6. pelvis
8. ureter

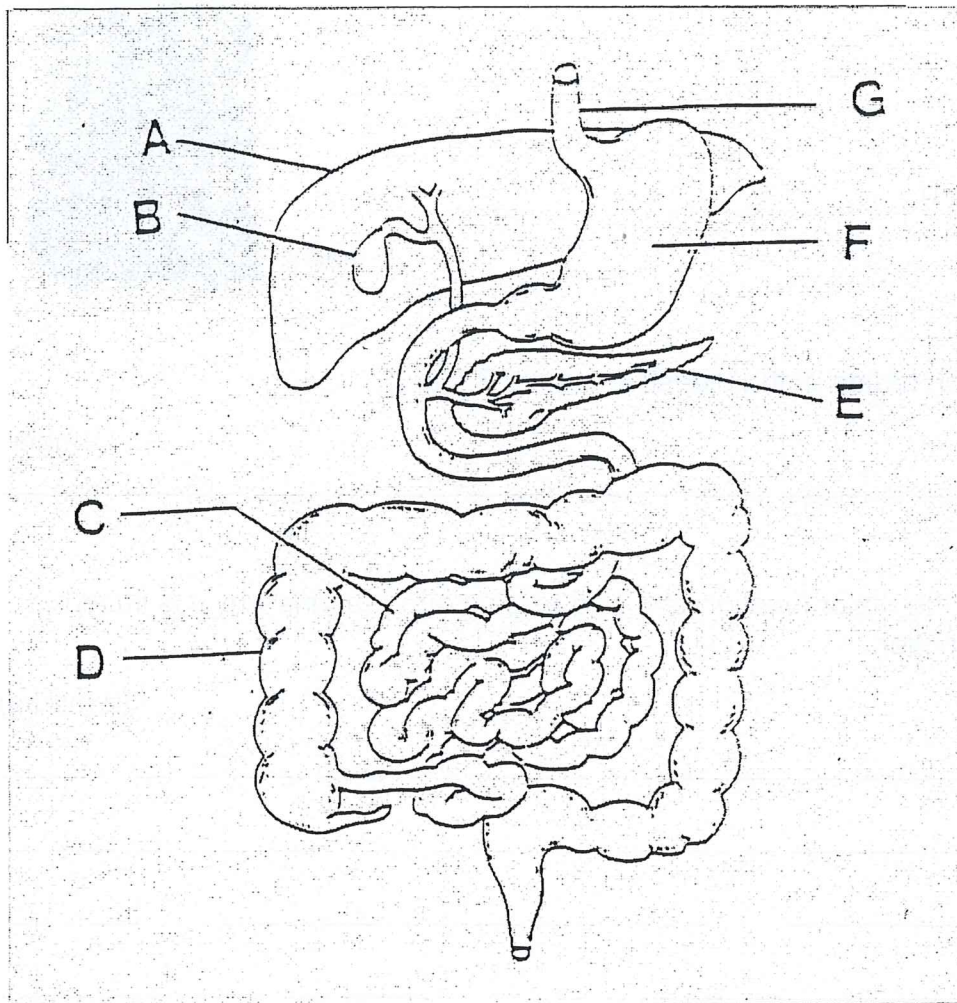

b. Label the following components (3 marks)

B	<u>glomerulus</u>	E	<u>proximal convoluted tubule</u>
G	<u>renal artery</u>	H	<u>loop of Henle</u>
D	<u>capsule</u>	I	<u>collecting duct</u>

c. Describe the process of how the nephron filters the blood (4 marks)

- high pressure in glomerulus
- forces everything / most things except RBC & proteins
- selective re-absorption in
- leftover - urine in collecting duct

Question 12 refers to the diagram below of the digestive tract.

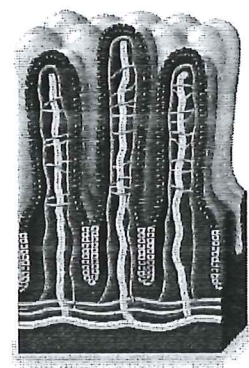

12a Complete the table from the diagram above.

(6 marks)

letter	name	function
A	liver	produces bile
B	gall bladder	stores & releases bile
C	small intestine	absorbs nutrients
D	large intestine	absorbs excess water & salts
E	pancreas	produce pancreatic juices
F	stomach	mechanical & chemical digestion

P

(b) (i) Identify P. villi

(1 mark)

(ii) In which region of the digestive tract is P found?

(1 mark)

small intestine

(iii) Name the major function of P and explain one reasons why it is suited to this function.

(2 marks)

absorb nutrients
large SA

13. List 4 nutrients the body needs

(2 marks)

fats / lipids
vitamins
minerals
carbs
proteins

14. Explain why fibre is needed in the body even though it cannot be digested

(2 marks)

Slows down digestion/
moves through well
↑ nutrient absorption

15. Describe the difference between mechanical and chemical digestion (2 marks)

mechanical - physically breaking
down

chemical - large molecules into
smaller
