

Western Australian Certificate of Education
Examination, 2009
Question/answer booklet

**OUTDOOR
EDUCATION**

**Written paper
Stage 3**

Please place your student identification label in this box

Student Number: In figures

--	--	--	--	--	--	--	--

In words

Time allowed for this paper

Reading time before commencing work: ten minutes

Working time for paper: three hours

Materials required/recommended for this paper

To be provided by the supervisor

Multiple-Choice Answer Sheet

This Question/Answer Booklet

To be provided by the candidate

Standard items: pens, pencils, eraser, correction fluid, ruler, highlighters

Special items: compass

Important note to candidates

No other items may be taken into the examination room. It is **your** responsibility to ensure that you do not have any unauthorised notes or other items of a non-personal nature in the examination room. If you have any unauthorised material with you, hand it to the supervisor **before** reading any further.

Structure of this paper

Section	Number of questions available	Number of questions to be attempted	Suggested working time (minutes)	Marks available	Percentage of exam
Section One: Multiple-Choice	20	20	30	20	20
Section Two: Short Answer	7	7	90	90	50
Section Three: Extended Answer	3	2	60	40	30
Total				150	100

Instructions to candidates

1. The rules for the conduct of Western Australian external examinations are detailed in the *Year 12 Information Handbook 2009*. Sitting this examination implies that you agree to abide by these rules.
2. For Section One you are provided with a multiple-choice answer sheet. Use a blue or black pen or a B or 2B pencil for all entries on this sheet. For each question, shade the box which indicates your answer.
3. For Sections Two and Three, write your answers in the spaces provided in this Question/Answer booklet. A blue or black pen should be used. Wherever appropriate, fully labelled diagrams, tables and examples should be used to illustrate and support your answers.
4. You must be careful to confine your responses to the specific questions asked and to follow any instructions that are specific to a particular question.
5. Spare answer pages are provided at the end of this booklet. If you need to use them, indicate in the original answer space where the answer is continued, i.e. give the page number.

Section One: Multiple-Choice

20 Marks

A multiple-choice answer sheet is provided for you to answer questions in this section. Use a blue or black pen or a B or 2B pencil for all entries. For each question, shade the box that indicates your answer.

This section has **twenty (20)** questions. Attempt **all** questions.

Suggested working time: 30 minutes

1. When selecting a knot for securing equipment, the **most** important consideration is that the knot be
 - (a) easily recognisable.
 - (b) easily undone.
 - (c) constructed quickly.
 - (d) appropriate for the specific purpose.

2. When using a GPS to determine position, which of the following environmental conditions would provide the **most** accurate result?
 - (a) a narrow river gorge
 - (b) a deep valley
 - (c) a dense forest canopy
 - (d) a thick scrub bushland

3. The Department of Education and Training specifically provide procedures and guidelines to assist teachers in
 - (a) obtaining qualifications to teach in the outdoors.
 - (b) meeting their duty of care responsibilities to students.
 - (c) publishing school-specific standards and operating procedures.
 - (d) developing specific expedition tools for reflective practice.

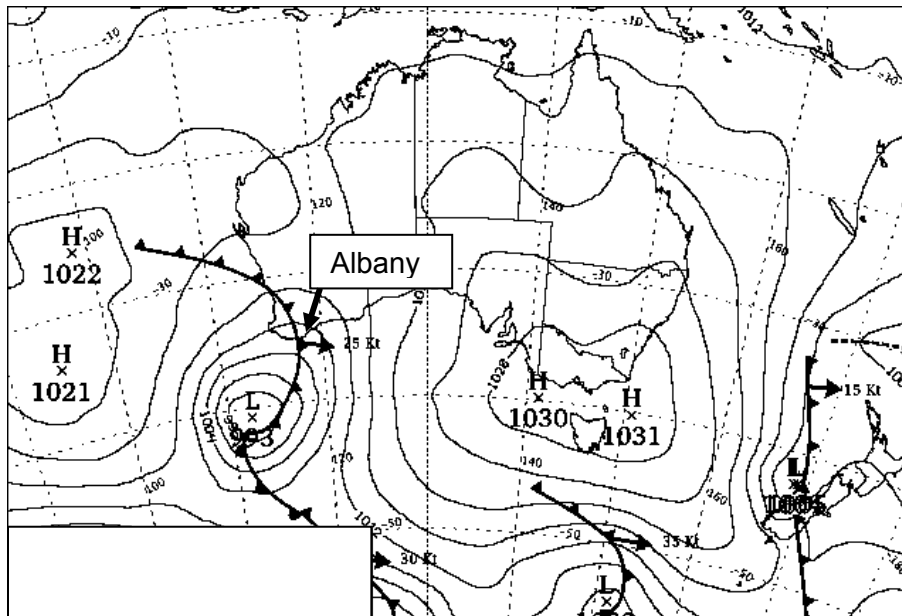

4. An outdoor program with a specific recreation focus would aim to develop which specific outcome for an individual?
 - (a) environmental understanding
 - (b) use of leisure time for skill development
 - (c) use of leisure time for enjoyment
 - (d) improvement in physical appearance

5. The requirements of effective management of expedition equipment are
 - (a) storage, care, maintenance and records of use.
 - (b) appropriate care and storage.
 - (c) storage, care and regular maintenance.
 - (d) regular cleaning, storage and records of use.

6. Which answer **best** describes the requirements of extended patient care in an expedition setting?
- (a) consideration of changing environmental conditions
 - (b) organisation of an evacuation and the maintenance of records
 - (c) monitoring of vital signs, the environment and the maintenance of detailed records
 - (d) consideration of immediate threats to life
7. Which strategy would **best** assist a novice participant in the development of generic camping skills?
- (a) highlighting appropriate resources
 - (b) effectively demonstrating techniques
 - (c) providing immediate detailed feedback
 - (d) providing encouragement
8. Why must a facilitator of an experiential learning activity possess the personal skills of active listening and patience?
- (a) So the facilitator has control and responsibility of the experience.
 - (b) To ensure the participant feels intrinsically motivated to learn.
 - (c) More can be learned through persevering with a problem than by being provided with the solution.
 - (d) Learners can practise the ability of insight that will help them in many areas of their lives.
9. Which strategy would **least** assist in the facilitation of group performance?
- (a) direct specific leader instruction
 - (b) structure allowing for reflection
 - (c) direction allowing for experimentation
 - (d) support given at the appropriate level
10. If conflict is dealt with correctly, what positive consequence could occur?
Group members:
- (a) have an increased dependency on the facilitator.
 - (b) communicate better and trust each other.
 - (c) feel comfortable to speak up without feeling devalued.
 - (d) develop the same goals and direction.
11. Which leadership theory expresses the view that people are motivated by reward and punishment?
- (a) Transactional theory
 - (b) Transformational theory
 - (c) Situational theory
 - (d) Contingency theory

12. Which of the following is an essential outcome in a peer review of leadership skills?
- (a) The leader always learns a new skill.
 - (b) The leader and peer agree on all aspects of the review.
 - (c) A positive relationship and trusting friendship is developed between the leader and the peer.
 - (d) The leader takes responsibility for the mistakes and reflects upon how to improve.
13. Which of the following characteristics of a good debriefing would **not** be observed during an evaluation?
- (a) supportive and relaxed atmosphere
 - (b) the facilitator is part of the group
 - (c) positive introduction, use eye contact and individual names
 - (d) establishment of rules, such as no put-downs

