

# **DRAFT SAMPLE EXAMINATION MARKING KEY**

DRAFT

**SECTION ONE**  
**PART A: MULTIPLE-CHOICE**

| Question    | Answer |                                                                                                   | Marks |
|-------------|--------|---------------------------------------------------------------------------------------------------|-------|
| 1           | D      | all of the above                                                                                  | 1     |
| 2           | C      | heredity and environment interact to influence behaviour                                          | 1     |
| 3           | B      | different theories have addressed different aspects of development                                | 1     |
| 4           | A      | orderly                                                                                           | 1     |
| 5           | C      | development proceeds in random patterns                                                           | 1     |
| 6           | B      | the ability to think about thinking                                                               | 1     |
| 7           | A      | an abnormal, obsessive concern with issues of personal identity                                   | 1     |
| 8           | A      | women remaining in the workforce, increased divorce rate and later partnering                     | 1     |
| 9           | A      | planning, organising and managing a sequence of tasks and available human and non-human resources | 1     |
| 10          | B      | empowerment or advocacy                                                                           | 1     |
| 11          | D      | organised, assertive, able to compromise and a good listener                                      | 1     |
| 12          | B      | laws are enforced in a caring manner                                                              | 1     |
| 13          | C      | microsystem                                                                                       | 1     |
| 14          | B      | acquired or learned skills                                                                        | 1     |
| 15          | C      | a good listener, clearly state your needs, cooperative and assertive                              | 1     |
| Total marks |        |                                                                                                   | 15    |

**PART B:****Question 1****Part (a)**

| Description                                                                                                                                                           | Marks |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| Clearly explains three beliefs about development and changes and gives a relevant example of each.                                                                    | 10–12 |
| Briefly explains three beliefs about development and changes and gives a relevant example of each.                                                                    | 7–9   |
| Unclear explanation of fewer than three beliefs about development and changes OR gives an example only of fewer than three assumptions about development and changes. | 3–6   |
| Some evidence of explaining one beliefs only                                                                                                                          | 1–2   |

Examples of suitable answers:

Students will identify three (3) of Piaget's beliefs about development and changes and give an example for each.

| BASIC ASSUMPTIONS ABOUT DEVELOPMENT AND CHANGES                                                                                                                           | EXAMPLES                                                                                                                                                                                                                     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Piaget believed children are actively involved in constructing their understanding of the world based on their experiences.                                               | She was nice to me last time I played with her; she shared her toys with me.<br>A teenager never wants to go to Iran, as he believes he will probably get shot, based on media viewing experiences.                          |
| Development occurs in four sequential, age related stages.                                                                                                                | In an infant reflex actions are gradually replaced by goal-directed activity. If a child is not ready to read no amount of adult intervention will make this occur more rapidly.                                             |
| Piaget believed that children do not think in the same way as adults and that at each stage children use different cognitive processes and skills to construct knowledge. | A three-year-old may reason that the car was hurt as it was involved in an accident. A young child will believe that if he cannot see his mother she has gone away and will not come back.                                   |
| New knowledge is built on existing knowledge.                                                                                                                             | A young child sees the world as it is.<br>A teenager sees the world not only as it is, but how it could be.                                                                                                                  |
| Mental functioning is seen as the most important factor in determining behaviour.                                                                                         | Young pre-schoolers have a limited ability to understand things from another person's perspective, they think in terms of themselves. Older children begin to become aware that others have different thoughts to their own. |
| Qualitative change occurs as a result of maturation in thinking.                                                                                                          | A child will use imagination and language to extend their thinking abilities and understand the world around them. A teenager will develop abstract thinking and consider possibilities and solutions.                       |

**Part (b)**

| Description                                                                                                                   | Marks |
|-------------------------------------------------------------------------------------------------------------------------------|-------|
| Accurately identifies four ages and stages and gives full details of relevant characteristics.                                | 10–12 |
| Accurately identifies four ages and stages, gives details of relevant characteristics but does not define each stage clearly. | 7–9   |
| Accurately defines fewer than four ages and stages but gives inaccurate details of characteristics.                           | 4–6   |
| Partially fills in some of the table.                                                                                         | 1–3   |

Examples of suitable answers: age group, including those with additional needs.

| Stage Age               | Name of the stage                | Characteristics of the individual                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------------------|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Stage 1<br>Birth–1 year | Trust<br>vs<br>Mistrust          | Infants need to learn to trust that their caregivers will take good care of them in order to develop a sense of trust in other people. If an infant is neglected or rejected by their caregivers they will find it difficult to trust others.                                                                                                                                                                                                 |
| Stage 2<br>1–3 years    | Autonomy<br>vs<br>Doubt          | Children are developing new cognitive, language and motor skills. They use these skills to express what they want and insist on doing things themselves. They are becoming independent, however if they are punished for doing something wrong they doubt their competence.                                                                                                                                                                   |
| Stage 3<br>3–6 years    | Initiative<br>vs<br>Guilt        | When pre-schoolers have a sense of autonomy they can make plans and carry them out, at the same time learning that other children have rights too e.g. using their new motor skills to build things. Developing fantasy play helps them develop initiative and feel pride in achieving their goals.                                                                                                                                           |
| Stage 4<br>6–12 years   | Industry<br>vs<br>Inferiority    | Children have a desire to learn and master a wide range of new skills and to control their environment. They are learning and mastering intellectual and social skills and want to gain approval from adults and peers. Continual failure of tasks that are too easy can lead to a child developing a sense of inferiority. If children fail to develop initiative and industry, they will find it difficult to achieve tasks in adolescence. |
| Stage 5<br>12–20 years  | Identity<br>vs<br>Role confusion | This is a critical stage in forming an identity for an individual. Adolescents are trying to work out who they are and where they fit into society. Experimentation process occurs with trying new things, different looks, ideas and friendships.                                                                                                                                                                                            |
| Stage 6<br>20–40 years  | Intimacy<br>vs<br>Isolation      | This is the age when a person forms an intimate relationship with a person. If a person has still not discovered their identity, it may be difficult to form an intimate relationship with another person, therefore feeling a sense of loneliness and isolation.                                                                                                                                                                             |
| Age<br>Stage            | Name of the stage                | Characteristics of the individual                                                                                                                                                                                                                                                                                                                                                                                                             |
| Stage 7<br>40–65 years  | Generativity<br>vs<br>Stagnation | Middle-aged adults need to feel they have produced something worthwhile e.g. raising children, having a successful career, travelling or volunteer activity. If they resolve this issue they will be concerned about future generations rather than becoming self-centred.                                                                                                                                                                    |

|                             |                            |                                                                                                                                                                                                                                                                |
|-----------------------------|----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Stage 8<br>over 65<br>years | Integrity<br>vs<br>Despair | If older people look back over their life and view it as being meaningful they will find it easier to face getting old and death. If they cannot do this they may have regrets or bitterness and thus have difficulty in preparing for death and feel despair. |
|-----------------------------|----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Part (c)

| Description                                                                                                                                                         | Marks |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| Constructs an accurate diagram, correctly places and names four systems and gives three correct examples of whom or what is represented in each system.             | 10–12 |
| Constructs an accurate diagram, correctly places and names three systems and gives fewer than three correct examples of whom or what is represented in each system. | 7–9   |
| Attempts to construct a diagram, correctly places and names two systems and gives a correct example of whom or what is represented in each system.                  | 4–6   |
| Constructs a diagram with the correct sub systems only.                                                                                                             | 1–3   |
| Fails to construct the diagram or give accurate examples.                                                                                                           | 0     |

Examples of suitable answers:

Students will draw their own model illustrating Bronfenbrenner's theory.

Systems:

Microsystem: includes mother, father, siblings, extended family, day-care.

Mesosystem: includes school, neighbourhood, peer group, sporting, hobby groups or religious groups.

Exosystem: includes local government, family social networks, mass media, business community, sporting organisations, local industry, parents, workplaces.

Macrosystem: cultural beliefs in society, society's attitudes and expectations of adolescents, political beliefs in society, historical events, laws and regulations in society.

