

16. The step-function graph shows the distance fares charged by Optimus Bus Services for the first 30 km of travel. 1

- (a) Write down the fare for a distance of 18 km. $\$1.84$ or 184c

First Bus Services offers the following distance fares:

\$1.00 for the first 5 km and 6 cents for each subsequent kilometre.

- (b) Insert the graph corresponding to the rates of the distance fare charged by First Bus Service.
- (c) Using your graph, for a distance of 25 km,
- determine which bus service charges a lower distance fare, *Optimus Bus*
 - find the difference in the distance fares between the two bus services. $\$2.20 - \$2.12 = \$0.08$

(Graph involving Rates)

The step-function graph below shows the parking charges for the first 5 hours at Carpark A.

Carpark B has the following charges:

Free for the first 12 minutes
2.5 cents per minute thereafter.

- (i) In the graph given above, draw a graph representing the parking charges of Carpark B.
- (ii) Given that Mr Lee needs to park at either Carpark A or B from 1145 to 1445, determine which carpark offers lower parking charges. *Duration = 3 hours.*

Car park A = \$4.20

Car park B = \$4.20

The parking fees are the same for both car park.
