Discuss the following:

- What other methods can you use to compare apples, oranges and grapes?
- Will the other methods give you the same answers?
- If you consider buying something else like orange juices or apple juices, what are the unit measurements you can use to compare the prices?
- Can you think of any other examples?

How about buying different size of similar goods?

Consider the three different size jars of *Blend Smooth Coffee* shown below.

\$22.40

\$12.65

\$7.20

Which of these three gives the best value for money?

IMPORTANT
UNIT

$$\frac{\$7.20}{75} = \$0.096/g$$

$$\frac{\$22.40}{250} = \$0.0896/g$$

$$\frac{\$12.65}{145} = \$0.087/g$$

The 145 g Jar is the best value for money at \$0.09/g
