Equipment: trundle wheel, 50 m tape.

$$\frac{5.0}{2.3} \times \frac{41.5}{1} = \underline{88m}$$

Distances

1. Doors into Victoria Square to the oval gates. X

Distance = 114.1

2. Door to Huasahuasi 6 to sliding doors Lyon1.

Distance = 214.2m /

①

Scale Determination

- Use the trundle wheel or 50 m tape to measure the length of Victoria Square building along the boulevard side.

Write this onto your map.

- Measure the length of the building on the map accurately with a ruler.

Write this as a scale on the bottom of the map.

e.g. 2.5 cm = 40 m

Displacement

Now use the scale to work out the displacement for each journey.

You will need to draw cross-hairs with compass directions onto the diagram. Don't forget to put a rough direction as a bearing.

1. Doors into Victoria Square to the oval gates. ✓

Displacement = 90.20m

Bearing: 120°sw X

②

2. Door to Huasahuasi 6 to sliding doors Lyon1.

Displacement = 155.8 X

Bearing: 130° ✓
