

Chemical reactions:

Summary

Answers

Complete the statements below to compile a summary of this unit. The missing words can be found in the word list below. Two of the words may be used twice.

1. In a chemical reaction, the atoms of the ...**reactants**..... are rearranged and new bonds are formed. In this way, new chemicals, the ...**products**....., are formed.
2. The Law of Conservation of Mass states that matter can be neither**created**..... nor**destroyed**..... during a chemical reaction.
3. It is important to know the correct ...**formulae**..... of the reactants and products when writing a balanced chemical equation.
4. An**aqueous**..... solution is one in which a substance is dissolved in water.
5. When two aqueous solutions react, a solid ...**precipitate**..... sometimes appears.
6. All compounds containing the sodium ion, the ammonium ion, the**nitrate**..... ion and the ...**potassium**..... ion will dissolve in water.
7. Redox reactions involve the ...**transfer**..... of electrons from one atom, ion or molecule to another.
8. Redox reactions are actually two reactions, **oxidation** and **reduction**, happening simultaneously.
9. In the 'dry' **corrosion** of metal, electrons are transferred from metal atoms to oxygen molecules.
10. A **displacement** reaction occurs when one element displaces another element from a compound.
11. Hydrocarbons are chemicals that contain only ...**hydrogen**..... and ...**carbon**.....
12. When one compound breaks down into two or more simpler chemicals, a **decomposition** reaction has occurred.
13. Magnesium reacts readily with acid, but gold does not. This is due to the different ...**reactivity**..... of the metals.
14. When metals are reacted with hydrochloric acid, ...**hydrogen**..... gas is produced.
15. A**salt**..... is produced when an acid and a base react together in a neutralisation reaction.
16. A base containing the carbonate ion will produce**carbon dioxide**..... as well as a salt and water.
17. A**catalyst**..... is a substance that speeds up a chemical reaction without reacting in the reaction.
18. Amylase is an example of a biological catalyst, or**enzyme**.....
19. The production of light by a chemical reaction is called **chemiluminescence**.

transfer	dioxide	potassium	enzyme
formulae	catalyst	salt	oxidation
products	hydrogen	carbon	reactivity
precipitate	reactants	created	corrosion
displacement	destroyed	decomposition	nitrate
reduction	aqueous	electrons	chemiluminescence
