

Name: _____

Class: _____

ACTIVITY SHEET

2.5 Properties used to separate substances

Not all physical properties of substances are useful for separating the components of mixtures. Complete the following table by filling in the relevant empty cells.

Physical property	Description of physical property	Separation technique(s) utilising that property
	Ability of the substance to be stretched into a wire	
	How readily the substance will dissolve in a given liquid	
	The mass of a given volume of the substance	
	How resistant the solid substance is to being scratched by other solids	
	How readily the substance will conduct electricity	
	The electrical charge on particles of the substance	
	How readily the substance will conduct heat	
	Attraction of a substance within a magnetic field	
	Distinct temperature at which the solid substance turns into a liquid	
	Distinct temperature at which the liquid substance turns into a gas	
	Either a solid, liquid or gas at a room temperature of 20°C	
	Results from particular wavelengths of white light being reflected or transmitted by the substance	
	Ability of the substance to be hammered out into a thin sheet	
	Molecules escaping from the surface of the substance detected by the nose	
	Size of the individual particles making up the substance (not at the atomic level)
