RELIABILITY/ VALIDITY WORKSHEET

Choose between measures of reliability (inter-rater, test-retest, inter-method, internal consistency) and validity (construct, content, criterion).

1. Mr. Smithifus is known for giving fair exams that include only test items for which the students should have been prepared. Mr. Smithifus' exams can be said to have high _____ validity.

2. Alphie wanted to go into juggling so he could be closer to his beloved circus animals (especially pigs!) There are many well-known tests to determine whether he would be a good juggler. Seven of the eight tests that Alphie took suggest that he would be a good professional juggler. The eighth test suggests that he could not juggle to save his life. This last test lacks _____ reliability. The other seven tests demonstrate a high degree of _____ validity.

3. Warren G Harding took a test in grammar school to see whether he should become an astronaut or President of the United States. He scored very poorly on both, and when he grew up, after serving as a state senator, the Lieutenant Governor of Ohio, and a US Senator, he was elected as the 29th President of the United States. Most historians count Harding among the absolute worst of American Presidents because of the Washington scandals that his poor leadership enabled. Apparently that grammar school career test had high _____ validity.

4. Justin Bieber's "career" has come to an abrupt halt. With his secret dream to build dams, he would now like to go to college in order to become a civil engineer. Justin took the ACT and did quite well, but decided to take it again to see if he could improve his scores enough for admission to Harvard. The test was a slightly different version, and this time poor Bieber did quite poorly. Bieber texted to all of his friends, "That fool ACT is seriously lacking in _____ reliability, yo."

5. David Beckham has admitted that he has Obsessive-Compulsive Disorder, and Mr. Castro has agreed to treat him for the disease. After messily re-arranging all of Beckham's carefully ordered clothes and household items, Mr. Castro administers a 500-question assessment that he created. The even-numbered questions measure Beckham's obsessions, and the odd-numbered questions measure his compulsions. Mr. Castros' OCD Assessment uses _____ reliability.
