

Section I: Multiple choice questions

1. Compared to cold water, warm water:

- moves down away from the surface of the ocean
- is dense.
- is heavy.
- moves up towards the surface of the ocean.

[1 mark]

2. The ocean is becoming more acidic because:

- it is absorbing more atmospheric carbon dioxide.
- deforestation allows more acidic minerals to flow into the water.
- the melting ice caps are full of weak acids.
- fish and marine life are dying and decomposing due to climate change.

[1 mark]

3. What is the name of the part of the hydrosphere that is made up of frozen water?

- icecaps
- icosphere
- permafrost
- cryosphere

[1 mark]

4. The most damaging effect of the permafrost melting would be:

- having nowhere to ski anymore.
- sea levels rising due to the extra water.
- massive changes to the world's tides.
- the release of large amounts of carbon into the atmosphere.

[1 mark]

5. The biosphere is *not* made up of:

- bacteria.
- plants.
- animals.
- asteroids.

[1 mark]

6. In which of Earth's spheres is the most oxygen stored?

- hydrosphere
- atmosphere
- biosphere
- lithosphere

[1 mark]

7. The most common gas in the atmosphere is:

- nitrogen.
- carbon dioxide.
- oxygen.
- hydrogen.

[1 mark]

8. The crust of the Earth is broken into a number of pieces called:

- tectonic plates.
- boundaries.
- continents.
- ridges.

[1 mark]

Section II: Short answer questions

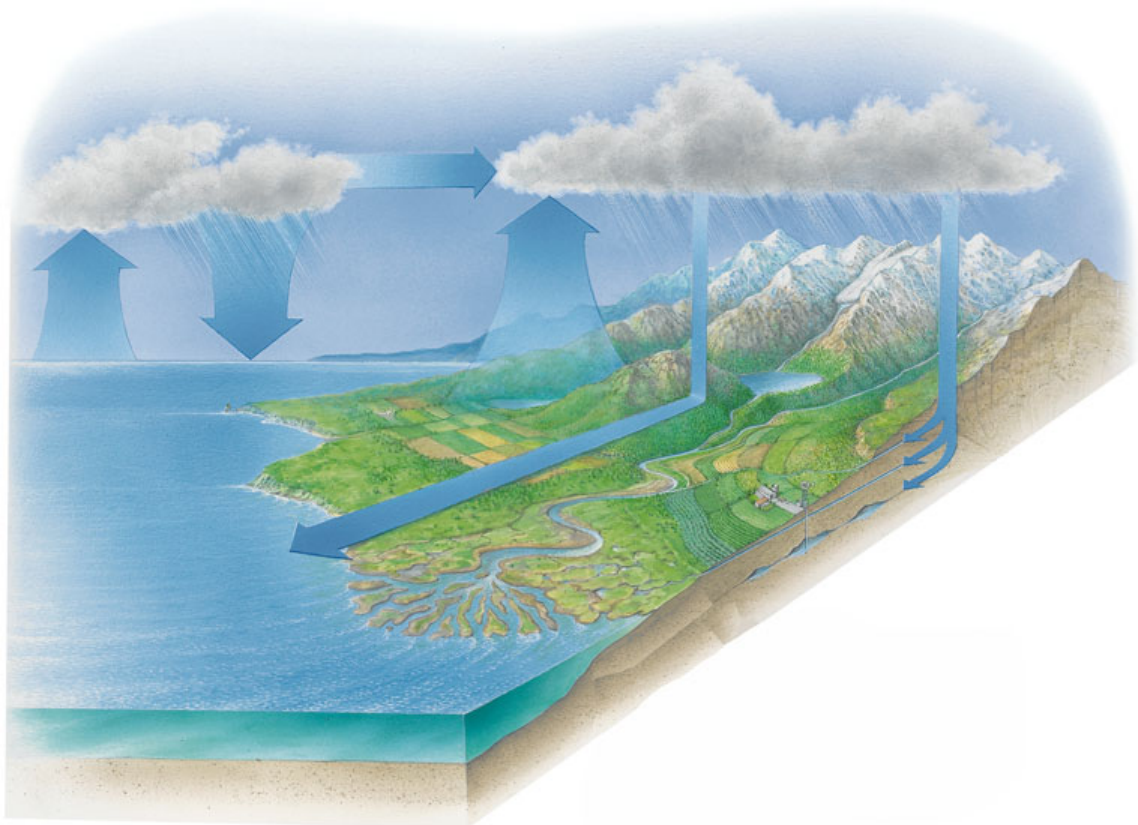

9. What are the Earth's four major spheres?

[2 mark]

10. Give three negative effects of melting sea ice.

[3 mark]

11. Give two ways in which humans have contributed to the enhanced greenhouse effect (2marks)

12. On the diagram above, list the main stages of the water cycle.

[4 marks]
