

Revision

7. a)

b) \$60

8. a) \$65

b) 10 kg

c) If they checked in the 2 pieces of luggage, they will be charged $\$40 + \$65 = \$105$.
If they rearrange their luggage and distribute the weight, moving 23 kg from the 32 kg bag to the 25 kg bag, they will only be charged \$80.

9. a) $W = 25(t)$ when $t = 5$
 $= 25(5)$
 $= 125$

There are 125 L of water in the tank

b) i) 30 L/h
 ii) 10 hours

c)

10 a) $a = 0.75$
 $b = 150$

b)

c) $\$0.50 / \text{km}$

d) $k = 150$
 $d = \$162.50$

The point of intersection $(150, 162.5)$ is the point where the charges change. At this point both equations will have the same value, therefore the graph is continuous.
