

Much better Jasper.

W-17

Year 10 Science Physical Sciences Practical Assessment - Distance and Displacement

NAME: Jasper Ford

MARK: $\frac{6\frac{1}{2}}{10}$

Below is a map of the school and its buildings. You need to be able to work out the distance and displacement for the following. You will need to trace onto the diagram.

Equipment: trundle wheel, 50 m tape.

Key-Dark purple, angular orientation
Light purple/Pink: Trigonometric validations proofs
Green: Measured course
Blue displacement.

It is partitioned into portions that of 6 metres

36 metres

Scale

6 metres

17.2 metres

1cm:17.2 m

Distances

1. Doors into Victoria Square to the oval gates.

Distance = 120m

2. Door to Huasahuasi 6 to sliding doors Lyon1.

Distance = 201metres

Scale Determination

- Use the trundle wheel or 50 m tape to measure the length of Victoria Square building along the boulevard side.

Write this onto your map.

- Measure the length of the building on the map accurately with a ruler.

Write this as a scale on the bottom of the map.

e.g. 2.5 cm = 40 m

Displacement

Now use the scale to work out the displacement for each journey.

You will need to draw cross-hairs with compass directions onto the diagram. Don't forget to put a rough direction as a bearing.

1. Doors into Victoria Square to the oval gates.

Displacement = 73 m

Bearing: 196 degrees west

2. Door to Huasahuasi 6 to sliding doors Lyon1.

Displacement = 160m

Bearing: 25 degrees southeast, 115 degrees south