An illustration:

**Part (d)**

| Description                                                                                                      | Marks |
|------------------------------------------------------------------------------------------------------------------|-------|
| Provides an example of a case study, lists, in order, the six steps in the process and gives an example of each. | 7–9   |
| Provides an example of a case study, lists, but not in order, the six steps and gives an example of each.        | 4–6   |
| Provides an example of a case study, lists not fewer than four steps and gives an example of each.               | 1–3   |
| Is unable to describe the process.                                                                               | 0     |

Examples of suitable answers:

Answers may be in the context of an example where a student has used the process.

| STEPS                                                | EXAMPLES                               |
|------------------------------------------------------|----------------------------------------|
| Discussion an initial reaction to practices/beliefs. | Discuss reactions to practices/beliefs |
| Exploration of practices/beliefs.                    | Discuss and analyse what is happening. |

|                                                |                                                                   |
|------------------------------------------------|-------------------------------------------------------------------|
| Consideration of issues of ethics and justice. | Should it be happening? Who benefits?                             |
| Consideration of alternative value positions.  | Consider the views of a range of people.                          |
| Adoption and defence of a value position.      | Identify and explain your own position.                           |
| Action planning.                               | Consider the actions to be taken to make a positive contribution. |

**END OF SECTION ONE**

**SECTION TWO—SHORT ANSWER**  
**CONTEXT: CARING FOR OTHERS**

**Question 1**

**Part (a)**

| Description                                        | Marks |
|----------------------------------------------------|-------|
| Clearly defines all four areas of development.     | 4     |
| Two–three areas clearly defined.                   | 2–3   |
| Brief definition of all four areas of development. | 1     |

Suitable definitions will have information related to the following:

**Physical**

- increase in complexity of body systems OR
- increased and specialised functioning of tissues in the body OR
- closely related to growth, involves motor development, coordination, manipulative skills

**Intellectual**

- development of brain and intellect OR
- increase in ability to think and reason occurs as a result of interaction with the environment

**Social**

- learning of skills and attitudes that enable individuals to live easily with others in their community OR
- a process by which knowledge behaviours and the transfer of ideas are learnt through interactions with others

**Emotional**

- progressive change in ability to control moods and feelings OR
- learning of appropriate responses to happenings around us, basis of interactions and bonds with others

**Part (b)**

| Description                                                                                                                                                                                                                                 | Marks |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| Clearly explains the relationship between nature and nurture and links to genetic and environmental influences. Provides at least 2 reasons for a debate about the theory. Gives examples of nature and nurture that influence development. | 5–6   |
| Brief explanation of relationship between nature and nurture does not link to genetic and environmental influences. Provides one reason for the debate .Gives examples of influences of nature and nurture on development.                  | 3–4   |
| Unclear, incomplete explanation of relationship between nature and nurture, does not link to genetic and environmental influences. Does not provide a reason for the debate. Does not give examples.                                        | 1–2   |
| Unsatisfactory answer.                                                                                                                                                                                                                      | 0     |

Suitable answers will include information related to the following statements:

- Nature refers to the genetic influences on growth and development e.g. genes, hormones.
- Nurture refers to the environmental influences on growth and development e.g. culture, nutrition.
- Nature and nurture both contribute to human variation.
- Nature and nurture influence human development from the time of conception.
- Influence of nature cannot be changed; influence of nurture can be changed to affect development.

Examples:

- Parents who are musically or artistically talented and bring up children in an artistic environment are likely to see their children develop similar talents.
- Fraternal twins that are reared under the same conditions would be alike, regardless of differences in their genes. But, studies have shown they do more closely resemble each other than do non-twin brothers and sisters, they also show these same striking similarities when reared apart—as in similar studies done with identical twins.
- 
- 

Reasons for a debate about the nature nurture theory:

- Some scientists think that people behave as they do according to genetic predispositions or even animal instincts. This is known as the –nature theory of human behaviour. Other scientists believe that people think and behave in certain ways because they are taught to do so. This is known as the –nature theory of human behaviour.
- We do not yet know how much of what we are is determined by our DNA and how much by our life experience.
- The search for behavioural genes is the source of constant debate. Many fear that genetic arguments might be used to excuse criminal behaviour or justify separation and divorce.
- 
- 
- 

**Part (c)**

| Description                          | Marks |
|--------------------------------------|-------|
| Clear differentiation between terms. | 2     |
| Some differentiation between terms.  | 1     |
| Irrelevant response.                 | 0     |

Examples of suitable answers:

### Growth

- increase in size of the individual and in bodily structures OR
- increase in the size of the body as a whole and of the body parts, though not all parts grow at the same rate OR
- quantitative change, as the number and size of cells of an individual increase

### Development

- a progressive series of orderly, predictable changes in the complexity of the individual from conception until death OR
- an increase in the complexity of the body OR
- a series of changes in an individual's level of functioning and behaviour that results in an increased complexity of ability to function OR
- an orderly sequence of change that depends on growth and maturation as individuals interact with their environment

### Part (d)

| Description                                                                                        | Marks |
|----------------------------------------------------------------------------------------------------|-------|
| Explains impact on growth and development of two environmental and two biological factors.         | 7–8   |
| Briefly explains impact on growth and development of two environmental and two biological factors. | 5–6   |
| Briefly explains impact on growth and development of one environmental and one biological factor.  | 3–4   |
| Identifies four factors, little or no explanation of the effect on growth and development.         | 1–2   |
| Inappropriate response.                                                                            | 0     |

Examples of factors and effect on growth and development:

| Factors                                                                                           | Effect on growth and development                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Environmental e.g.</b><br>nutrition, exercise, culture, family, encouragement, love, education | <b>Examples:</b> <ul style="list-style-type: none"> <li>▪ Exercise provided to children in day-care influences their physical development e.g. gross motor skills.</li> <li>▪ Culture determines the level of independence, lack of independence affects social and emotional development.</li> <li>▪ A child not learning to trust others may make it difficult to develop the interpersonal skills necessary for social development.</li> <li>▪ Health of the elderly in care-nutrition and dental care.</li> <li>▪ Inadequate education for a child leads to poor intellectual development.</li> <li>▪ Violence or abuse to a child in the home, results in problems with emotional and psychological development.</li> <li>▪</li> <li>▪</li> <li>▪</li> <li>▪</li> </ul> |

|                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Biological e.g.</b><br>genes, hormones, nervous system | <b>Examples:</b> <ul style="list-style-type: none"> <li>Genetics determine physical characteristics and health status, both influence physical development.</li> <li>Hormones influencing the growth spurt have an earlier effect on the physical development of girls than of boys.</li> <li>The growth centre in the brain keeps a child on its genetically determined growth curve.</li> <li>Children with physical or mental special needs require extra care for their growth and development.</li> <li></li> <li></li> <li></li> <li></li> <li></li> </ul> |
|-----------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

**Question 2**  
**Part (a)**

| Description                                                                                                        | Marks |
|--------------------------------------------------------------------------------------------------------------------|-------|
| Identifies two principles of development and provides one relevant specific example to explain each principle.     | 4     |
| Identifies two principles of development and provides one relevant specific example to explain only one principle. | 3     |
| Identifies one principle of development and provides one example.                                                  | 2     |
| Identifies one principle of development but does not provide examples.                                             | 1     |
| Identifies no principles of development nor examples.                                                              | 0     |

Examples of suitable answers for individuals that in or requiring care:

| Principles of development                            | Specific examples                                                                                                                                                                                         |
|------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Development involves change.                         | <ul style="list-style-type: none"> <li>body size</li> <li>thinking and understanding as new things are experienced</li> <li>how the individual relates to others</li> <li></li> <li></li> <li></li> </ul> |
| The developmental pattern is orderly and sequential. | <ul style="list-style-type: none"> <li>Children sit before they walk.</li> <li>Adults undergo social development as they learn to parent.</li> <li></li> <li></li> <li></li> </ul>                        |

|                                                                   |                                                                                                                                                                                                                                                                                                                                       |
|-------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| There are critical periods of development.                        | <ul style="list-style-type: none"> <li>Establishing a strong emotional bond between a child and the primary caregiver is essential to the ability to form relationships in later life.</li> <li>When children leave home parents develop new roles.</li> <li></li> <li></li> <li></li> </ul>                                          |
| Development is influenced by inherited and environmental factors. | <ul style="list-style-type: none"> <li>Physical characteristics are inherited, nutrition and learning are examples of environmental factors.</li> <li>Predisposition to disease can be inherited, social responsibility, concern for others are examples of environmental factors.</li> <li></li> <li></li> <li></li> <li></li> </ul> |
| There are individual differences in development.                  | <ul style="list-style-type: none"> <li>Developmental milestones are reached at different ages.</li> <li>Elderly people cope differently with their decline in functioning.</li> <li></li> <li></li> <li></li> </ul>                                                                                                                   |
| All development is interrelated.                                  | <ul style="list-style-type: none"> <li>Emotional deprivation can lead to an infant not reaching their growth potential.</li> <li>Isolation and loneliness in seniors can mean that they do not bother to look after their health.</li> <li></li> <li></li> <li></li> </ul>                                                            |
| Development moves from general to specific.                       | <ul style="list-style-type: none"> <li>A child waves its arms before it grasps a toy.</li> <li>Adolescents shift from using physical characteristics to describe themselves to using psychological characteristics.</li> <li></li> <li></li> <li></li> <li></li> </ul>                                                                |

### Part (b)

| Description                                                             | Marks |
|-------------------------------------------------------------------------|-------|
| Identifies a life stage and gives two relevant developmental tasks.     | 3–4   |
| Identifies a life stage and identifies one relevant developmental task. | 1–2   |
| Inappropriate answer.                                                   | 0     |

Identifies the life stage and gives two (2) examples of relevant developmental tasks.

Examples of developmental tasks identified with specific life stages of individuals in or requiring care:

**Children:** walk; talk; learn sex differences; learn modesty; form concepts etc.

**Adolescents:** establish relationships with peers both male and female;  
learn male and female social roles; develop emotional independence;  
prepare for a career etc.

**Adults with additional needs:**

**Seniors:** social and civic responsibility; helping children become adults; coping with aging parents; accepting physiological changes that accompany aging; developing leisure activities; consolidating work performance etc.

