

Statistical Thinking Process Planning Sheet

Clarify the problem and pose question/s that can be answered with data <i>This is my intro</i>	<i>The problem being posed is about whether or not there is a need for another pedestrian crossing to be installed near Balahis secondary college. The findings will be collected & possibly used to convince the council.</i>																		
Design and implement a plan to collect or obtain appropriate data <i>The school hours noted by main roads in Western Australia is 7:30-9am & 2:30-4pm</i> <i>Need to source this</i> <i>Body of report</i>	Design Population = BC students, primary school students, people utilising footpaths i.e morning exerciser. Population too hard to do a census ∴ a sample to be created. In this situation a random sampling method should be chosen, as all pedestrians & cars have equal right to use road/crossing.	Implementation - 2 weeks (not including weekends), every day during 7:30-9am & 2:30-4pm. - Differentiate road users (vehicles vs pedestrians) - 2 people at a time to survey & form an average of this data/day - Tally																	
Analyse information/data by using graphical or numerical techniques <i>Body of report</i>	<table><tr><th colspan="2">Wk 1</th><th colspan="2">Wk 2</th></tr><tr><th>Mon AM</th><th>Tue AM</th><th>Mon PM</th><th>Tue PM</th></tr><tr><td>V</td><td>P</td><td>V</td><td>P</td></tr><tr><td>V</td><td>P</td><td>V</td><td>P</td></tr></table> <i>Do this for all 5 weekdays.</i>			Wk 1		Wk 2		Mon AM	Tue AM	Mon PM	Tue PM	V	P	V	P	V	P	V	P
Wk 1		Wk 2																	
Mon AM	Tue AM	Mon PM	Tue PM																
V	P	V	P																
V	P	V	P																
Interpret the results and relate the interpretation to the original question	<i>N/A do not conducting survey.</i>																		
Communicate findings in a systematic and concise manner.	<i>See - over</i> <i>Don't forget to reference.</i>																		

Answer/Findings/ Solution:

The problem being posed by students at Badalvi's Secondary College (BSC) is whether or not there is a requirement for another pedestrian crossing outside the college. The findings will be collected & possibly used to convince the local council.

A few points were researched & considered while designing a plan to collect data to answer the question. Things to note are:

- the school hours noted by main Roads W.A are 7:30am-9am & 2:30pm-4pm
- the population that is being targeted in this survey include BSC students, their family members, students from surrounding primary school & other people using area e.g morning exercisers.

In this situation the population is to hard to survey so a sample will be collected. The most appropriate sampling method to use will be a random sampling method. All pedestrians & vehicles have equal right to use this road. Taking observations without limiting the road users is the best approach.

The following are points to note with how the survey will be implemented:

- Time frame will be 2 weeks (excluding weekends) during the school zone hours (7:30am-9am &

2:30pm-4pm)

- Road users will be differentiated & this made clear on the survey form (vehicles vs pedestrians)
- 2 people rostered on to complete the data collection each day & each session. They will position themselves at opposite ends of the road.

The survey form with ~~the~~ ~~attached~~ is attached in Appendix 1.