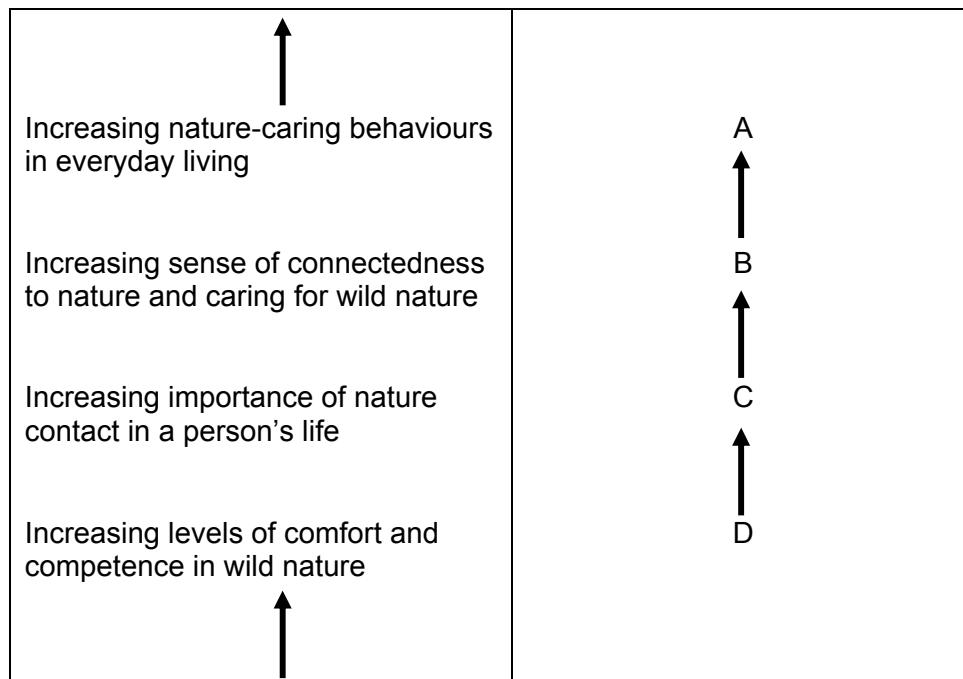

Question 14 refers to the synoptic chart below.

14. Which answer best describes the 24-hour weather forecast for Albany?
- (a) temperatures ranging from 10–17°C, moderate showers, north-westerly winds shifting to become westerly at 20–25km/hr, gusty at times
 - (b) temperatures ranging from 15–25°C, heavy rain, strong southerly winds to 30km/hr
 - (c) temperatures ranging from 10–20°C, light showers, easterly winds decreasing in strength
 - (d) temperatures ranging from 10–15°C, early showers clearing rapidly, winds from the south-west decreasing to 10km/hr

15. The 2006 report on *Australia's State of the Environment* made a number of suggestions related to the future management of the environment. Which of the following recommendations **most** accurately reflects these suggestions?
- (a) Management of the land must be undertaken at the local level if there is to be any hope of conservation success.
 - (b) Finding ways for the environment to adapt to modern development is critical to ensuring future water and food resources are secured.
 - (c) Responsibility for the environment must be shared by Indigenous people as well as those in both rural and urban settings.
 - (d) We have an adequate knowledge of the environment and just need to work out how to better use existing resources.
16. Which of the following statements about future climate change is **true**?
- (a) The current concentration of carbon dioxide in the atmosphere is the greatest it has been in the past 650,000 years.
 - (b) The concentration of greenhouse gases in the atmosphere varies naturally and temperature increases over the past 30 years can be explained by natural causes.
 - (c) Recent droughts and bushfires in Australia are a direct result of global warming and exemplify why action must be taken to stop global warming immediately.
 - (d) Future climate change will be characterised across the world by increased temperatures and less rainfall.
17. Which of the following best describes the components of the natural environment you are most likely to record in a logbook while on expedition?
- (a) geological formations, topographical features, lakes and streams
 - (b) fauna (sightings, scats, tracks, calls), flora (plant names, structure, sketches), weather (temperature, rainfall, cloud types, winds)
 - (c) flora (scientific plant names, structure of vegetation, sketches), Indigenous uses of plants
 - (d) geological formations, weather (temperature, rainfall, cloud types, winds), ecological linkages
18. When conducting an expedition in any chosen natural environment the 'Leave No Trace' principles suggest that it is **most** appropriate to
- (a) use a small campfire for debriefing.
 - (b) set tents on open grassy vegetation.
 - (c) dispose of dishwashing water only into a natural water source.
 - (d) use fuel stoves for cooking.
19. Recreation within areas managed by Dhimurru Aboriginal Corporation in Arnhem Land is
- (a) allowed only in designated recreation areas and under permit.
 - (b) not allowed for non-residents of Arnhem Land.
 - (c) allowed in all areas for visitors holding relevant permits.
 - (d) not allowed outside of the main settlement and town sites.

