

Using Classpad II to plot piecewise defined function

Use your Classpad to plot the following piecewise defined function:

$$y = \begin{cases} -2 & x < -4 \\ 2x + 6 & -4 \leq x < 4 \\ 14 & x \geq 4 \end{cases}$$

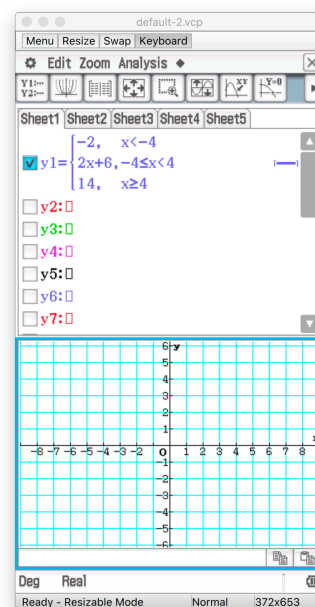

Step 1

Start by entering the piecewise template in y1 using the Math3 keyboard (tap it twice).

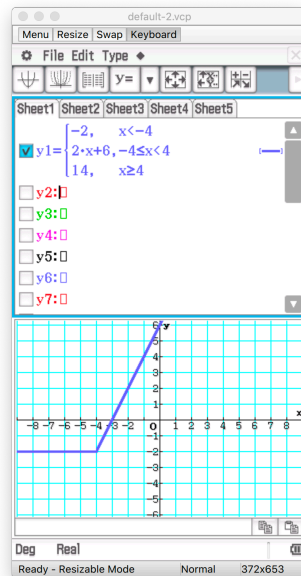

Step 2

Enter the functions, their domains and tap EXE.

Step 3

Tap .

Step 4

You can resize the graph to show the entire graph (you can use the zoom function as well).