**Part (c)**

| Description                                                                                                                                                            | Marks |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| Discusses two cultural factors that impact on the development of individuals and provides two community strategies in detail that address cultural values and beliefs. | 3–4   |
| Discusses one cultural factor that impacts on the development of individuals and provides one community strategy in detail that addresses cultural values and beliefs. | 1–2   |
| Inappropriate answer.                                                                                                                                                  | 0     |

Cultural factors

1.

2.

Community strategies

1.

2.

Examples of community strategies for those in or requiring care (within schools, at the shire or council):

- Harmony Day celebrations: multicultural week
- Language classes for children in primary schools
- Library displays of cultural celebrations
- Book readings at the library
- Cultural street festivals
- Community fetes with cultural food stalls
- Visual arts exhibitions
- Musical concerts for the elderly in respite care.
- 

### Question 3

#### Part (a)

| Description                                                                                                          | Marks |
|----------------------------------------------------------------------------------------------------------------------|-------|
| Identifies a life stage and clearly describes four indicators that show an individual has a healthy self-concept.    | 7–8   |
| Identifies a life stage and briefly describes four indicators that show an individual has a healthy self-concept.    | 4–6   |
| Identifies a life stage and describes fewer than four indicators that show an individual has a healthy self-concept. | 1–3   |
| Inappropriate answer.                                                                                                | 0     |

In the context of a selected life stage, examples of appropriate answers must include four indicators:

**Child:** competence in communicating; friendships; where they fit in the immediate and extended family and community; feeling of safety; security of knowing needs will be met; physical competence; acceptance of capabilities and limitations.

**Adolescent:** academic competence; job competence; athletic competence; physical appearance; social acceptance; close friendships; romantic appeal; conduct; resilience; positive self-esteem.

**Adult with additional needs:** job competence; physical appearance; physical competence; financial competence; social acceptance; resilience; parenting competence; relationship competence; self-reliance; confident to take charge of their lives; positive self-esteem.

**Senior in care:** acceptance of loss of the work role; develop changed relationships with children; technological competence; develop positive relationships with grandchildren and spouses of children; ability to live independently following the loss of a partner; feeling needed and that contributions to family life are valued; able to cope with decline in health; acceptance of the inevitability of the end of life; able to live on a reduced income.

**Part (b)**

| Description                                                                                            | Marks |
|--------------------------------------------------------------------------------------------------------|-------|
| Select a life stage and clearly describe two ways to promote a healthy self-concept for an individual. | 4     |
| Select a life stage and briefly describe two ways to promote a healthy self-concept for an individual. | 2–3   |
| Select a life stage and describe one way to promote a healthy self-concept for an individual.          | 1     |
| Irrelevant answer.                                                                                     | 0     |

Examples of appropriate answers of those in or requiring care:

| Life stage | Ways to promote self-concept                                                                                                                                                                                                                      |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Child      | Praise accomplishments; model positive social and emotional behaviour; encourage social interaction; provide learning opportunities; provide a safe environment; meet needs; set boundaries but avoid belittling and rejection.                   |
| Adolescent | Assist to:<br>encourage independence in decision-making and friendships;<br>acknowledge success; encourage new experiences; provide a safe, secure environment; listen; accept different opinions; model positive social and emotional behaviour. |

|                             |                                                                                                                                                                                                                                        |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Adult with additional needs | Assist to:<br>accept differences; be empathetic; provide a safe environment; encourage new experiences; acknowledge success; develop parenting and employment competence.                                                              |
| Senior                      | Assist to:<br>develop confidence in using new technologies; demonstrate tolerance; accept advice and assistance; acknowledge success in self and others; maintain friendships and activities; contribute to family and community life. |

#### Question 4

| Description                                                                                                                                                                              | Marks |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| Lists five changes, including economic, social and environmental changes, and provides relevant reasons for each change and the impact on the provision of resources in the community.   | 9–10  |
| Lists four–five changes, including economic, social and environmental changes, and gives relevant reasons for each change and the impact on the provision of resources in the community. | 7–8   |
| Lists three changes, including economic, social or environmental changes, and gives relevant reasons for change and the impact on the provision of resources in the community.           | 5–6   |
| Lists five changes, including economic, social or environmental changes and omits or gives irrelevant reasons for change and the impact on the provision of resources in the community.  | 3–4   |
| Lists fewer than five changes and omits or gives irrelevant reasons for change.                                                                                                          | 1–2   |
| Irrelevant answer.                                                                                                                                                                       | 0     |

Examples of possible answers for those in, or requiring, care:

| Category  | Change                                                   | Reason for change                                                                                                                                                                                    |
|-----------|----------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Economic: |                                                          |                                                                                                                                                                                                      |
|           | Increase in two-income families                          | high cost of living; focus on material possessions; availability of credit; educated women wanting to pursue a career; people marrying later when careers are established; child care more available |
|           | Expansion of vocational training programs for child care | to ease skills shortages; to provide employees for the economic boom; provide options for students staying longer at school due to the raised school leaving age                                     |
|           | Provision of social security benefits                    | support low income individuals and families; redistribution of wealth to support those in need; recognition that some people are unable to support themselves adequately                             |

|                |                                                        |                                                                                                                                                                                               |
|----------------|--------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                | Encouragement and changes to superannuation            | high cost—government providing pensions to an aging population; enables people to self-fund their retirement                                                                                  |
| Social:        | Increase in women in and/or returning to the workforce | smaller families; more women qualified and wanting careers; availability of childcare, working mothers and stay-at-home fathers; more men contributing to household duties                    |
|                | Aging population                                       | improved health and medical care; increased awareness of lifestyle factors that promote health                                                                                                |
|                | Children staying at home longer                        | high cost to children of living independently; age at which children complete study and begin earning an income; children's expectations of duplicating parents' lifestyle when they move out |
|                | Need for retirement villages                           | retirees selling homes to fund retirement; villages provide social interaction and leisure activities; move to smaller accommodation when children leave home                                 |
|                |                                                        |                                                                                                                                                                                               |
| Environmental: |                                                        |                                                                                                                                                                                               |
|                |                                                        |                                                                                                                                                                                               |
|                |                                                        |                                                                                                                                                                                               |
|                |                                                        |                                                                                                                                                                                               |
|                |                                                        |                                                                                                                                                                                               |

## Question 5

### Part (a)

| Description                                                                                             | Marks |
|---------------------------------------------------------------------------------------------------------|-------|
| Identifies an issue or challenge and a life stage, and discusses two human and two non-human resources. | 4     |
| Identifies an issue or challenge and a life stage, and discusses one human and one non-human resource.  | 2–3   |
| Identifies an issue or challenge and a life stage, and discusses resources.                             | 1     |
| Unsuitable answer.                                                                                      | 0     |

Examples of suitable answers for those in or requiring care:

| Issue or challenge           | Human resources                                                                                                                                                     | Non-human resources                                          |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------|
| Operating a playgroup        | physical skills; knowledge of child development, laws and regulations governing playgroups and safety procedures; patience; parent helpers; children; social skills | space, money, time, play equipment etc.                      |
| Preparing family meals       | food preparation skills; time; creativity; knowledge of safety, nutrition, equipment usage and family dietary needs                                                 | kitchen equipment, food ingredients, money, space, time etc. |
| Caring for an elderly parent | patience; empathy; knowledge of needs, dietary requirements and community support services                                                                          | carer's allowance, space, time, equipment etc.               |

### Part (b)

| Description                                                                                | Marks |
|--------------------------------------------------------------------------------------------|-------|
| Identifies a life stage and clearly explains how values and goals affect decision-making.  | 4     |
| Identifies a life stage and briefly explains how values and goals affect decision-making.  | 3     |
| Identifies a life stage and explains values and goals, does not relate to decision-making. | 2     |
| Identifies a life stage and explains values OR goals OR decision-making.                   | 1     |
| Unsatisfactory answer.                                                                     | 0     |

For full marks the answer will include the following key content:

- values are the things that are important to an individual and guide the way they live
- goals are the things they aspire to achieve
- the importance of values and goals will determine the level of planning and dependence or independence that is involved in their decision-making processes.

