

1. amniocentesis	needle puncture of the amniotic sac to withdraw amniotic fluid for analysis	19. Pre-eclampsia	a condition in pregnancy characterized by high blood pressure, sometimes with fluid retention and proteinuria.
2. amniotic sac	a fluid-filled sac that cushions and protects a developing embryo and fetus in the uterus	20. Prolactin	hormone which stimulates milk production
3. chorionic villus sampling	sampling of placental tissue for microscopic and chemical examination to detect fetal abnormalities	21. rooting reflex	a baby's tendency, when touched on the cheek, to turn toward the touch, open the mouth, and search for the nipple
4. Colostrum	thin, milky fluid secreted by the breast during pregnancy and during the first days after birth before lactation begins	22. second stage of birth	begins when the baby's head starts to move through the cervix and birth canal and ends when the baby completely emerges from the mother's body
5. Doula	A caregiver who provides continuous physical, emotional, and educational support for the mother before, during, and after childbirth.	23. second trimester	tremendous growth occurs, movement begins, the face becomes distinctly human, and the digits elongate
6. embryo	the developing human organism from about 2 weeks after fertilization through to 8 weeks	24. spina bifida	a congenital defect that occurs during early pregnancy when the neural tube fails to develop properly
7. fetus	the developing human organism from 9 weeks after conception to birth	25. stillbirth	Loss of fetus after 20 weeks of pregnancy
8. first stage of birth	"labour", longest stage; contractions, woman's cervix to stretch and open; cervix dilates to 10 cm; takes 6-12 hours	26. sucking reflex	Reflex that causes a newborn to make sucking motions when a finger or nipple is placed in the mouth
9. first trimester	this stage of pregnancy is the most dangerous for the fetus - miscarriages are more common due to important organs developing	27. Tetarogen	any substance that can affect the embryo's development negatively
10. Folic acid deficiency	can cause neural tube defects	28. third stage of birth	delivery of placenta
11. gestational diabetes	diabetes that develops during pregnancy	29. third trimester	rapid growth and brain development continue, and there is transfer of antibodies to the fetus.
12. Lanugo	fine, soft hair, especially that which covers the body and limbs of a human fetus or newborn.	30. Toxoplasmosis	a parasite that is most commonly transmitted from pets to humans by contact with contaminated animal feces (e.g. kitty litter) OR undercooked meat
13. Listeria	causes serious food poisoning by eating contaminated dairy products, especially homemade cheeses and other contaminated foods	31. umbilical cord	a tube containing the blood vessels connecting the fetus and placenta
14. midwife	a woman skilled in aiding the delivery of babies	32. Zygote	the fertilized egg; it enters a 2-week period of rapid cell division and develops into an embryo
15. miscarriage	The death of an embryo or fetus in the first 20 weeks of pregnancy		
16. neural tube	an embryonic structure that gives rise to the central nervous system (includes brain, spinal cord etc)		
17. obstetrician	A doctor who specializes in pregnancy, labor, and delivery		
18. Placenta	An organ that allows the transfer of nutrients, gases and wastes between mother and foetus
