

Mitosis

Student: Class:

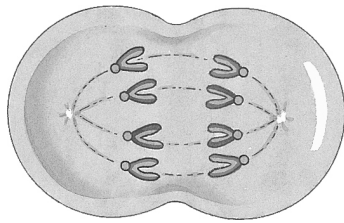

True or false

1. Answer 'true' or 'false' to each of the following statements about mitosis.
- (a) Mitosis occurs in the nucleus of a cell.
 - (b) Mitosis results in the formation of one new cell.
 - (c) Two new and identical cells form as the result of mitosis.
 - (d) New cells contain the same number of chromosomes as the original cell.

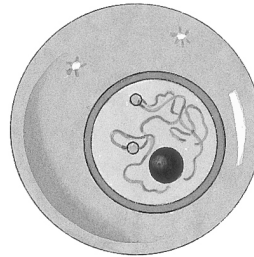

Jumbled stages of mitosis

2. The following drawings show the four stages of mitosis.

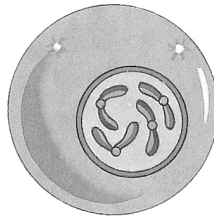

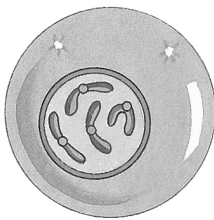

A

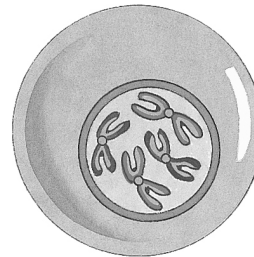

B

C

D

- (a) Arrange these stages in the correct sequence using the code letters.

.....

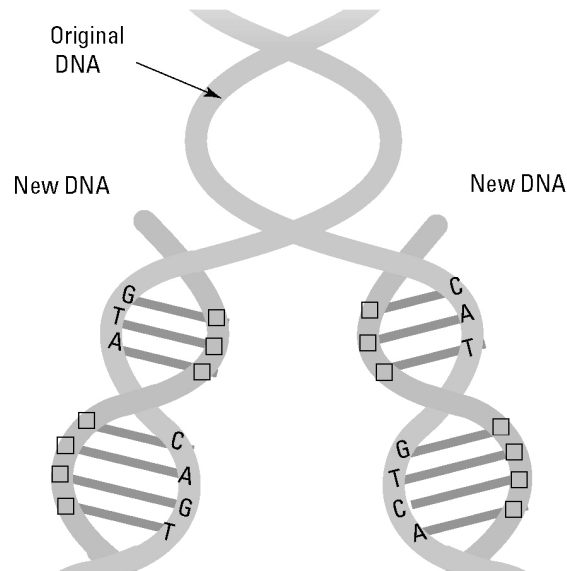

- (b) Explain why the chromosomes in diagram D appear as double stranded.

.....

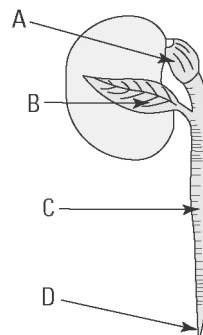

Replication

3. During mitosis the DNA makes a copy of itself.

- (a) Complete the diagram below by inserting the letter of the nitrogen base in the new DNA strand that is forming.

- (b) Identify the region of the pea seedling where cells are undergoing mitosis.

Answer:
