How much do drinks stain your teeth?

Design and carry out an experiment to test how much common drinks can stain your teeth. Use the following template to help you.

Background

Our teeth are naturally white (or at least off-white) but over time they can get yellowish stains from our food and drinks. Eggshells have a similar chemical composition to our teeth so we can use them to simulate staining our teeth by leaving them soaking in a drink.

Aim

To determine whether tea, coffee or cola discolours eggshells the most.
