**Year 10 Science
Physical Sciences
Practical Assessment - Distance and Displacement**

(42x42)=1048
+

(48x48)480

Below is a map of the school and its buildings. You need to be able to work out the distance and displacement for the following. You will need to trace onto the diagram.

1528/39=39
39+49.3=88.3m distance
Equipment: trundle wheel, 50 m tape.

Key-Dark purple, angular
orientation
Light purple/Pink:
Trigonometric validations
proofs
Green: Measured course
Blue displacement.

Distances

- Doors into Victoria Square to the oval gates.

Distance = 88.3 m

- Door to Huasahuasi 6 to sliding doors Lyon1.

Distance = 146m

Scale Determination

Approximation of 900 metres.

9x9x100=81000

- Use the trundle wheel or 50 m tape to measure the length of Victoria Square building along the boulevard side.

137x137=1876

Write this onto your map.

82876/(?x?)=?=287

- Measure the length of the building on the map accurately with a ruler.

Write this as a scale on the bottom of the map.

e.g. 2.5 cm = 40 m

300

70

900

Displacement

210

Now use the scale to work out the displacement for each journey.

210

You will need to draw cross-hairs with compass directions onto the diagram. Don't forget to put a rough direction as a bearing.

- Doors into Victoria Square to the oval gates.

Displacement = 44m

Bearing: 196 degrees west

- Door to Huasahuasi 6 to sliding doors Lyon1.

P

Displacement = 287m

Bearing: 25 degrees southeast, 115 degrees south
