

Review of two-way tables and tree diagrams

What to do

1 A coin is tossed three times. Use a tree diagram to determine:

- a P(exactly 1 head)
- b P(at least 1 head)
- c P(HTH)

2 **MC** The probability of the outcome AD in this tree diagram is:

- A $\frac{2}{7}$
- B $\frac{1}{12}$
- C $\frac{1}{7}$
- D $\frac{7}{12}$

E None of the above

3 Using the tree diagram in question 2:

- a list all possible outcomes
- b calculate the probability of each possible outcome.

4 A die and a coin are tossed.

- a Display the possible outcomes in a two-way table.
- b Determine the probability of getting a 1 and a head.
- c Determine the probability of getting a number greater than 3 and no head.

5 Two dice are tossed and the outcomes recorded.

- a Display the possible outcomes on a two-way table.
- b Determine the probability that the sum of the two dice is odd.
- c Determine the probability of obtaining two prime numbers.

6 A coin is biased so that $P(H) = 0.3$. This coin is tossed two times.

- a Display the possible outcomes on a tree diagram, showing the probabilities involved.
- b Determine the probability of obtaining two heads as the outcome.
