

Name: _____

Class: _____

ACTIVITY SHEET

Chapter 2: Prior knowledge

Decide whether each of the following statements is true or false. If the statement is false, correct it.

- 1 Substances are types of matter. (True / False)

- 2 Substances can be classified as either pure or impure. (True / False)

- 3 Pure substances consist of one particle only. (True / False)

- 4 Impure substances (mixtures) consist of different types of particles mixed up. (True / False)

- 5 Only solids can be mixtures. (True / False)

- 6 A solution is formed when a solid dissolves in a liquid. (True / False)

- 7 When making a solution, the solid is called the solvent and the liquid is called the solute. (True / False)

- 8 Solutions are all mixtures. (True / False)

- 9 All matter is made out of extremely small particles called atoms. (True / False)

- 10 Elements are substances whose particles consist of one type of atom only. (True / False)

- 11 Compounds are substances whose particles consist of different types of atoms bonded together.
(True / False)

- 12** Only elements are classified as pure substances. (True / False)
- 13** Colour, density, hardness, solubility and melting point are physical properties. (True / False)
- 14** Chemical techniques are used to separate the components of mixtures. (True / False)
- 15** Filtration involves separating a dissolved substance from a liquid. (True / False)
- 16** Decanting involves pouring off the liquid part, leaving the solid part behind. (True / False)
- 17** Evaporation involves vaporising the solvent, leaving the solute behind. (True / False)
- 18** Crystallisation involves forming solid crystals from a saturated solution. (True / False)
- 19** Chromatography separates substances based on how fast their particles move. (True / False)
- 20** Distillation involves separating liquids that have different melting points. (True / False)