## Question 6

### Part (a)

| Description                                                                                                                  | Marks |
|------------------------------------------------------------------------------------------------------------------------------|-------|
| Identifies in detail an existing product, service or system; specified standards; the target group and how needs were met.   | 5–6   |
| Identifies an existing product, service or system; unsure or irrelevant answer for the target group, and how needs were met. | 3–4   |
| Identifies an existing product, service or system; and the target group, does not discuss needs met.                         | 1–2   |
| Unsatisfactory response.                                                                                                     | 0     |

Examples of suitable answers for those in or requiring care:

| Product, system or service    | Target group            | How needs are met                                                                                                                                                                               |
|-------------------------------|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Playgroups                    | Children                | Provide physical and social<br>Needs of children and social contact for parents.                                                                                                                |
| Water conservation devices    | Families and households | Water shortages mean that families and households must contribute to water conservation or face severe restrictions.                                                                            |
| Meals on Wheels               | Elderly or disabled     | Home delivered hot meals provide nutrition to those unable to prepare meals; the delivery provides social contact for isolated people.                                                          |
| Day-care facilities           | Children                | Provide physical facilities for families who need care for their children at pre-school age. Needs of children are being addressed and parents are able to work or have time off from children. |
| Family single-parent payments | Families and households | Single parent who have young children and are unable to work; have access to benefits and housing/rental assistance from the government.                                                        |

|              |                     |                                                                                                                                                                        |
|--------------|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Respite care | Elderly or disabled | Home or live-in care for children or adults with additional needs or the elderly who need extra care. Enable family member's assistance and specialist help (nursing). |
|--------------|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

**Part (b)**

| Description                                                                                                | Marks |
|------------------------------------------------------------------------------------------------------------|-------|
| Examines two possible beliefs and values of the developer and two possible beliefs and values of the user. | 4     |
| Examines one possible belief and value of the developer and one possible belief and value of the user.     | 2–3   |
| Examines two possible beliefs and values of either the developer or the user.                              | 1     |
| Unsuitable answer.                                                                                         | 0     |

Examples of suitable answers (in the context of a playgroup):

| Developer beliefs and values                                                                                                                                                                                                                              | User beliefs and values                                                                                                                                                                                                        |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Economic e.g. covering costs<br>Social e.g. ratio of staff<br>Environmental e.g. stimulating environment, light, fresh air, safe<br>Functional e.g. provides the services outlined to parents<br>Aesthetic e.g. calm, colourful, shady, durable equipment | Social e.g. meeting personal needs (cultural, dietary etc.), rights and responsibilities of users<br>Economic e.g. low cost<br>Environmental e.g. safe surroundings<br>Durability/functional e.g. sustainable use of equipment |

**Part (c)**

| Description                                                                        | Marks |
|------------------------------------------------------------------------------------|-------|
| Gives two examples to explain how the product/system has addressed societal needs. | 3–4   |
| Gives two examples to explain how the product/system has addressed societal needs. | 1–2   |
| Does not explain how the product/system has addressed societal needs.              | 0     |

Examples of answers suitable for a sample of products/systems: provide two (2) explanations:

|                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Meals on Wheels:</b><br>Enables elderly or disabled people to stay in their homes and reduces the burden on the health care system; lessens the likelihood of the health of the elderly or disabled being affected by nutrient deficiencies; volunteers delivering meals are alerted to emergencies with the isolated elderly or disabled; provides social contact; provides voluntary employment opportunities for those who want to contribute. |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

**Day-care facilities:**

Enable children to be cared for by qualified people while in part-time or full-time employment; children develop social and communication skills; provides organised play activities that develop skills that prepare children for pre-primary and school; more facilities needed in the community with growing number of single parent families and women returning to the workforce.

**Family/single parent payments;**

Enables a parent who has children to remain at home and care for them; financial contribution for everyday expenses e.g. food, rent, household expenses; children cared for by family member and not others; fewer places needed for child care.

**Question 7****Part (a)**

| Description                                                                              | Marks |

## Question 8

### Part (a)

| Description                                                     | Marks |
|-----------------------------------------------------------------|-------|
| Lists and describes four family types.                          | 4     |
| Lists and describes three family types.                         | 3     |
| Lists and describes two family types.                           | 2     |
| Lists and describes one family types or only lists family type. | 1     |
| Inappropriate answer.                                           | 0     |

Examples of answers:

- couple families with children or nuclear families: mother and father in a committed relationship living with their children
- couple-only families: male and female in a committed relationship without children
- sole parent families or single parent families: a mother or a father caring for children
- extended family: mother, father, children and relatives living in the same household
- blended family or step family: where parents form new relationships and care for children from previous relationships
- adult family: older couples where adult children no longer live in the family home
- same sex family: two people of the same sex in a committed relationship
- communal families: a group of people, not related, who live together and share tasks
- foster family: a couple that cares for a child that is not biologically their own. Foster children stay with the family for indeterminate periods
- adopted family: a couple that cares for a child that is not biologically their own. Adopted children legally become permanent members of the family.

### Part (b)

| Description                                                                                                                              | Mark |
|------------------------------------------------------------------------------------------------------------------------------------------|------|
| Provides three examples to show how the needs of this group will affect the development and management of resources and support systems. | 5–6  |
| Provides two examples to show how the needs of this group will affect the development and management of resources and support systems.   | 3–4  |
| Provides one example to show how the needs of this group will affect the development and management of resources and support systems.    | 1–2  |
| Unsatisfactory answer.                                                                                                                   | 0    |

Examples of suitable answers:

- birth rate may decline and increase the need for further resource incentives for women to have more children
- systems may need to be developed to enable after-hours shopping and access to facilities
- extended hours and services for medical and healthcare for adults
- need to develop services to support childless couples in old age as they do not have children to assist them
- increased need for entertainment facilities for adults
- as the population ages there will be fewer people of working age, systems could be developed to enable more older people to continue in part-time work without financial penalty
- increased need for assisted reproductive technology and review of associated laws
- improve access to adoption processes.

**Part (c)**

| <b>Description</b>                                                                 | <b>Mark</b> |
|------------------------------------------------------------------------------------|-------------|
| Identifies four issues that describe the effect on individuals and the community.  | 4           |
| Identifies three issues that describe the effect on individuals and the community. | 3           |
| Identifies two issues that describe the effect on individuals and the community.   | 2           |
| Identifies one issue that describes the effect on individuals and the community.   | 1           |

Answers must include (4) issues. Examples of suitable answers of those in or requiring care:

- May not be enough carers to provide services.
- Carer services may only be provided through institutions where the greatest number of people could be cared for.
- Extended and immediate family members may be forced to assist in providing care if those needing care are to be able to remain at home.
- Carer services may become too expensive for many needing care.
- Increased government subsidies may be necessary if people are to remain in care in their own homes.
- Hospitals and other institutions that provide care would not be able to cope.
- Incentives may need to be offered to attract more people into the caring profession.
- Need for more caring facilities and services.
- Many single-parent families manage very well and do not need care.

| Thoroughly describes how the government has reacted to this trend and clearly discusses how their changes and policies may enhance the quality of life for the group now and in the future.      | 11–15        |
| Briefly describes how the government has reacted to this trend and clearly discusses how their changes and policies may enhance the quality of life for the group now and in the future.         | 8–10         |
| Describes how the government has reacted to this trend and clearly discusses how their changes and policies may enhance and how it enhances quality of life for the group now and in the future. | 6–7          |
| Describes how the government has reacted to this trend and clearly discusses how their changes and policies may enhance supporting policy development.                                           | 4–5          |
| Some evidence of understanding how the government has reacted. Little to no evidence of how the changes and policies have helped.                                                                | 1–3          |
| Unsatisfactory answer                                                                                                                                                                            | 0            |

**Example of the content of a suitable answer:**

- **Identifies a contemporary local or national issue or trend** e.g. increased need for child care
- **Selects a specific group of people:** children
- **Analyses the issue and how it has affected life for the specific group:**

**Analysis**

A focus on the increase in women returning to the workforce after the birth of a child or when the child is a little older (toddler). There is an increase in the need for child care places and the growing demand for more facilities to be built and developed in suburban areas and within a building where mothers/fathers are employed.

A lack of adequate support for affordable child care has put increased pressure on the family budget for women returning to the workforce. In many instances, it is not economically viable for women to return to work due to the escalating cost of child care and the limited places that are suitable and accessible for the parent/s.

**Effect on the life of the specific group:**

- Children are being cared for by qualified people.
- Children are developing social and communication skills.
- Children have developing relationships with others.
- Children may be at child care for long hours.
- Children may be susceptible to getting sick.
- Children may not have a routine and different rules from at home and child care.

- **Identifies social, economic and environmental factors that have been addressed in relation to this trend:**

**Social factors:**

- children are provided with a wide range of stimulating and educational activities and programs
- socialisation with children from a variety of backgrounds and cultures
- services are feeling the impact of increased running costs, in particular wage increases especially in rural and remote areas where families are already feeling the pinch.
- child care becoming more meaningful for children if they enjoy going.
- 

**Economic factors:**

- more children in child care means less pressure on social security systems
- students frequently can try out and commit to careers while at school
- parents can return to work and earn money if they can get their child/ren into child care
- must be economically viable for parent to return to workforce in relation to the cost of child care
- child care rebate from the government assists families
- demand for more child care facilities to be built
- businesses or organisations offering child care within the building.

**Environmental factors:**

- children who are meaningfully occupied are less likely to get into trouble
- families that are not knowledgeable about child care options and education can get support from child health clinics, GP, counsellors, friends
- publicity and advocacy for funding of children's services from government
- rules and regulations followed by child care in regard to pollution and the use and storage of chemicals, air and water standards
- recycling program of materials used by children and staff at the centre.

- **Describes how governments have reacted to this trend and discusses how their changes enhance the quality of life for the specific group now and in the future:**
  - Childcare Affordability Program (\$1.5 billion) to help parents return to the workforce, participation and production.

