

My Pythagoras Interactive Notebook

Name:

Class: 9-9

Term 2 Semester 1

Warm Up

- 1) Evaluate 7^2
- 2) What is the square root of 36?
- 3) What angle is the hypotenuse opposite?
- 4) $3^2 + 4^2 = ?^2$

Using Pythagoras on a graph

EQ – How can I apply Pythagoras' theorem to find the length of a line on a graph?

To find the length of AB I can break this down into the horizontal and vertical components

Using Pythagoras on a graph

EQ – How can I apply Pythagoras' theorem to find the length of a line on a graph?

Put in a new point C and draw a right angle triangle

Using Pythagoras on a graph

EQ – How can I apply Pythagoras' theorem to find the length of a line on a graph?

Now to find the length from A to B (line AB) I can use Pythagoras

Using Pythagoras on a graph

EQ – How can I apply Pythagoras' theorem to find the length of a line on a graph?

Now to find the length from A to B (line AB) I can use Pythagoras

$$\overline{AB}^2 = \overline{AC}^2 + \overline{CB}^2$$

$$\overline{AB}^2 = 3^2 + 2^2$$

$$\overline{AB}^2 = 9 + 4$$

$$\overline{AB}^2 = 13$$

$$\overline{AB} = \sqrt{13} \text{ or } 3.61$$

Using Pythagoras on a graph

EQ – How can I apply Pythagoras' theorem to find the length of a line on a graph?

Now to find the length from A to B (line AB) I can use Pythagoras

$$\begin{aligned}\overline{AB}^2 &= \overline{AC}^2 + \overline{CB}^2 \\ \overline{AB}^2 &= 3^2 + 2^2 \\ \overline{AB}^2 &= 9 + 4 \\ \overline{AB}^2 &= 13 \\ \overline{AB} &= \sqrt{13} \text{ or } 3.61\end{aligned}$$

Complete Ex 7.5 pg 94. Hint: plot each point first!

Notes Review

- 24, 7 ,30
- Date
