

MARK: $8\frac{1}{2}$
10

Equipment: trundle wheel, 50 m tape.

Distances

outside $\pm 10m$

1. Doors into Victoria Square to the oval gates.

Distance = 119m $\frac{1}{2}$

2. Door to Huasahuasi 6 to sliding doors Lyon1.

Distance = 228m ✓

SCALE

$$2.5 \text{ cm} = 41 \text{ m} \quad \checkmark$$

$$1.0 \text{ cm} = \frac{41}{2.5} \text{ cm}$$

$$1.0 \text{ cm} = 16.4 \text{ m} \quad \checkmark$$

Scale Determination

- Use the trundle wheel or 50 m tape to measure the length of Victoria Square building along the boulevard side.

Write this onto your map.

- Measure the length of the building on the map accurately with a ruler.

Write this as a scale on the bottom of the map.

e.g. 2.5 cm = 40 m

Displacement

Now use the scale to work out the displacement for each journey.

You will need to draw cross-hairs with compass directions onto the diagram. Don't forget to put a rough direction as a bearing.

1. Doors into Victoria Square to the oval gates. ✓

Displacement = 98.4m ✓

Bearing: 200°sw ✓

2. Door to Huasahuasi 6 to sliding doors Lyon1. ✓

Displacement = 205m ✓

Bearing: 120°SE ✓