- An increase from 30% to 50% tax rebate, covering up to \$7500 out-of-pocket expense per child.
- Pay the 50% tax rebate quarterly so parents do not have to wait a year or two to receive their money.
- Incentives for the quality, affordability and access to child care and the significant workforce incentives to underpin the children's services and sectors for long-term sustainability.
- A 20 per cent increase, to \$45.5 million, in base funding to Budget Based Funded (BBF) child care services will further strengthen Australia's child care sector and better support families and their children who rely on these services.
- Building and development of 360 services nationally from 2008.
- Providing support for flexible services predominately in rural, remote and Indigenous communities that do not, or are not eligible to, participate in the Child Care Benefit (CCB) system.
- In 2007, many child care facilities services received a one-off equipment grant up to \$20,000 in 2007 which could be used towards furniture, toys, equipment, bikes, toys, books, games, white goods, cots, change tables, outdoor play equipment, minor repairs and maintenance.
- Development of appropriate educational programs—makes adolescents more employable and motivates them to become lifelong learners.
- Funding programs for professional training for child care workers.
- Labour government to fund 4-year trained Early Childhood educators within long day-care services, due to the need.
- Skills shortage programs (Skills Focus) by State and Federal Governments.

**Part a)**

| Description                                                                                                                                                                                                | Mark |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| Selects and clearly explains a task or an experience. Identifies an age group and clearly describes the environment. Thoroughly explains the responsibilities you had to care for the individual or group. | 9–10 |
| Selects and briefly explains a task or an experience. Identifies an age group and briefly describes the environment. Explains the responsibilities you had to care for the individual or group.            | 7–8  |
| Selects a task or an experience. Identifies an age group and describes the environment. Lists the responsibilities you had to care for the individual or group.                                            | 5–6  |
| Does not select a task or an experience. Identifies an age group and the environment. Lists the responsibilities you had to care for the individual or group.                                              | 3–4  |
| Mainly unsuitable answer                                                                                                                                                                                   | 1–2  |

**Part (b)**

| <b>Description</b>                                                                                                                                                                                                                                                                                               | <b>Mark</b> |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| Uses information from developmental theorists, and your personal experiences, to accurately and thoroughly explain interrelationships between biological, socio and environmental factors. Gives a minimum of two (2) examples of development related to appropriate theories to demonstrate interrelationships. | 13–15       |
| Uses information from developmental theorists, and your personal experiences, accurately to briefly explain interrelationships between biological, socio and environmental factors. Gives one (1) only example of development related to appropriate theories to demonstrate interrelationships.                 | 10–12       |
| Uses information from one (1) only developmental theorist, and your personal experiences, in attempting to explain interrelationships between biological, socio and environmental factors. Gives one (1) only example of development related to appropriate theories to demonstrate interrelationships.          | 6–9         |
| Uses information from one (1) only developmental theory, but does not clearly explain interrelationships between biological, socio and environmental factors. Does not include examples of development related to appropriate theories to demonstrate interrelationships.                                        | 3–5         |
| Mainly unsuitable answer                                                                                                                                                                                                                                                                                         | 1–2         |

Examples of suitable content to include when explaining interrelationships between biological, social and environmental factors that affect growth and development through the use of theoretical frameworks.

- **Piaget:** cognitive development theory (biological theory)
  - linking stages of brain development with appropriate learning experiences
  - this interaction enables children to develop more complex ways of thinking
  - children are actively involved in constructing their understanding of the world based on their own experiences.

**Examples:**

  - children interact with others through play (physical development) learn
  - appropriate behaviours such as sharing and taking turns (social development)
  - adolescents find it difficult to effectively live independently as they do not understand independent living processes (intellectual development) and may neglect their health (physical development)
- **Erickson:** psychosocial theory of development (social theory)
  - human beings go through systematic stages of development at similar ages
  - there are eight psychosocial conflicts during life, each relates to a stage of life
  - people move through the stages through biological maturation and social demands.

**Examples:**

  - child: trust versus mistrust (social development)
  - adolescent: identity versus role confusion (emotional)
  - adult: intimacy versus isolation (emotional)
  - senior: integrity versus despair (emotional).
- **Vygotsky:** sociocultural theory of development (environmental theory)
  - cognitive development is a social process whereby children

- interact with knowledgeable members of the cultural group
- this social approach does not pay attention to biological influences or that there may be differences in development of people within the same culture
- social process of dialogue and coaching enables children to develop their minds by learning how skilled people in their society think and solve problems
- learning is through collaboration rather than the imitation of role models.

**Examples:**

- children learn by copying their parents behaviours (intellectual and social development)
- children learn language (intellectual development) by hearing their parents and recognising responses (emotional development).
- **Bronfenbrenner:** bio-ecological theory of development (environmental theory)
  - emphasises the influence of both genetics and environment (nature/nurture) on development
  - the individual exists within a series of environmental systems
  - the individual interacts with the systems and the systems interact with each other
  - the relationships between a person and their environment are dynamic and changing
  - human development is a complex process
  - this theory focuses on the development of a unique individual in a unique environment thus cannot identify general paths of development that can be applied to most people.

**Examples**

- interactions between the four environmental systems (micro, meso, exo and macro) influence growth and development
- a child who is talented in sport may come from a sporting family and also attend an elite sporting program at school
- globalisation is changing local workplaces and vocational choices
- terrorism is changing lifestyles and social and cultural attitudes.

**Part (c)**

| Description                                                                                                                                                                                                                                   | Mark  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| Thoroughly explains how the student's knowledge and interaction with an individual may have made a difference to his or her development. Provide specific examples.                                                                           | 13–15 |
| Briefly explains how the student's knowledge and interaction with an individual may have made a difference to his or her development. Provide specific examples.                                                                              | 9–12  |
| Does not clearly explain how the student's knowledge and interaction with an individual may have made a difference to his or her development. Provides some examples.                                                                         | 5–8   |
| Does not show knowledge or explain the interaction with an individual that may have made a difference to his or her development. Provides examples, but not relevant to explaining how the student has affected the individual's development. | 1–4   |

**SECTION TWO—SHORT ANSWER**  
**CONTEXT: LIVING INDEPENDENTLY**

**Question 1**

**Part (a)**

| Description                                       | Marks |
|---------------------------------------------------|-------|
| Clearly defines all four areas of development     | 4     |
| Two–three areas clearly defined                   | 2–3   |
| Brief definition of all four areas of development | 1     |

Examples of suitable definitions:

Suitable definitions will have information related to the following:

**Physical**

- increase in complexity of body systems OR
- increased and specialised functioning of tissues in the body OR
- closely related to growth, involves motor development, coordination and/or manipulative skills

**Intellectual**

- development of brain and intellect OR
- increase in ability to think and reason occurs as a result of interaction with the environment

**Social**

- learning of skills and attitudes that enable individuals to live easily with others in their community OR
- a process by which knowledge behaviours and the transfer of ideas are learnt through interactions with others

**Emotional**

- progressive change in ability to control moods and feelings OR
- learning of appropriate responses to happenings around us, basis of interactions and bonds with others

**Part (b)**

| Description                                                                                                                                                                                                                                 | Marks |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| Clearly explains the relationship between nature and nurture and links to genetic and environmental influences. Provides at least 2 reasons for a debate about the theory. Gives examples of nature and nurture that influence development. | 5–6   |
| Brief explanation of relationship between nature and nurture does not link to genetic and environmental influences. Provides one reason for the debate. Gives examples of influences of nature and nurture on development.                  | 3–4   |
| Unclear, incomplete explanation of relationship between nature and nurture does not link to genetic and environmental influences. Does not provide a reason for the debate. Does not give examples.                                         | 1–2   |

Suitable answers will include information related to the following statements:

- Nature refers to the genetic influences on growth and development e.g. genes, hormones.
- Nurture refers to the environmental influences on growth and development e.g. culture, nutrition.
- Nature and nurture both contribute to human variation.
- Nature and nurture influence human development from the time of conception.
- Influence of nature cannot be changed; influence of nurture can be changed to affect development.

Examples for those living independently:

- Parents who are musically or artistically talented and bring up children in an artistic environment are likely to see their children develop similar talents.
- Fraternal twins that are reared under the same conditions would be alike, regardless of differences in their genes. But, studies have shown they do more closely resemble each other than do non-twin brothers and sisters, they also show these same striking similarities when reared apart—as in similar studies done with identical twins.

•

•

Reasons for a debate about the nature nurture theory:

- Some scientists think that people behave as they do according to genetic predispositions or even "animal instincts." This is known as the –nature theory of human behaviour. Other scientists believe that people think and behave in certain ways because they are taught to do so. This is known as the -nurture theory of human behaviour.
- We do not yet know how much of what we are is determined by our DNA and how much by our life experience.
- The search for behavioural genes is the source of constant debate. Many fear that genetic arguments might be used to excuse criminal behaviour or justify separation and divorce.
- The most debated issue pertaining to the nature theory is the existence of a homosexual gene pointing to a genetic component to sexual orientation.