20. Understanding how human-nature relationships develop is critical to achieving ecological sustainability. The figure below describes how human-nature relationships develop over time. Which of the following sequences correctly characterises this relationship development summarised by A, B, C and D on the right?

- (a) A = caring for nature; B = travelling through nature; C = integrated with nature; D = alienated from nature
- (b) A = integrated with nature; B = connected with nature; C = part of nature; D = disjointed from nature
- (c) A = integrated with nature; B = caring for nature; C = travelling through nature; D = alienated from nature
- (d) A = spiritual separation from nature; B = integration with nature; C = travelling through nature; D = caring for nature

End of Section One

See next page

Section Two: Short Answer

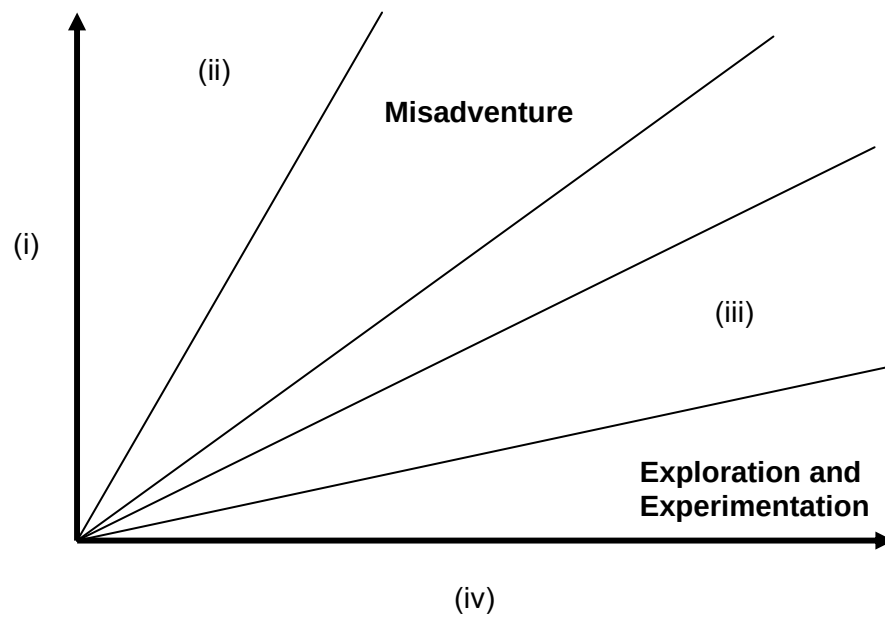

90 Marks

This section has **seven (7)** questions. Attempt **all** questions. Answer in the space provided.

Suggested working time: 90 minutes

Question 1**(14 marks)**

(a) Below is a diagram of the Adventure Experience Paradigm.

Provide the missing labels.

(4 marks)

(i) _____

(ii) _____

(iii) _____

(iv) _____

- (b) Define the Adventure Experience Paradigm and explain the relationship that exists between Variables (i) and (iv). (6 marks)

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

- (c) Describe 'Peak Adventure'. (4 marks)

[illegible]

This page has been left blank intentionally

See next page

Question 2

(16 marks)

Your group has become lost while participating in a bushwalking expedition. Use the topographical map (page 12) and the information below to perform a triangulation to locate your current position.

You notice three distinct features that you are able to locate on your map. Using your compass you take bearings to each of these features.

Feature 1 – GR 251545 (bearing 352°)

Feature 2 – GR 259535 (bearing 88°)

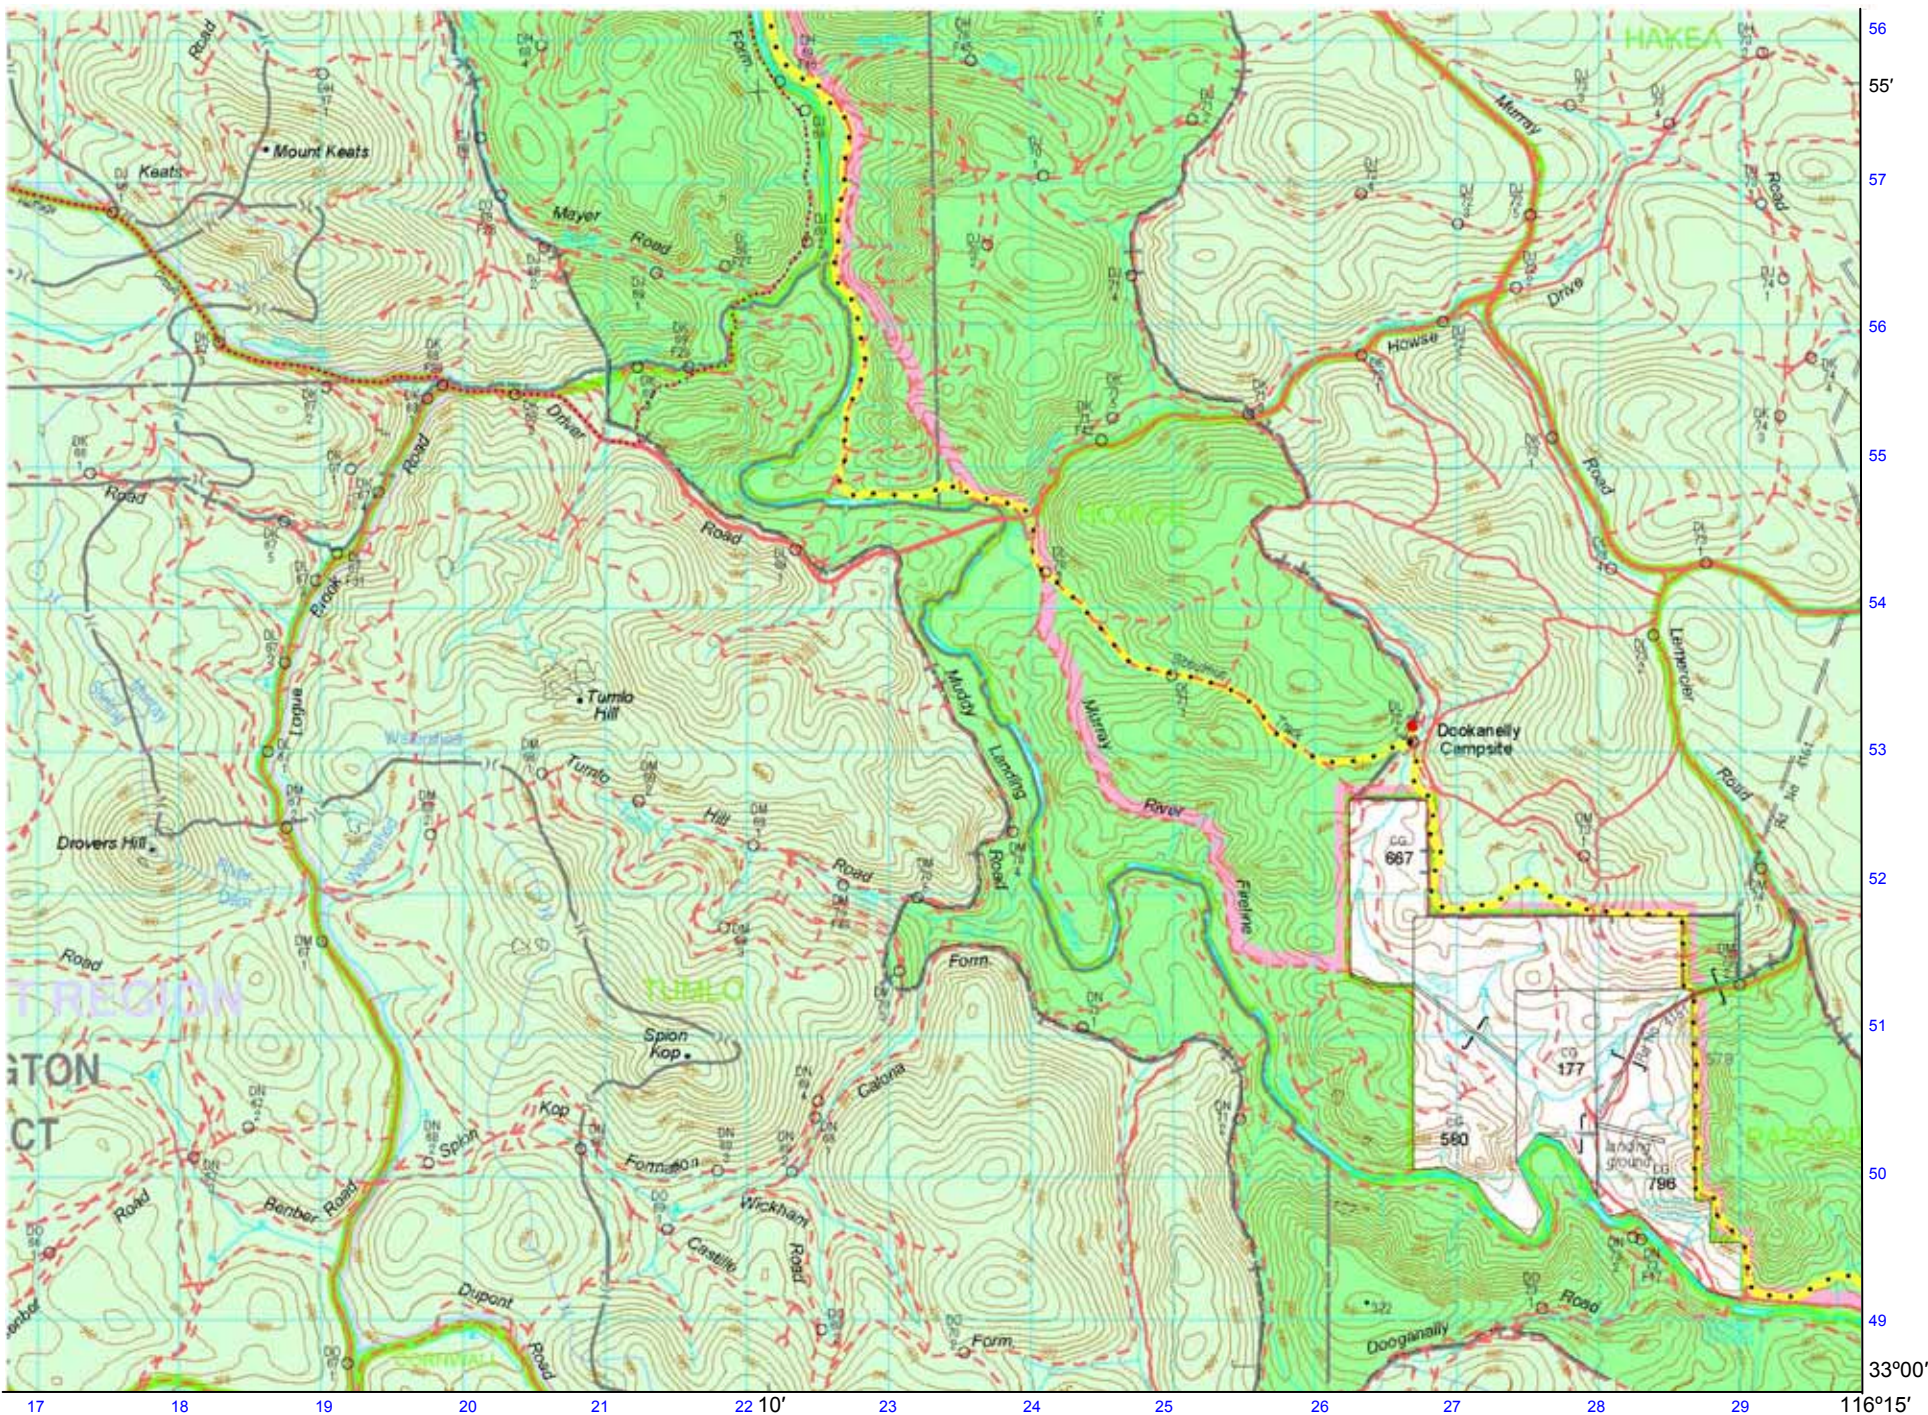

Feature 3 – GR 254531 (bearing 163°)

- (a) Use the North Points diagram on the map (page 13) to calculate the magnetic variation. Clearly show your workings below and round your calculation to the nearest whole degree to complete the triangulation. (2 marks)

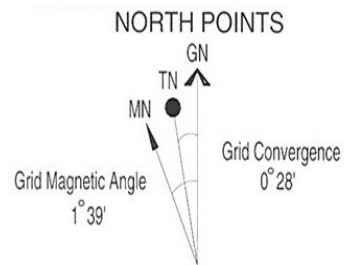

- (b) Convert the **three (3)** bearings to back bearings and grid bearings. Show your workings below. (6 marks)

- (c) Use the map (page 12) to perform the triangulation. Accurately locate the **three (3)** features and clearly draw the **three (3)** lines required for the triangulation on the map. (6 marks)

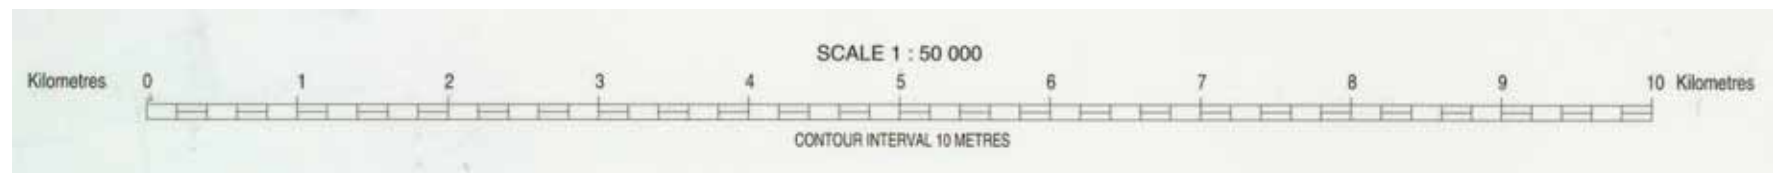

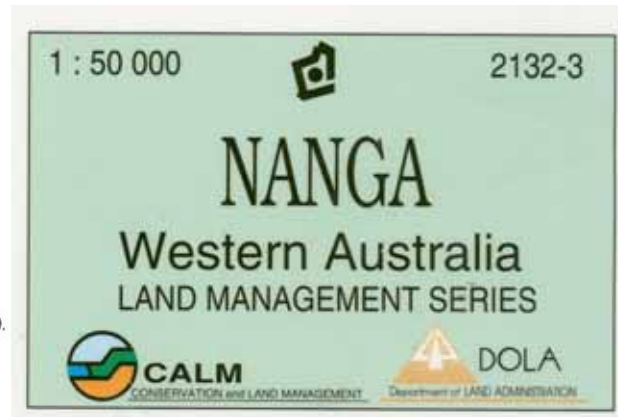

- (d) Identify your location with a **six (6)** digit grid reference. (2 marks)

See next page

True North, Grid North and Magnetic North are shown diagrammatically for the centre of this map.
Magnetic North is correct for 2004 and moves westerly by 6' 07" annually.
A Grid Bearing is obtained by subtracting the Grid Magnetic Angle from the Magnetic Bearing.

13

Question 3

(14 marks)

As a leader of an expedition you must consider the safety of your group. Risk assessment should consider causal factors including people, equipment and the environment.

