

Chemical patterns:

Summary

Answers

Complete the statements below to compile a summary of this unit. The missing words can be found in the word list below.

- All elements contain only one type ofatom.....
- The central part of the atom is called the ...nucleus..., which consists of particles called ...protons... and ...neutrons... .
- The nucleus is surrounded by a lot of empty space and a cloud of ...electrons... .
- Protons have a ...positive... charge, electrons have a ...negative... charge and neutrons haveno..... charge.
- The classification system used to order the elements is called the ...periodic... table.
- The number of protons in an atom is referred to as the ...atomic... number.
- The number of protons and neutrons in an atom is referred to as the ...mass..... number.
- Isotopes..... are different forms of atoms of the same element. Those of the same element have the same number of protons but a different number of neutrons.
- The ...metalloids... have properties intermediate between that of metals and non-metals.
- The energy levels in which electrons are arranged are calledshells.....
- Atoms that have lost or gained an electron and therefore carry an electric charge are calledions.....
- When electrons are transferred from one atom to another, anionic..... bond forms.
- When electrons are shared between atoms, a ...covalent... bond forms.
- The number of electrons that an atom loses, gains or shares with other atoms is called its ...valency... .
- The shorthand way of writing an element's name is called its ...symbol.....
- The shorthand way of writing a compound's name is called its ...formula.....

periodic	atomic	symbol	mass
protons	nucleus	metalloids	formula
shells	isotopes	valency	no
negative	covalent	neutrons	electrons
ions	atom	positive	ionic