•

•

•

**Part (c)**

| Description                         | Marks |
|-------------------------------------|-------|
| Clear differentiation between terms | 2     |
| Some differentiation between terms  | 1     |
| Irrelevant response                 | 0     |

Examples of suitable answers:

**Growth**

- increase in size of the individual and in bodily structures OR
- increase in the size of the body as a whole and of the body parts, though not all parts grow at the same rate OR
- quantitative change, as the number and size of cells of an individual increase

**Development**

- a progressive series of orderly, predictable changes in the complexity of the individual from conception until death OR
- an increase in the complexity of the body OR
- a series of changes in an individual's level of functioning and behaviour that results in an increased complexity of ability to function OR
- an orderly sequence of change that depends on growth and maturation as individuals interact with their environment

**Part (d)**

| Description                                                                                        | Marks |
|----------------------------------------------------------------------------------------------------|-------|
| Explains impact on growth and development of two environmental and two biological factors.         | 7–8   |
| Briefly explains impact on growth and development of two environmental and two biological factors. | 5–6   |
| Briefly explains impact on growth and development of one environmental and one biological factor.  | 3–4   |
| Identifies four factors, no explanation of effect on growth and development.                       | 1–2   |
| Inappropriate response.                                                                            | 0     |

Examples of factors and effect on growth and development of those living independently:

| Factors                                                                                            | Effect on growth and development                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Environmental e.g.</b><br>nutrition, exercise, culture, family, encouragement, love, education. | <b>Examples:</b> <ul style="list-style-type: none"> <li>▪ exercise provided to adolescents at school and this influences their physical development e.g. gross motor skills</li> <li>▪ culture determines the level of independence; lack of independence affects social and emotional development</li> <li>▪ an adolescent not learning to trust others may make it difficult to develop the interpersonal skills necessary for social development</li> <li>▪ health of an individual living independently—nutrition and dental care</li> <li>▪ inadequate education for a child or teenager leads to poor intellectual development</li> <li>▪ violence or abuse to a teenager in the home results in problems with emotional and psychological development</li> <li>▪ adolescent's diet may effect their behaviour in the classroom and at home.</li> <li>▪</li> </ul> |

|                                                            |                                                                                                                                                                                                                                                                                                                    |
|------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Biological e.g.</b><br>genes, hormones, nervous system. | <b>Examples:</b> <ul style="list-style-type: none"> <li>genetics determine physical characteristics and health status; both influence physical development</li> <li>hormones influencing the growth spurt have an earlier effect on the physical development of girls than of boys.</li> <li></li> <li></li> </ul> |
|------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Question 2

### Part (a)

| Description                                                           | Marks |
|-----------------------------------------------------------------------|-------|
| Identifies a life stage and gives two relevant developmental tasks.   | 3–4   |
| Identifies life stage and identifies one relevant developmental task. | 1–2   |
| Inappropriate answer.                                                 | 0     |

Identifies the life stage and gives two (2) examples of relevant developmental tasks.

Examples of suitable answers:

| Principles of development                                         | Specific examples                                                                                                                                                                                                                                                                                     |
|-------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Development involves change.                                      | <ul style="list-style-type: none"> <li>in body size—puberty</li> <li>in thinking and understanding as new things are experienced</li> <li>in how the individual relates to others</li> <li></li> </ul>                                                                                                |
| The developmental pattern is orderly and sequential.              | <ul style="list-style-type: none"> <li>adults undergo social development as they learn to parent</li> <li></li> </ul>                                                                                                                                                                                 |
| There are critical periods of development.                        | <ul style="list-style-type: none"> <li>when children leave home parents develop new roles and become independent</li> <li></li> </ul>                                                                                                                                                                 |
| Development is influenced by inherited and environmental factors. | <ul style="list-style-type: none"> <li>physical characteristics are inherited; nutrition and learning are examples of environmental factors</li> <li>predisposition to disease can be inherited; social responsibility, concern for others are examples of environmental factors</li> <li></li> </ul> |
| There are individual differences in development.                  | <ul style="list-style-type: none"> <li>developmental milestones are reached at different ages—puberty</li> <li>elderly people cope differently with their decline in functioning</li> <li></li> </ul>                                                                                                 |
| All development is interrelated.                                  | <ul style="list-style-type: none"> <li>isolation and loneliness in seniors can mean that they do not bother to look after their health</li> <li></li> </ul>                                                                                                                                           |
| Development moves from general to specific.                       | <ul style="list-style-type: none"> <li>adolescents shift from using physical characteristics to describe themselves to using psychological characteristics—I am honest rather than, I have blue eyes</li> <li></li> </ul>                                                                             |

**Part (b)**

Examples of developmental tasks identified with a specific life stage:

| Description                                                           | Marks |
|-----------------------------------------------------------------------|-------|
| Identifies a life stage and gives two relevant developmental tasks.   | 3–4   |
| Identifies life stage and identifies one relevant developmental task. | 1–2   |
| Inappropriate answer.                                                 | 0     |

**Those living independently**

**Adolescents:** establish relationships with peers both male and female; learn male and female social roles; develop emotional independence; prepare for a career; develop independent decision-making skills.

**Adults:** financial independence; develop friendship relationships; prepare for a possible relationship with a partner; developing civic responsibility.

**Seniors:** social and civic responsibility; helping children become adults; coping with aging parents; accepting physiological changes that accompany aging; developing leisure activities; consolidating work performance.

**Part (c)**

| Description                                                                                                                                                            | Marks |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| Discusses two cultural factors that impact on the development of individuals and provides two community strategies in detail that address cultural values and beliefs. | 3–4   |
| Discusses one cultural factor that impacts on the development of individuals and provides one community strategy in detail that addresses cultural values and beliefs. | 1–2   |
| Inappropriate answer.                                                                                                                                                  | 0     |

Cultural factors

1.

2.

Community strategies

1.

2.

### Question 3

#### Part (a)

| Description                                                                                                          | Marks |
|----------------------------------------------------------------------------------------------------------------------|-------|
| Identifies a life stage and clearly describes four indicators that show an individual has a healthy self-concept.    | 7–8   |
| Identifies a life stage and briefly describes four indicators that show an individual has a healthy self-concept.    | 4–6   |
| Identifies a life stage and describes fewer than four indicators that show an individual has a healthy self-concept. | 1–3   |
| Inappropriate answer.                                                                                                | 0     |

In the context of a selected life stage, examples of appropriate answers must include four indicators:

#### **Those living independently**

**Adolescents:** academic competence; job competence; athletic competence; physical appearance; social acceptance; close friendships; romantic appeal; conduct; resilience; positive self-esteem

**Adults:** job competence; physical appearance; physical competence; financial competence; social acceptance; resilience; parenting competence; relationship competence; self-reliance; confidence to take charge of their lives; positive self-esteem

**Seniors:** acceptance of loss of the work role; develop changed relationships with children; technological competence; develop positive relationships with grandchildren and spouses of children; ability to live independently following the loss of a partner; feeling needed and that contributions to family life are valued; able to cope with decline in health; acceptance of the inevitable the end of life; able to live on a reduced income etc.

**Part (b)**

| Description                                                                                                                               | Marks |
|-------------------------------------------------------------------------------------------------------------------------------------------|-------|
| Clearly describes two ways to promote self-concept and relates to an appropriate life stage. Provides specific examples for reasons.      | 4     |
| Incompletely describes two ways to promote self-concept and relates to an appropriate life stage. Provides specific examples for reasons. | 2–3   |
| Describes one way to promote self-concept and relates to an appropriate life stage. Does not provide specific examples for reasons.       | 1     |
| Irrelevant answer.                                                                                                                        | 0     |

Examples of appropriate answers for those who live independently:

| Life stage | Ways to promote self-concept                                                                                                                                                                                                    |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Adolescent | encourage independence in decision-making and friendships; acknowledge success; encourage new experiences; provide a safe, secure environment; listen; accept different opinions; model positive social and emotional behaviour |
| Adult      | accept difference; be empathetic; provide a safe environment; encourage new experiences; acknowledge success; develop parenting and employment competence                                                                       |

|        |                                                                                                                                                                                                                 |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Senior | confidence in using new technologies; demonstrate tolerance; accept advice and assistance; acknowledge success in self and others; maintain friendships and activities; contribute to family and community life |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

#### Question 4

| Description                                                                                                                                                                              | Marks |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| Lists five changes, including economic, social and environmental changes, and provides relevant reasons for each change and the impact on the provision of resources in the community.   | 9–10  |
| Lists four–five changes, including economic, social and environmental changes, and gives relevant reasons for each change and the impact on the provision of resources in the community. | 7–8   |
| Lists three changes, including economic, social or environmental changes, and gives relevant reasons for change and the impact on the provision of resources in the community.           | 5–6   |
| Lists five changes, including economic, social or environmental changes and omits or gives irrelevant reasons for change and the impact on the provision of resources in the community.  | 3–4   |
| Lists fewer than five changes and omits or gives irrelevant reasons for change.                                                                                                          | 1–2   |
| Irrelevant answer.                                                                                                                                                                       | 0     |

Examples of possible answers for those living independently:

| Category  | Change                                      | Reason for change                                                                                                                                                                                    |
|-----------|---------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Economic: | More adolescents in part-time work          | adolescents developing independence and want financial independence; parents cannot afford to provide disposable income                                                                              |
|           | Increase in two-income families             | high cost of living; focus on material possessions; availability of credit; educated women wanting to pursue a career; people marrying later when careers are established; child care more available |
|           |                                             |                                                                                                                                                                                                      |
|           | provision for social security benefits      |                                                                                                                                                                                                      |
|           | encouragement and changes to superannuation | high cost to government of providing pensions to an aging population; enables people to self-fund their retirement                                                                                   |
| Social:   | increase in women in the workforce          | smaller families; more women qualified and wanting careers; availability of child care, working mothers and stay at home fathers; more men contributing to household duties                          |

|                |  |  |
|----------------|--|--|
|                |  |  |
|                |  |  |
| Environmental: |  |  |
|                |  |  |
|                |  |  |
|                |  |  |
|                |  |  |

