

Index.

- Adjacency matrices 144–5
- Adjacent vertices 123, 126
- Arcs 120
- Arithmetic sequences (arithmetic progressions) 88–90
 - growth and decay 101
 - jumping to later terms 97–100
 - recurrence rules 107–8
- Association between variables 18, 32
- B**
- Bipartite graphs 133
- Bivariate data 8, 15–35, 41–65
 - trimming or cropping 62
- Bridge 125, 127
- C**
- Categorical data 8
- Categorical variables 8, 9
- Cause and effect 51
- Closed path 122, 126
- Closed trail 127
- Closed walk 122, 126
- Coefficient of determination 48, 64–5
- Coincidence 51
- Column graphs
 - proportional 17, 18, 19, 25, 26
 - stacked 100% 17
- Column matrix 12
- Column percentages 17–20, 25–6
- Common difference (arithmetic sequence) 88
- Common ratio (geometric sequence) 91
- Complete graphs 125, 127
- Confounding variable 51
- Connected graphs/networks 123–4, 125, 127
- Connected vertices 123, 127
- Continuous data 9
- Continuous variables 9
- Coordinates 10
- Correlation 32, 41–2
- Correlation coefficient 48, 49
 - calculation 52–3
 - strong, moderate or weak relationship 52
- Covariance 53
- Cropping data 62
- Cycle 122, 126, 140
- D**
- Data 8–9
- Degree of a vertex 138
- Dependent variable 24, 33
- Diagonal matrix 12
- Difference rule for the sequence 76
- Digraphs 120, 126
- Dimensions of the matrix 12
- Directed edges 120
- Directed graphs/networks 120, 124, 126, 138, 145
- Disconnected graphs/networks 123, 127
- Discrete data 9
- Discrete variables 9
- E**
- Edges 112, 119, 126, 132
 - directed 120
 - multiple 119, 126
- Elements 12
- Equal matrices 13
- Eulerian circuit 140
- Eulerian trail 140
- Euler's rule 116, 132
- Even vertices 138
- Explanatory variable 24, 33
- Exponential graphs 91
- Exponential growth 101
- Extrapolation 34, 35, 43
- F**
- Faces 112, 126, 132
- First order linear recurrence relations 107–8
- G**
- Geometric sequences (geometric progressions) 88, 91–3
 - growth and decay 101–2
 - jumping to later terms 100–1
 - recurrence rules 107–8
- Graph theory (networks) 118–27, 131–3, 138–40
- Graphs 118, 126
 - bipartite 133
 - complete 125, 127
 - connected 123–4, 125, 127
 - directed 120, 121, 126, 138, 145
 - disconnected 123, 127
 - Eulerian 140
 - Hamiltonian 140
 - non-directed 120
 - planar 131–2
 - semi-Eulerian 140
 - simple 121, 124–5, 126, 133
 - undirected 120, 121, 127, 138, 144–5
 - weighted 119, 126
 - see also* subgraphs
- Growth and decay 101–2
- H**
- Hamiltonian cycle 140
- Hamiltonian path 140

Independent variable 24, 33

Interpolation 34, 35, 43, 50

Least squares regression line of y on x 54–5

Length of path 122, 127

Length of walk 122

Line of best fit 33, 41–2, 49, 54

Linear correlation 42

Linear equations 11

Linear growth 101

Linear models 33, 34

Linear regression 43–4, 49

Linear regression residuals 54

Loops 119, 126

Lurking variable 51

Matrices 12

adding or subtracting 13

adjacency 144–5

multiplying by a scalar 13

multiplying together 13–14

and networks 14, 144–5

Mean 10

Measures of central tendency 10

Measures of dispersion 10

Median 10

Mode 10

Multiple edges 119, 126

Negative correlation 41, 42

Networks 111–13, 126, 139–40

connected 123–4

directed 124

disconnected 123

Euler's rule 116, 132

graph theory 118–27, 131–3, 138–40

and matrices 14, 144–5

planar 131–2

shortest path 151–4

simple 121, 124–5, 126, 133

traversability 116–17, 138–9

weighted 119, 126

Nodes 112

Nominal categorical variables 8, 9

Non-directed graphs 120

Number 7

Numerical data 9, 16

Numerical variables 9

Odd vertices 138

Open path 122, 126

Open walk 122, 126

Order of a vertex 138

Ordinal categorical variables 8, 9

Outliers 61

Path 122, 126–7, 140

Pearson's correlation coefficient 48

Percentages 7

row and column 17–20, 25–6

Planar graphs/networks 131–2

Euler's rule 132

Positive correlation 41, 42

Primary data 8

Progressions

arithmetic 88

geometric 91

Proportional column graphs 17, 18, 19, 25, 26

Quadratic regression 68

Range 10

Recursive rules 75–80

Regions 112, 126

Regression line 49, 54

x on y 55

y on x 54–5

see also line of best fit

Residuals 54, 63

Response variable 24, 33

Row and column percentages 17–20, 25–6

Row matrix 12

Scattergraphs 16, 32–5, 41

cause and effect 51

and coefficient of determination 64–5

and correlation 41–2

and correlation coefficients 48, 49, 52

line of best fit 33, 41, 42, 49–50, 54–5

and outliers 61

reliability of our predictions 34–5, 50

residual plots 63

trimming or cropping data 62

Second-order linear recurrence relations 107

Secondary data 8

Semi-Eulerian trail 140

Semi-Hamiltonian graph 140

Sequences

arithmetic 88–90, 97–100, 101

difference rule 76

geometric 88, 91–3, 100–2

recursive rules 75–80

terms of 75–6

using spreadsheets 84

Shortest path 151–2

systematic approach 152–4

Simple graphs/networks 121, 124–5, 126, 133
Simultaneous equations 11
Size of the matrix 12
Solving equations 11
Square matrices 12
Stacked 100% column graph 17
Standard deviation 10
Statistical investigation process 10
Straight line graphs 11, 88
Subgraphs 132

Terms of a sequence 75–6
Trail 127, 140
Traversability (networks) 116–17, 138–9
Trees 133
Trimming data 62
Two way frequency table 16–17, 18, 19

Undirected graphs/networks
120, 121, 126, 138, 144–5
Univariate data 8

Variables 8–9
association between 18, 32
confounding 51
explanatory 24, 33
form, direction and strength of relationship 42
response 24, 33
strong, moderate or weak relationship 52
Vertices 112, 119, 126
adjacent 123, 126
connected 123, 127
degree or order 138
faces and edges, and Euler's rule 116, 132

Walk 122, 126
Weighted graphs/networks 119, 126
