed term annuities 89

Flat rate method 76

Float 126, 127

Forward scan (project networks) 126

4 point moving average 36, 42

Geometric sequences (geometric progressions) 10, 17–18

Graphs *see* networks

Housing loans, affordability 82–3

Hungarian algorithm 152, 153

Increasing trend 21

Independent variable 13

Initial deposit plus regular investments 72–4

Interpolation 15, 20

Investments

- compound interest 66–7, 70–1, 72–4, 98
- simple interest 65–6
- see also* annuities; perpetuities; superannuation

Kruskal's algorithm 103

Latest start time 126, 127

Life annuities 89

Line of best fit 14

Line graphs 21

Linear equations 9

Linear regression 14, 22–3

Linear relationships 8

Loans 76

- with regular payments 77–9
- what price house can people afford? 82–3

Making predictions

- seasonally adjusted data 54–7
- time series data 22–6

Maximum, allocating for a 145–6, 153–4

Maximum flow 115

- equals the minimum cut 121
- systematic approach 116–18, 121

Minimum, allocating for a 144–5, 146, 148–52

Minimum completion time 126, 127

Minimum cut 121

Minimum spanning trees 101

- from distances table 107–9
- Kruskal's algorithm 103
- Prim's algorithm 102–3, 107–9
- systematic approach 102–3

Moving averages 34–6, 40

- centred 42–3
- and finance 46
- seasonal effects 47–9
- and seasonally adjusted data 53–7
- use of spreadsheets 41

Networks 11–13

- maximum flow 115–18, 121
- minimum spanning trees 101–3, 107–9
- project networks 125–8

Nominal annual interest rate 70

Number 7

Pearson's correlation coefficient 15

Percentages 7–8

Perpetuities 91

Positive linear correlation 14

Prim's algorithm 102–3, 107–9

Project networks 125–8

- constructing 133–4
- critical path 126–8
- earliest start time 126, 127
- latest start time 126, 127
- minimum completion time 126, 127
- systematic approach 126–8

Real interest rate 72

Recursion 10–11, 17–18

Recursive rules 10, 11

- annuities 90, 94–6
- for simple and compound interest 67, 78–9
- superannuation 88

Reducing balance method 76

Regression 14–15, 22–3

Response variable 13

Scattergraphs 14

Seasonal effects 25, 34

quantifying 47–9

Seasonal indices 47–9

Seasonally adjusted data 53–4

making predictions 54–7

Simple interest 10, 65–6, 68

Simultaneous equations 9

Sink (maximum flow) 115, 116

Slack 126, 127

Smoothing data 34–6, 40

Solving equations 9

Source (maximum flow) 115, 116

Spanning trees 101–3, 107–9

Spreadsheets

- compound interest 72–4, 78
- geometric sequences 16–17
- moving averages 41

Square matrix (allocation problems) 159–61

Statistical investigation process 18, 20

Straight line graphs 8

Superannuation 87–9

- accumulation phase 88
- pension phase 88

Technology use 16–18

3 point moving average 34–5

Time series data 19–22, 30–1

- general smoothing 40
- making predictions 22–6
- seasonal variation 25

Total float 127

Trees 12

spanning 101

Trend line 14

making underlying trends more apparent 34

Underlying trends 34

Unit cost method 76

Vertices 11

Whole life annuities 89