### Question 5

#### Part (a)

| Description                                                                                                                  | Marks |
|------------------------------------------------------------------------------------------------------------------------------|-------|
| Identifies in detail an existing product, service or system; specified standards; the target group and how needs were met.   | 5–6   |
| Identifies an existing product, service or system; unsure or irrelevant answer for the target group, and how needs were met. | 3–4   |
| Identifies an existing product, service or system; and the target group, does not discuss needs met.                         | 1–2   |
| Unsatisfactory response.                                                                                                     | 0     |

Examples of suitable answers for those living independently:

| Issue or challenge               | Human resources                                                                                                                 | Non-human resources                                             |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------|
| Maintaining a healthy lifestyle  | physical skills; motivation; general good health; knowledge of exercise types                                                   | space, money, time, exercise equipment; safe walking paths; gym |
| Preparing meals for self         | food preparation skills; time; creativity; knowledge of safety, nutrition, equipment usage and family dietary needs etc.        | kitchen equipment, food ingredients, money, space, time         |
| Aged person living independently | patience; knowledge of needs, community support services; interests and hobbies; supportive family and friends; resilience etc. | income; accommodation; transport; shopping facilities           |

#### Part (b)

| Description                                                                                | Marks |
|--------------------------------------------------------------------------------------------|-------|
| Identifies a life stage and clearly explains how values and goals affect decision-making.  | 4     |
| Identifies a life stage and briefly explains how values and goals affect decision-making.  | 3     |
| Identifies a life stage and explains values and goals, does not relate to decision-making. | 2     |
| Identifies a life stage and explains values OR goals OR decision-making.                   | 1     |
| Unsatisfactory answer.                                                                     | 0     |

For full marks the answer will include the following key content:

- values are the things that are important to an individual and guide the way they live
- goals are the things they aspire to achieve
- the importance of values and goals will determine the level of planning and dependence or independence that is involved their decision-making processes.

#### Question 6

##### Part (a)

| Description                                                                                                                  | Marks |
|------------------------------------------------------------------------------------------------------------------------------|-------|
| Identifies in detail an existing product, service or system; specified standards; the target group and how needs were met.   | 5–6   |
| Identifies an existing product, service or system; unsure or irrelevant answer for the target group, and how needs were met. | 3–4   |

|                                                                                                      |     |
|------------------------------------------------------------------------------------------------------|-----|
| Identifies an existing product, service or system; and the target group, does not discuss needs met. | 1–2 |
| Unsatisfactory response.                                                                             | 0   |

Examples of suitable answers for those who live independently:

| Product          | Target group                     | How needs are met                                |
|------------------|----------------------------------|--------------------------------------------------|
| Skateboard parks | Adolescents                      | provide physical and social needs of adolescents |
|                  | Adults, single person households |                                                  |
|                  | Aged                             |                                                  |

#### Part (b)

| Description                                                                                                                                                                        | Marks |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| Fully explains how two (2) values and beliefs of the developer and two (2) possible values of the user underpinned the development of the identified product, service or system.   | 4     |
| Briefly explains how two (2) values and beliefs of the developer and two (2) possible values of the user underpinned the development of the identified product, service or system. | 3     |
| Explains values and beliefs, but does not relate to the developer and one (1) possible value of the user underpinned the development of the identified product, service or system. | 2     |
| Does not clearly explain the values and beliefs of the developer and two (2) possible values of the user underpinned the development of the identified product, service or system. | 1     |
| Unsatisfactory answer                                                                                                                                                              | 0     |

For full marks the answer will include the following key content:

- values are the things that are important to an individual and guide the way they live
- goals are the things they aspire to achieve
- the importance of values and goals will determine the level of planning and dependence or independence that is involved their decision-making processes.

#### Part (c)

| Description                                                                        | Marks |
|------------------------------------------------------------------------------------|-------|
| Gives two examples to explain how the product/system has addressed societal needs. | 3–4   |
| Gives two examples to explain how the product/system has addressed societal needs. | 1–2   |
| Does not explain how the product/system has addressed societal needs.              | 0     |

Examples of answers suitable for a sample of products/systems: provide two (2) explanations:

**Skateboard parks:**

Enable adolescents to meet with others of their age and to develop social and communication skills; provides sporting activities that enhance a healthy lifestyle; lessen a feeling of isolation in independent youth; provides low-cost entertainment for adolescents; group activities assist in reducing adolescent crime rates.

**Question 7**  
**Part (a)**

| Description                                                                              | Marks |
|------------------------------------------------------------------------------------------|-------|
| Selects and clearly explains one law in WA which aims to prevent inequity and injustice. | 3–4   |
| Selects and briefly explains one law in WA which aims to prevent inequity and injustice. | 1–2   |
| Unsatisfactory answer.                                                                   | 0     |

Examples of suitable answers:

- free from discrimination against any individual
- each individual is fully included
- everyone is treated equally.
- 

**Part (b)**

| Description                                                                                           | Mark |
|-------------------------------------------------------------------------------------------------------|------|
| Identifies and explains three laws and explains the benefits to individuals, families or communities. | 5–6  |
| Identifies and explains two laws and explains the benefits to individuals, families or communities.   | 3–4  |
| Identifies and explains one law and explains the benefits to individuals, families or communities.    | 1–2  |
| Unsatisfactory answer.                                                                                | 0    |

|  | Laws or regulations for those living independently                                                                                                           | Benefits                                                                             |

**Question 8**  
**Part (a)**

| Description                 | Marks |
|-----------------------------|-------|
| Lists four family types.    | 4     |
| Lists three family types.   | 3     |
| Lists two family types.     | 2     |
| Gives one family type only. | 1     |
| Gives inappropriate answer. | 0     |

Examples of answers:

- couple family with children or nuclear families: mother and father in a committed relationship living with their children
- couple-only family: male and female in a committed relationship without children
- sole parent family or single parent family: a mother or a father caring for children
- extended family: mother, father, children and relatives living in the same household
- blended family or step family: where parents form new relationships and care for children from previous relationships
- adult family: older couples where adult children no longer live in the family home
- same sex family: two people of the same sex in a committed relationship
- communal family: a group of people, not related, who live together and share tasks
- foster family: a couple that cares for a child that is not biologically their own. Foster children stay with the family for indeterminate periods
- adopted family: a couple that cares for a child that is not biologically their own. Adopted children legally become permanent members of the family.

**Part (b)**

| Description                                                                                                                              | Mark |
|------------------------------------------------------------------------------------------------------------------------------------------|------|
| Provides three examples to show how the needs of this group will affect the development and management of resources and support systems. | 5–6  |
| Provides two examples to show how the needs of this group will affect the development and management of resources and support systems.   | 3–4  |
| Provides one example to show how the needs of this group will affect the development and management of resources and support systems.    | 1–2  |
| Unsatisfactory answer.                                                                                                                   | 0    |

Examples of suitable answers:

- women remaining in the workforce longer
- women partnering later (in their late 30s)
- women are being educated more today and seeking a successful and secure future for themselves
- improvements in assisted reproductive technology enables women to wait longer to have children
- couples choosing not to have children
- need for financial resources to survive the cost of living as the population ages there will be fewer people of working age, systems could be developed to enable more older people to continue in part-time work without financial penalty
- variety and access to methods of contraception
- improved access to adoption processes.
- 
- 
- 
- 

**Part (c)**

| Description                                          | Mark |
|------------------------------------------------------|------|
| Identifies four reasons for the suspected increase.  | 4    |
| Identifies three reasons for the suspected increase. | 3    |
| Identifies two reasons for the suspected increase.   | 2    |
| Identifies one reason for the suspected increase.    | 1    |

Examples of suitable answers:

Answers must include (4) issues.

- increased need for resources to establish an increased number of households
- increased need for energy and water resources to maintain an increased number of households

- increased pollution and waste from more households
- need for a range of types of smaller housing to conserve housing resources
- increased cost in provision of services to an increased number of households
- need for amendments to laws to enable higher density housing
- increased need for community activities to lessen loneliness and isolation
- crime rate could increase due to the vulnerability of people living alone.

