

## Exercise 11.1 Family Trees

### INTRODUCTION:

When we draw family trees the squares represent males and the circles females. Individuals that show the character under investigation are shaded in.

Carefully study the following family tree that shows the incidence of short eyelashes.

Family Tree—Short Eyelashes

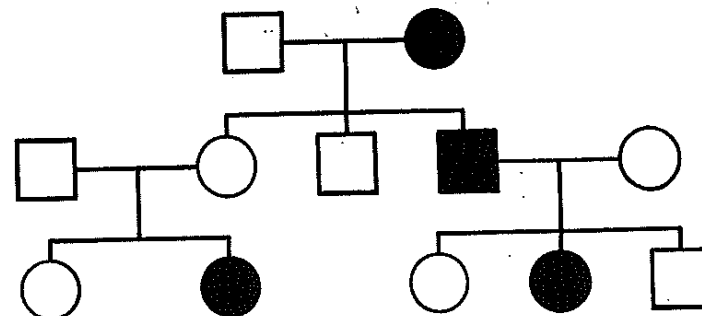

- How many members of this family have short eyelashes? .....  
How do you know? .....
- How many members have long eyelashes? .....  
In the family tree the genotypes are indicated below the squares and circles.
- Do the shaded individuals have homozygous or heterozygous genotypes? .....
- Is short eyelashes a recessive or dominant character? .....
- One male member of the family tree has two possible genotypes. Explain .....

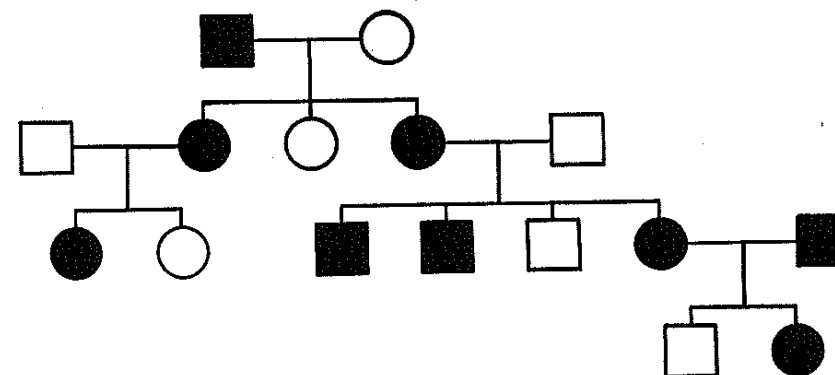

### Procedure:

Carefully study each of the family trees. For each one you are to work out if the character is dominant or recessive and indicate the genotype of each member.

Family Tree: Albinism:

Family Tree: Prominent Nose:

Family Tree: Small Ears:
