Question Sheet: Energy Efficiency

1:19 Do you know where power comes from? If yes, write it down, if no, take a guess.

1:32 They make it in _____

1:42 Every day they burn thousands of tonnes of coal to make high pressure steam to drive turbines to make electricity.

☐

True

☐

False

2:16 Why do we use a model of a power station to understand how they work?

3:06 They are burning gas as a fuel and converting water into a solid.

☐

True

☐

False

3:30 They have converted the energy in the ____ into _____ energy.

3:45 What is the fuel used in a power station?

4:21 How do they get coal powder at the power stations?

4:38 The ____ turns ____ into ____ which travels along pipes to a turbine.

4:48 The ____ rotates a ____ inside the generator.

6:25 They are trying to make the ____ more efficient by stopping heat ____

7:54 How is water recycled in a power plant?

8:43 What do you see coming out of the cooling towers?

9:28 What do you think is the most efficient way of powering a go cart - petrol or electricity?

12:04 The electric go-cart is more efficient.

☐

True

☐

False

13:00 Nicole's Go-Cart wasted more heat.

☐

True

☐

False

13:09 Are electric vehicles really more efficient? How is the electricity produced in the first place?

16:02 Will the kettle be more or less efficient?

18:48 Give 3 examples of renewable energy mentioned at the end of the video.