Select an outdoor pursuit and complete the table below, describing **seven (7)** examples in each section of consideration of **people**. It is recommended that you select a pursuit that you were involved in this year.

Name of outdoor pursuit		
	Causal Factors	Risk Reduction Strategies
People		

Question 4

(8 marks)

Below is an example of a debriefing session related to a bushwalking experience. Read this extract to answer the following questions.

'Could everyone please come and sit on the logs around the camp fire. Thank you for participating so energetically in the bushwalk today. Your effort and enthusiasm was outstanding.

'As we begin to debrief I would like to outline a rule I expect you to follow.

'Respect yourself and know that your opinion is valuable. Respect others by actively listening to them and respect me by keeping on task.

'The major emphasis of the bushwalk was to develop skills, an awareness and appreciation of the natural environment. Take time to reflect on your feelings about the experience.

'What were the bushwalking minimal impact practices I asked you to abide by?

'While you were walking I asked you to look at the surrounding bushland to select an object that mirrored the most important thing you have learnt during this expedition. Remember, you were not to remove the object from the natural environment.

'I would like you to go off in pairs. Draw your object and share your thoughts with your partner about why you selected it. Reflect upon what you have achieved so far while on the expedition. Explain how the object reflects your thoughts and feelings about the expedition. Have you have learnt anything new? What have you discovered about the natural environment? What learning experiences can you take back to school and everyday life? Will these experiences change your behaviour towards others and the environment?

'I will give you 10 minutes to do this...

'Could everyone please come back to the campfire? I would like you to now share with the group one learning experience that your partner gained while on the expedition.'

(a) What atmosphere did the leader create, and how?

(2 marks)

- (b) Describe the approach the leader used to encourage group members to voice their thoughts and feelings about the events. (2 marks)

- (c) Describe the 'So What' phase and the strategies the leader used to help facilitate this phase. (2 marks)

- (d) Describe the 'Now What' phase and identify the method used by the leader. (2 marks)

Question 5

(14 marks)

Environmental movements have historically played a role in changing human-nature relationships and in changing the outcomes when the natural environment has been threatened with destruction.

- (a) Compare and contrast the methods used by Greenpeace and the Wilderness Society in raising public awareness of the importance of environmental concerns. (6 marks)

- (b) Choose **one (1)** campaign run by either Greenpeace or the Wilderness Society that you have studied. Provide an overview of the campaign, summarise the environmental concern, describe the approach taken by the environmental organisation and analyse the outcome of (or progress made by) the campaign. (8 marks)

(12 marks)

-
-
-
-

-
- This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

- (c) Upon reflection describe how the environmental interpretation activity enhanced your understanding of the natural environment. (4 marks)

(12 marks)

- [illegible]

- [illegible]

- (c) Describe how Indigenous land management practices in Australia have changed since European settlement. Give reasons for the changes. (4 marks)

End of Section Two

See next page

Section Three: Extended Answer

40 Marks

This section has three (3) questions. Attempt **two (2)** of the three questions.

Suggested working time: 60 minutes

Question 1 – Outdoor Experiences

(20 marks)

A logbook/journal is an essential component of any expedition. Use an expedition that you participated in this year to describe the essential content of a logbook/journal and highlight how it was used during the expedition to facilitate learning.

[illegible]

See next page

[illegible]

Question 2 – Self and Others

(20 marks)

Compare and contrast the experiential learning models of Kolb and Joplin. Use specific examples from your outdoor expedition this year in your answer to demonstrate your understanding of these two models.

[illegible]

See next page

[illegible]

Question 3 – Environmental Awareness

(20 marks)

- (a) Drawing on your experience of an outdoor expedition this year, describe **three (3)** types of weather information you obtained in the planning stage of the expedition. Why was this information important? (10 marks)

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

See next page

- (b) While on expedition, what observations of weather did you make? Describe why and how often these observations were made. Give **two (2)** examples of how the weather observations contributed to the decisions made and overall progress of the group. (10 marks)
