

Revision

1. What number gives the same answer when you add 16 to it as when you multiply it by five?
2. I think of a number, double it, add five, multiply the results by 4, take away the number I first thought of and end up with 62. What is the number?
3. Solve the following equations:
 - a. $3r + 7 = 2r - 1$
 - b. $\frac{3}{4}a + 3 = 6$
 - c. $6(y - 2) = 2(y + 3)$

Univariate Data

CENSUS 2016

- <http://www.abc.net.au/news/2017-06-27/census-australia-as-100-people/8634318>

DATA

- PRIMARY
 - Data we collect ourselves, e.g. by experiment, survey etc.
- SECONDARY
 - Data collected by other people, e.g. census (Australian Bureau of Statistics [ABS]).

What is your favourite sport?

How old are you?

- From a survey of 400 students, the data collected:

Age	AFL	Rugby	Tennis	Cycling
16	15	18	23	18
17	16	18	14	27
18	25	22	34	13
19	23	17	16	15
20	25	23	18	20

Variables

Considering **ONE** variable only - **UNIVARIATE**

Categorical

- What is the mode of transport for you to get to school?
- What is your favourite singer?
- Which suburb do you live in?

- What do you think is your fitness level – unfit, fit, very fit?
- How do you rate the TV series – one star to five stars?

- No order
- Based on the name only
- Need a sub-group (names) to complete the description e.g. favourite colour is blue, green etc.

- Labels do suggest an order
- Need a ranking to order the description, such as achievement levels: very high, high, satisfactory and so on.

Numerical

- How many students are there in year 11?
- How many people travel on the train to work?
- How many dogs do I count when I go to the park?

- The mass of a newly born baby in the month on June?
- What is the half hourly temperature for the average day in June?

Examples

- Classify each of the following data:
 1. The number of students going on the ski trip.
 2. The types of vehicles using a certain road.
 3. The various pizza sizes available at a local takeaway.
 4. The room temperature at various times during the day.