**SECTION THREE—EXTENDED ANSWER  
LIVING INDEPENDENTLY**

**Question 11  
Part (a)**

| <b>Description</b>                                                                                                 | <b>Marks</b> |
|--------------------------------------------------------------------------------------------------------------------|--------------|
| Identifies a task, names and clearly explains three (3) processes used to complete the task.                       | 9–10         |
| Identifies a task, names and briefly explains three (3) processes used to complete the task.                       | 7–8          |
| Identifies a task, names and explains two (2) processes used to complete the task.                                 | 5–6          |
| Identifies a task, brief explanation of one (1) process used and the application of some steps in the process.     | 3–4          |
| Identifies a task, partially explains the process used, or describes the application of some steps in the process. | 1–2          |
| Irrelevant answer.                                                                                                 | 0            |

**Part (b)**

| <b>Description</b>                                                                                                                                           | <b>Marks</b> |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| Clearly explains how the different points of view of others in society were managed when completing the task. Provides at least three (3) specific examples. | 13–15        |
| Briefly explains how the different points of view of others in society were managed when completing the task. Provides at least three (3) specific examples. | 10–12        |
| Explains how the different points of view of others in society were managed when completing the task. Provides at least two (2) specific examples.           | 7–9          |
| Explains how the different points of view of others in society were managed when completing the task. Provides one (1) specific example.                     | 4–6          |
| Does not explain well how the different points of view of others in society were managed when completing the task. Does not provide relevant examples.       | 1–3          |
| Irrelevant answer.                                                                                                                                           | 0            |

**Part (c)**

| <b>Description</b>                                                                                                                                        | <b>Marks</b> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| Clearly analyses the effectiveness of the actions taken in advocating for the needs of the specific group. Provides at least three (3) specific examples. | 13–15        |
| Briefly analyses the effectiveness of the actions taken in advocating for the needs of the specific group. Provides at least three (3) specific examples. | 10–12        |
| Briefly analyses the effectiveness of the actions taken in advocating for the needs of the specific group. Provides at least two (2) specific examples.   | 7–9          |
| Briefly analyses the effectiveness of the actions taken in advocating for the needs of the specific group. Provides one (1) specific example.             | 4–6          |
| Does not analyse the effectiveness of the actions taken in advocating for the needs of the specific group. Does not provide relevant examples.            | 1–3          |
| Irrelevant answer.                                                                                                                                        | 0            |

Example of the content of a suitable answer:

- **Identifies a task** e.g. adolescents as consumers of processed foods.
- **Explains processes used to complete the task and describe how they were applied.**

Technology process:

- investigating—needs, values, issues, opportunities related to adolescent nutrition
- devising—on the basis of food preferences and nutrition considerations
- producing—producing healthy food
- evaluating—considers whether the product meets adolescent needs.

Social inquiry processes are embedded in the technology process:

- discussion and initial reaction to practices and beliefs about adolescent food choices
- exploration of practices and beliefs about adolescent food choices
- consideration of issues of ethics and justice regarding food availability
- consideration of alternative value positions
- adoption and defence of a value position
- action planning to produce healthy foods.

- **Describe how you managed the different perspectives of others in society towards your specific group.**

Empowerment processes are embedded in the technology process:

- collect information
- analyse information
- evaluate information
- work collaboratively to set goals
- work collaboratively to identify barriers and enablers to achieving goals
- plan collaboratively to achieve goals
- take action
- reflect on what has been learnt.

Social inquiry processes fit here too.

- **Analyse the effectiveness of your actions in advocating for the needs of your specific group.**

Using a process of reflection:

- were the goals achieved?
- what are the reasons for achievement or non-achievement of goals?
- how thoroughly was the exploration or research process carried out?
- how effective was the action planning or collaborative planning?
- were there barriers to success that were not considered?
- was effective use made of supportive strategies when taking action?

## Question 12

### Part (a)

| Description                                                                                                                                                                                                                                                                                                                                   | Mark |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| Selects a relevant task or experience/s where there was interaction with an individual of a specific life stage living independently. Explains in detail the age of the individual, location of where he/she lives; discusses the experiences shared, the positive and negative feelings, individual and peer group participation and effort. | 9–10 |
| Selects a task or experience/s where interaction with an individual of a specific life stage living independently. Briefly explains the age of the individual, location of where he/she lives; discusses the experiences shared, the positive and negative feelings, individual and peer group participation and effort.                      | 7–8  |
| Selects a task or experience/s where interaction with an individual of a specific life stage living independently. Lists the age of the individual, location of where he/she lives; discusses the experiences shared, the positive and negative feelings, individual and peer group participation and effort.                                 | 5–6  |
| Does not select a relevant task or experience/s where interaction with an individual of a specific life stage living independently. Lists the age of the individual location of where he/she lives; discusses the experiences shared, the positive and negative feelings, individual and peer group participation and effort.                 | 3–4  |
| Mainly unsuitable answer.                                                                                                                                                                                                                                                                                                                     | 1–2  |

### Part (b)

| Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Mark  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| Includes a statement to the effect that for optimum development, factors of development cannot be considered in isolation, therefore developmental theories cannot be considered in isolation. Uses information from developmental theorists to accurately and thoroughly explain interrelationships between biological, socio-economic and environmental factors. Gives a minimum of two (2) examples of development related to appropriate theories to demonstrate interrelationships. | 13–15 |
| Includes a statement to the effect that for optimum development, factors of development cannot be considered in isolation, therefore developmental theories cannot be considered in isolation. Uses information from developmental theorists accurately to briefly explain interrelationships between biological, socio-economic and environmental factors. Gives one (1) only example of development related to appropriate theories to demonstrate interrelationships.                 | 10–12 |
| Uses information from one (1) only developmental theorist in attempting to explain interrelationships between biological, socio-economic and environmental factors. Gives one (1) only example of development related to appropriate theories to demonstrate interrelationships.                                                                                                                                                                                                         | 7–9   |
| Uses information from one (1) only developmental theory, but does not clearly explain interrelationships between biological, socio-economic and environmental factors. Does not include examples of development related to appropriate theories to demonstrate interrelationships.                                                                                                                                                                                                       | 4–6   |
| Mainly unsuitable answer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 1–3   |

Examples of suitable content to include when explaining interrelationships between biological, social and environmental factors that affect growth and development through the use of theoretical frameworks.

- **Piaget:** cognitive development theory (biological theory)
  - linking stages of brain development with appropriate learning experiences
  - this interaction enables children and young teenagers to develop more complex ways of thinking
  - children and young teenagers are actively involved in constructing their understanding of the world based on their own experiences.

**Examples:**

  - children interact with others through play (physical development) learn
  - appropriate behaviours such as sharing, taking turns (social development)
  - adolescents find it difficult to effectively live independently as they do not understand independent living processes (intellectual development) and may neglect their health (physical development).
- **Erickson:** psychosocial theory of development (social theory)
  - human beings go through systematic stages of development at similar ages
  - there are eight psychosocial conflicts during life, each relates to a stage of life
  - people move through the stages through biological maturation and social demands.

**Examples:**

*adolescent*—identity versus role confusion (emotional).  
This is a critical stage in forming an identity for an individual. Adolescents are trying to work out who they are and where they fit into society. Experimentation process occurs with trying new things, different looks, ideas and friendships.

*adult*—intimacy versus isolation (emotional).  
This is the age when a person forms an intimate relationship with a person. If a person has still not discovered their identity, it may be difficult to form an intimate relationship with another person, therefore feeling a sense of loneliness and isolation.

*senior*—integrity versus despair (emotional).  
If older people look back over their life and view it as being meaningful they will find it easier to face getting old and death. If they cannot do this they may have regrets or bitterness and thus have difficulty in preparing for death and feel despair.
- **Vygotsky:** sociocultural theory of development (environmental theory).
  - cognitive development is a social process whereby children interact with knowledgeable members of the cultural group
  - this social approach does not pay attention to biological influences or that there may be differences in development of people within the same culture
  - social process of dialogue and coaching enables teenagers to develop their minds by learning how skilled people in their society think and solve problems
  - learning is through collaboration rather than the imitation of role models.

**Examples:**

- teenagers learn by copying their parents' behaviours (intellectual and social development)
- children learn language (intellectual development) by hearing their parents and recognising responses (emotional development).

- **Bronfenbrenner:** bio-ecological theory of development (environmental theory)
  - emphasises the influence of both genetics and environment (nature/nurture) on development
  - the individual exists within a series of environmental systems
  - the individual interacts with the systems and the systems interact with each other
  - the relationships between a person and their environment are dynamic and changing
  - human development is a complex process
  - this theory focuses on the development of a unique individual in a unique environment thus cannot identify general paths of development that can be applied to most people.

**Examples**

- interactions between the four environmental systems (micro, meso, exo and macro) influence growth and development
- a teenager who is talented in sport may come from a sporting family and also attend an elite sporting program at school
- an elderly person living independently at home may have immediate and extended family visit, interaction and socialisation with peers at Rotary and bowling clubs, medical appointments with qualified staff, water exercise classes at the local gym and be an active member of the local shire and involvement in the recycling program and an active supporter of Greenpeace
- globalisation is changing local workplaces and vocational choices
- terrorism is changing lifestyles and social and cultural attitudes.

**Part (c)**

| Description                                                                                                                                                                                                                                   | Mark  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| Thoroughly explains how the student's knowledge and interaction with an individual may have made a difference to his or her development. Provides specific examples.                                                                          | 13–15 |
| Briefly explains how the student's knowledge and interaction with an individual may have made a difference to his or her development. Provides specific examples.                                                                             | 9–12  |
| Does not clearly explain how the student's knowledge and interaction with an individual may have made a difference to his or her development. Provides some examples.                                                                         | 5–8   |
| Does not show knowledge or explain the interaction with an individual that may have made a difference to his or her development. Provides examples, but not relevant to explaining how the student has affected the individual's development. | 1–4   |

## Mapping content for Stage 2 exam
