Question Sheet: Six Questions on Forms of Energy

2:35 The Sun is the ultimate source of all energy.

True

False

3:54 Kinetic energy is:

able to be created by movement

increased by speed

similar for a car and bike

unable to be transferred

4:58 Potential energy is also known as _____ energy.

7:19 Three important types of kinetic energy are: electrical, radiant, and sound energy. For each of these types, briefly describe what makes them kinetic energy (e.g. what is moving) and provide an example.

--

10:33 Potential energy is a type of energy based on an object's position relative to other objects. Choose examples of potential energy from the following list:

☐

A moving train

☐

A stretched slingshot

☐

Gas in a barbecue gas bottle

☐

Water at the top of a waterfall

12:07 Use an online diagram creator, app or paper to draw a flow diagram showing the transformation of energy in everyday situations eg. musical instruments, mobile phones, or transport. Label your diagram, print a copy if using a digital program such as the one listed below, and present it to your teacher.
