

The Mean (Worded Questions)

- 1). Three children compare their ages. They have a modal age of 9 and a mean age of 11.
How old is each child?
- 2). Sue compares how many televisions three friends have in their houses.
The modal number of televisions is 2 and the mean number of televisions is 3.
How many televisions are there in each house?
- 3). Three adults compare their ages. They have a modal age of 42 and a mean of 36.
How old is each adult?
- 4). John, Betty and Thelma compare the length of their middle fingers.
They find they have a modal length of 6.4 cm and a mean length of 6.7 cm.
What is the length of each of the 3 fingers measured?
- 5). Three people are in a room. They have a median age of 14 and a mean age of 16.
The range of their ages is 8. How old is each person?
- 6). A 100 m race is held. The first three times are noted. The median of these times is 13.4 s
and the mean is 14.2 s. The range between first and third was 5.4 s.
Find the times for each of the first three competitors.
- 7). The height of 3 people is recorded. It is found that the median height is 153 cm and the
mean height is 152 cm. If the range of the heights is 19 cm how tall is each person?
- 8). Three students take a timed test. The median time is 55.4 s and the mean time is 53.8 s.
The range of the times is 10.8 s. Find out how long each student took to complete the test.
- 9). The number of burgers eaten in a week is recorded for 3 pupils.
The mean number of burgers eaten is 4 and the range is 3.
What is the smallest number of burgers eaten by anyone?
- 10). Three pupils find that their mean age is 16 and the range of their ages is 9.
 - a). What is the lowest possible age of the
 - i). youngest child,
 - ii). oldest child?
 - b). What is the highest possible age of the
 - i). youngest child,
 - ii). oldest child?
- 11). In a standing jump competition the top three scores are recorded.
These scores have a mean of 81 cm and a range of 21 cm.
 - a). What is the lowest possible value of the
 - i). shortest jump,
 - ii). longest jump?
 - b). What is the highest possible value of the
 - i). shortest jump,
 - ii). longest jump?
- 12). Three adults compare how many newspapers they have delivered in a month.
The mean number of newspapers delivered is 14 and the range is 18.
 - a). What is the lowest possible value of the
 - i). least newspapers delivered,
 - ii). most newspapers delivered?
 - b). What is the highest possible value of the
 - i). least newspapers delivered,
 - ii). most newspapers delivered?
- 13). In each of the following tables one figure is missing
This figure has been used to calculate the mean for the table. Find the missing figure.

a).

Shoe Size	4	5	6	7	8
Frequency	1	2	4	x	1
Mean = 6					

b).

Weight (kg)	20	21	22	23	24
Frequency	1	x	3	2	2
Mean = 22					

c).

Height (cm)	80	81	82	83	84
Frequency	2	5	x	1	1
Mean = 81.5					

d).

Handspan (cm)	10	11	12	13	14
Frequency	1	4	x	4	2
Mean = 12.1
