Class: _____

ACTIVITY SHEET

2.4 Separation challenge

Imagine that you have been given a flask containing a liquid mixture of five different substances: oil, water, alcohol, sugar and salt. Your challenge is to devise a method with the minimum number of steps to end up with separate samples of each component. You are allowed to use the equipment found in a typical school lab. (Hint: Salt will not dissolve in alcohol, but sugar will.)

Describe each step in the appropriate order, identifying any pure substances isolated in that step.

Step 1:

Step 2:

Step 3:
